Objectives & Investment Policy

- The fund aims to provide investors with a total return, taking into account both capital and income returns, which reflects, before fees and expenses, the return of the Fidelity Global Quality Income Index (the "Index").
- The Index is designed to reflect the performance of stocks of large and mid-capitalisation dividend paying companies from developed countries that exhibit quality fundamental characteristics.
- The Index comprises the equity securities of the relevant companies. The Index constituents are also screened according to fundamental measures as well as certain environmental, social and governance ("ESG") exclusionary criteria based on norm-based screening and negative screening of certain sectors, companies or practices. For more information on the Index, please refer to the publicly available index methodology at www.spdji.com.
- The investment policy of the fund is to track the performance of the Index as closely as possible, regardless of whether the Index level rises or falls, while seeking to minimise as far as possible the tracking error between the fund's performance and that of the Index.
- The fund will aim to replicate the Index by holding all of the Index securities in a similar proportion to their weighting in the Index.
- The securities in which the fund invests will be primarily listed or traded on recognised markets globally in accordance with the limits set out in the UCITS Regulations.
- The fund may use derivatives for efficient portfolio management. The fund will use forward currency contracts for hedging purposes.
- The fund uses a benchmark "index tracking" (also known as "passive") investment management approach by tracking the Index.
- Income in the fund will be distributed in accordance with the terms of supplement.
- You can buy and sell shares in the fund on any day the banks in London are open.

For full details of the objectives and investment policy please refer to the prospectus and relevant supplement.

Risk and Reward Profile

- Historical data may not be a reliable indication for the future.
- The risk category shown is not guaranteed and may change over time.
- The lowest category does not mean a "risk free" investment.
- The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the unit class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.
- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The fund may invest in instruments denominated in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the value of your investment.
- Currency hedging may be used which aims to reduce the effect of such changes. However, the effects may not be completely eliminated to the degree expected.

For full details of the relevant risks reference should be made of the risk sections of the prospectus and relevant supplement.
