2024 HALF YEAR HIGHLIGHTS

CASH GENERATION

£29.2M SIX MONTHS ENDED 30 JUNE 2023: £21.8M

COMMERCIAL CASH GENERATION²

The opening half of 2024 has been another period of strong cash generation for the group. Group cash generation of £19.6m (six months ended 30 June 2023: £10.6m) allows for the short-term requirement to hold additional equity risk capital (£9.3m) as defined by the Solvency II symmetric adjustment (SA).

Commercial cash generation looks through the SA impact and is deemed to better reflect the underlying business performance. Commercial cash of £29.2m, supported by strong divisional contributions, demonstrates the group's continued ability to deliver cash generation through a wide variety of market conditions. (i) Financial review p28

SOLVENCY

201% 31 DECEMBER 2023: 205% **GROUP SOLVENCY**

The group's solvency has reduced slightly since the start of the year remaining well above our normal operating range of 140-160%. The ratio does not include any temporary impacts from either transitional benefits or a positive closing SA position. The solvency position continues to provide substantial headroom for future acquisitions, while all operating divisions remain well in excess of risk appetite levels.

(i) Capital management p23

FuM

£11.9_{BN} 31 DECEMBER 2023: £11.5BN FUNDS UNDER MANAGEMENT³

FuM have increased by c4% since the start of the year, reflecting positive investment returns on our existing business during the period. (i) Financial statements p44

ECONOMIC VALUE

£508.0_M 31 DECEMBER 2023: £524.7M ECONOMIC VALUE⁴

£20.2M SIX MONTHS ENDED 30 JUNE 2023: £32.6M

ECONOMIC VALUE EARNINGS5

EcV earnings of £20.2m have been offset by the impact of dividend payments (£23.5m) and foreign exchange consolidation impacts (£13.3m). Investment returns have provided the most material contribution to the EcV earnings, with new business also contributing positively. (1) Financial review p26

£4.9M SIX MONTHS ENDED 30 JUNE 2023: £6.3M

COMMERCIAL NEW BUSINESS PROFIT⁶

Commercial new business profits continue to be a positive source of value growth. Whilst the Swedish market remains competitive, we have seen margins stabilise, with strong flows into our occupational pensions and custodian offerings. In the Netherlands, new business volumes from our term assurance offerings have remained suppressed, while the UK division has continued to contribute new business, primarily through its intermediated onshore bond proposition since the acquisition of CASLP in 2022.

(i) Business review pages 15 to 20

IFRS

£13.4M SIX MONTHS ENDED 30 JUNE 2023: £15.3M*

IFRS PRE-TAX PROFIT

IFRS pre-tax profits are boosted by positive investment returns in the period and the continued steady release of the contractual service margin (CSM). (i) Financial review p32

£29.3M SIX MONTHS ENDED 30 JUNE 2023: £21.2M GAIN*

IFRS CAPITAL BASE DECREASE

The IFRS Capital Base has decreased in the period, largely due to dividend payments. The movement in the prior year was impacted by additional CSM arising from acquisitions. (i) Financial review p32

The adoption of IFRS 17 provides some more insight into the future profits that are expected to emerge from the group's life insurance business. However, the accounting standard does not include the group's significant amount of policies that are classified as investment contracts, which also represent a future profit stream for the business. As a result, whilst IFRS 17 does provide some level of alignment with the valuation regime of Solvency II, it does not replace it and therefore the group continues to also focus on Solvency II and its derivative KPIs of Economic Value and cash generation in assessing the performance of the business.

^{*2023} IFRS comparatives have been restated from those previously reported – see the IFRS financial statements section for further information

INTERIM DIVIDEND INCREASED FOR THE 20TH CONSECUTIVE YEAR

PROPOSED INTERIM DIVIDEND INCREASED BY 3%

Increase in the interim dividend for the year of 3% to 8.61p per share (2023: 8.36p interim), supported by continued commercial cash generation from our divisions and strong, resilient capital position. Our 20 year dividend growth track record is unrivalled across UK and European listed insurers with Chesnara one of only seven companies across the main UK, French, German, Dutch and Swedish exchanges to raise their dividend every year for 20 years, with c£489m of cumulative dividends paid to our shareholders over the period.

ECONOMIC BACKDROP

INVESTMENT MARKET GROWTH BUT VOLATILITY REMAINS

The opening half of 2024 has been a period of economic growth with positive market movements supporting an increase in FuM and cash generation. It was also another period of sterling appreciation (versus both the euro and Swedish krona), in which our FX hedge continued to protect against the full force of adverse foreign exchange impacts on the translation of our overseas divisional results.

OPERATIONAL DELIVERY

NEW GROUP CFO APPOINTED, BUSINESS INTEGRATIONS & CONSUMER DUTY PROGRESS

In April, Chesnara strengthened the group leadership team with Tom Howard joining as Group CFO, bringing a wealth of experience having held a variety of senior roles at Aviva. Tom's track record and capabilities further strengthen the group's ability to deliver its ambitious plans for the future. He also joined the plc board.

The Part VII transfer of the Canada Life protection portfolio (acquired in 2023) and the migration of the majority of the UK division's business to a new outsourcing partner (SS&C), continue to move forward positively, with expected completion dates in early 2025 and late 2025 respectively.

The UK also successfully complied with the Consumer Duty requirements for closed books, meeting the 31 July 2024 regulatory deadline. While in the Netherlands, Scildon's IT system improvement project has progressed and nears completion, with cost efficiencies already materialising. And, in Sweden, Movestic has strengthened its digital platform and connectivity with distribution partners, to deliver a smoother transfer experience for customers.

SUSTAINABILITY

WE ARE COMMITTED TO BECOMING A SUSTAINABLE CHESNARA

We continue to work to transition the group into a sustainable business. We are committed to delivering against our three key targets: to be a net zero emitter; to invest in positive solutions; and to be an inclusive place for all stakeholders. We reported on our progress against these in our Annual Sustainability Report issued in March and have taken further steps since, including starting the production of our climate transition plan under the IIGCC's Net Zero Investment Framework and delivering the first part of our group-wide sustainability training. In the UK, we have also signed up to the UK Sustainable Investment & Finance Association (UKSIF), the Finance for Biodiversity Pledge and became a signatory of the PRI (Principles for Responsible Investment). Work is also underway on our wider transition plans.

Notes

Items 1 to 6 below are Alternative Performance Measures (APMs) used by the group to supplement the required statutory disclosures under IFRS and Solvency II, providing additional information to enhance the understanding of financial performance. Further information on these APMs can be found throughout the Financial Review and in the APM appendix on pages 72 and 73.

- 1. Group cash generation represents the surplus cash that the group has generated in the period. Cash generation is largely a function of the movement in the solvency position, used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed.
- 2. Commercial cash generation is used as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed. It excludes the impact of technical adjustments, modelling changes and corporate acquisition activity; representing the group's view of the commercial cash generated by the business.
- 3. Funds Under Management (FuM) represents the sum of all financial assets on the IFRS balance sheet.
- 4. Economic Value (EcV) is a financial metric derived from Solvency II. It provides a market consistent assessment of the value of existing insurance businesses, plus adjusted net asset value of the non-insurance business within the group.
- 5. Economic Value earnings are a measure of the value generated in the period, recognising the longer-term nature of the group's insurance and investment contracts.
- 6. Commercial new business represents the best estimate of cash flows expected to emerge from new business written in the period. It is deemed to be a more commercially relevant and market consistent measurement of the value generated through the writing of new business, in comparison to the restrictions imposed under the Solvency II regime.

CHAIR'S STATEMENT

THE GROUP HAS **DELIVERED A STRONG SET OF RESULTS** AND CONTINUES TO BENEFIT FROM A ROBUST AND RESILIENT CAPITAL POSITION. THIS HAS SUPPORTED AN INCREASE IN THE INTERIM DIVIDEND FOR THE 20TH CONSECUTIVE YEAR WHILST MAINTAINING SIGNIFICANT RESOURCES TO TRANSACT FUTURE M&A OPPORTUNITIES.

LUKE SAVAGE, CHAIR

20 years of dividend growth

The first half of 2024 saw a continuation of Chesnara's strong record of delivering cash generation with all of our operating divisions contributing to commercial cash generation of £29.2m for the period, significantly higher than in the same period in 2023 (£21.8m).

As a result, I am pleased to report that our shareholders will receive an interim dividend of 8.61p per share, an increase of 3% on the prior year, and the 20th consecutive year that we have increased the dividend. This track record puts us in a unique group of only seven companies (according to RBC research) across the main European listed exchanges of UK, France, Germany, the Netherlands and Sweden to have increased their dividend for 20 years or more.

We continue to ensure that we have a broad range of skills and capabilities on our boards. In April, we announced Mark Hesketh's appointment as Chair of our UK board, Countrywide Assured plc. And at the AGM, we formally appointed Tom Howard (Group CFO) to the group board. It was also pleasing to see strong shareholder support for all resolutions tabled at this year's Annual General Meeting in May.

Financial stability remains at the heart of the Chesnara business and its financial model and is fundamental to providing financial security to our customers.

Our Solvency II ratio of 201% is significantly above our normal operating range of 140%-160%, continuing to provide us with considerable strategic flexibility.

Our solvency position remains underpinned by a well-diversified business model, a focus on responsible risk-based management and resilient and reliable cash flows from our businesses.

A robust and resilient capital position is also a critical factor in the investment case for both our equity and debt investors and it also provides us with the solvency headroom required to take advantage of attractive M&A opportunities as they arise.

Operational delivery

Across the group, our people continue to deliver strongly against our key strategic priorities. Last year we announced the acquisition of a protection portfolio in the UK from Canada Life. The planned transfer of this portfolio in the UK is on track to complete in Q1 2025 (subject to approval by the High Court of Justice of England and Wales) and the operational activities to transfer existing Chesnara UK insurance portfolios to our new outsource partner SS&C are progressing well.

In Sweden, the Movestic team's ongoing focus on digitisation and efficiency has been a crucial factor in winning new partnership deals and supporting healthy new business sales in a competitive market.

And, in the Netherlands, the delivery of material IT projects in Scildon and further bedding in of our new Waard operating model, post the acquisitions of Robein Leven and an insurance portfolio from Conservatrix, are notable highlights.

I'm also pleased to say that the process of fully embedding the IFRS 17 accounting regime has been successful and is a testament to the huge effort and commitment made by many of our people across the group.

CHAIR'S STATEMENT (CONTINUED)

Purpose

At Chesnara, we help protect customers and their dependants by providing life, health, and disability cover or savings and pensions solutions to meet future financial needs. These are very often customers that have come to us through acquisition, and we are committed to ensuring that they remain positively supported by us.

We have always managed our business in a responsible way and have a strong sense of acting in a fair manner, giving full regard to the relative interests of all stakeholders.

Strong financial performance will always remain of key importance for many reasons. These include our desire to offer competitive returns to shareholders and fund our debt investor coupon payments but also because it creates financial stability for customers. However, we continue to be very conscious of the need for the business to serve a wider purpose with an increasing balance of focus across the 3Ps: Profit, People and Planet.

Over recent years we have increased our focus on our sustainability agenda, and I continue to be impressed with the level of engagement in this area from all levels of the group.

The group-wide sustainability programme is progressing well against its long-term objectives. We are working to embed sustainability into decision making at all levels of the group by placing environmental, social and governance (ESG) considerations at the heart of our internal governance processes and by introducing mandatory sustainability training for all colleagues as part of their learning journey.

We continue to develop our plans to deliver a just transition to net-zero, and to develop our understanding of the actions we need to take to integrate nature into our decision making processes.

OUR 20 YEAR DIVIDEND GROWTH TRACK RECORD IS UNRIVALLED ACROSS UK AND EUROPEAN LISTED INSURERS.*

I am also pleased to report that Chesnara is now a signatory to the Principles for Responsible Investment. This is another step forwards in our sustainability journey and complements our existing memberships of the United Nations Global Compact, UK Sustainable Investment and Finance Association and the Institutional Investors Group on Climate Change, to name but a few.

We continue to build objectives that are a balance of items that create solid foundations for longer-term change together with shorter-term actions that will begin to make a real-world positive impact.

Our financial results over the first half of 2024 demonstrate that the sources of value from the components of the 'Chesnara fan' (a diagrammatic illustration of value growth sources, see page 10) remain robust and will continue to be a reliable source of value from our in-force book into the future.

In addition, the outlook for acquisitions remains positive and our strong, resilient capital and cash positions mean that we are well-placed to benefit from inorganic opportunities as they arise.

Luke Savage Chair

9 September 2024

†Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report. *Verified by research from RBC Capital Markets.

CHIEF EXECUTIVE OFFICER'S REPORT

IN H1, THE GROUP HAS AGAIN GENERATED EcV EARNINGS AND DELIVERED STRONG CASH GENERATION, OUR PEOPLE HAVE CONTINUED TO DELIVER ON OUR MAJOR OPERATION PROGRAMMES AND OUR M&A PIPELINE REMAINS POSITIVE.

STEVE MURRAY, CEO

Introduction & results

The first half of 2024 has been another period of good execution against our renewed strategy, which continues to focus on:

- 1. Running in-force insurance and pensions books efficiently and effectively;
- 2. Seeking out and delivering value enhancing M&A opportunities; and
- 3. Writing focused, profitable new business where we are satisfied an appropriate return can be made.

We have c1 million customers across Chesnara and our people take pride in the responsibility that comes with delivering for them every single day.

We have an ambitious change agenda underway across the group.

There has been a strong cross-business effort to ensure we successfully met the requirements of the new Consumer Duty regulations for closed books by the deadline of 31 July this year. This follows the successful implementation of the Consumer Duty regulations for open books last year. Chesnara remains fully supportive of the Duty and has been reassured throughout the process that the work completed several years ago to support long-standing customers has provided strong foundations to deliver the good outcomes and value for money that underpin the Duty. There has been a small provision sustained from last year's full accounts where we acknowledged there were some changes that would improve the outcomes for a small segment of customers. We have confidence in the fully funded implementation plan that will roll out the further recommendations approved by the board to support the Duty.

Work is continuing at pace to migrate the majority of our UK policies to our new operating platform with SS&C. In his Chair's Statement, Luke highlighted the positive progress we are making with regards to the planned transfer and migration of the UK protection book we recently acquired from Canada Life. We continue to believe that the partnership with SS&C will be a key enabler for the UK business to continue to deliver quality and cost effective servicing, with the capacity and flexibility to support continued M&A developments in the UK where we see good opportunities.

In Scildon, a significant programme of work is now largely complete which was focused on improving the efficiency and usability of our Individual Life platform. In Waard, the work has continued to embed the new Target Operating Model (TOM) for the enlarged business following the acquisitions of Robein Leven and the insurance portfolio from Conservatrix. And, for Sweden, we have seen the benefits of the work that the Movestic team has executed to enhance the quality of our offering for distribution partners with strong new business flows over the period.

As Luke also mentions, our group-wide sustainability programme is progressing well and we announced new initial interim targets for financed emissions. We are committed to a 50% reduction by 2030 in our scope 1 and 2 financed emissions investments that are within our control or influence, which represents a material component of our assets under management.

We are committed to work with partners and customers for those assets where we have less control or influence; for example, those where policyholders self-select their own investments. We also remain strongly committed to net zero by 2050 for all our financed emissions and so our targets will expand over time to include all asset classes.

Work has also begun on our transition plans which will help us in identifying the more detailed actions we will take to tackle all our financed emissions and will also factor in how we manage a just transition which considers the needs of all stakeholders, including nature and biodiversity.

COMMERCIAL CASH GENERATION OF £29.2M EXCEEDS THE INTERIM DIVIDEND AND OTHER CENTRAL COSTS.

CHIEF EXECUTIVE OFFICER'S REPORT (CONTINUED)

We have also been more actively engaging with a number of the agencies that provide sustainability related ratings to ensure we understand their methodologies and approaches better.

On M&A, we've continued to see a positive pipeline of opportunities across the UK and Europe. Our teams have evaluated multiple opportunities over the first half of the year, and this has included the performance of due diligence on a number of portfolios and legal negotiation in relation to some, albeit not to conclusion. We continue to materially invest in the support of our M&A activity, remaining very active in our pursuit of opportunities and will maintain our discipline and patience when executing.

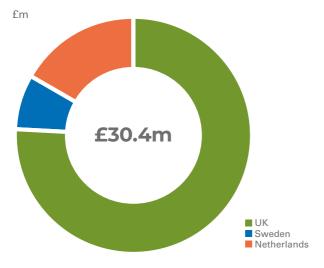

On new business, Movestic has had a strong first half across both its unit-linked and custodian propositions, with overall new business levels higher than the first half of 2023. It's been a tougher market in the Netherlands for our main term life product with overall new business lower compared to the same period in 2023. It has been pleasing to see the team maintain their disciplined approach to pricing against this more challenging market backdrop. In the UK, post the acquisition of CASLP (formerly Sanlam Life & Pensions UK), we have continued to see positive flows into our intermediated onshore bond proposition.

Tom Howard joined us from Aviva in April. Tom has held a variety of senior roles within Aviva plc, including Director of Mergers & Acquisitions for Aviva Group and CFO for Aviva's Life and General Insurance business in Ireland. Tom brings with him an extensive European actuarial and financial reporting background and we're already seeing the benefits of his experience and skill across both our M&A activity and as part of the H1 reporting process.

Looking at our financial results, we have again shown strong cash generation in this period, with commercial cash generation of £29.2m providing coverage of the interim dividend, T2 debt servicing, and the working capital costs over H1

We undertook no material management actions during the period with cash generation driven by positive economics and operating performance. We note the potential for EIOPA's Solvency II reforms to support further cash generation e.g. if the risk margin is reformed in the way we have seen in the UK. We will keep investors updated as these reforms become more certain.

Divisional commercial cash generation by territory^a:

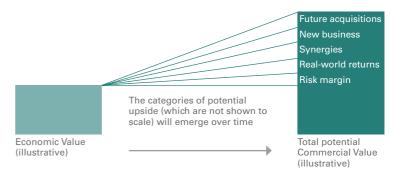

The Chesnara parent company cash (including holding companies) and instant access liquidity fund balance stood at £88m at 30 June 2024. After allowing for our planned divisional dividend receipts of £49m the adjusted balance of £137m is £13m higher than our opening balance (31 Dec 2023 £124m). This provides us with substantial resources to finance future acquisitions, sustainably fund the group dividend and service our Tier 2 debt. The group recently renegotiated its Revolving Credit Facility with £150m of capacity available. And shareholders also supported our AGM resolution allowing us to issue RT1 instruments up to an amount equal to one third of our issued ordinary share capital (c£120m). This provides us with even greater potential firepower.

Looking forward, we continue to have a strong line of sight to future cash generation over the medium and longer term from the unwind of risk margin and SCR, investment returns above risk-free rates, wider synergies and management actions. And that's before further potential benefits from new business and further acquisitions.

The long-term outlook for growth remains positive, particularly through M&A

Before allowing for the prior-year dividend and FX impacts, the group generated Economic Value earnings of £20.2m (vs £32.6m for the first half of 2023 and adjusting for the impact of acquisitions in the period) and we saw components of the 'Chesnara fan' growth model deliver positively in the period. The 'Chesnara fan' illustrates the additional areas of growth potential the group may benefit from that aren't fully reflected in our Economic Value[†] metric.

We have previously highlighted that over the medium term, we expect all components of the growth model to be positive, although there can be a level of shorter-term volatility in each element.

Although there are limitations to tracking the growth metrics over short time periods, it remains useful to assess how the results for the period mapped against the value growth components of the 'Chesnara fan'.

A key element of the growth model is real-world investment returns. The reported EcV of the group assumes risk-free returns on shareholder and policyholder assets. Given the direct link to external market performance this source of value tends to be the most volatile of the growth sources. During the period, real-world returns added cf32m to EcV.

Over time, we expect improvements to operational effectiveness to be a source of value creation, be that through M&A synergies, scale benefits or other positive management actions (such as our recently announced partnership with SS&C). This period saw growth resulting from commercial new business profits of £4.9m.

It's worth noting that further value growth expectations from M&A are often not recognised in the day one gains.

We have also grown our Funds Under Management (FuM)† in the period, through the addition of new business and growth in underlying asset values.

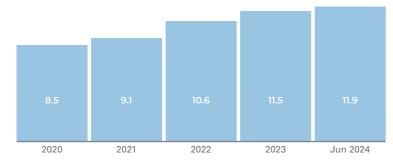

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

^AExcluding FX consolidation impacts.

CHIEF EXECUTIVE OFFICER'S REPORT (CONTINUED)

Growth in FuM[†] Funds Under Management

£bn

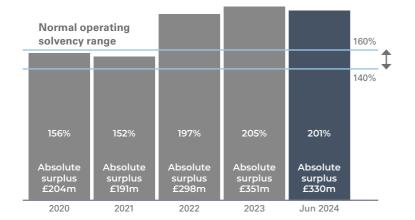

Robust and resilient solvency

Group solvency has remained robust at 201%, materially above the normal operating range we have disclosed to investors of 140-160%. And our divisions have generated a positive operating surplus over the period. It's worth reminding investors that the solvency ratio does not adopt any of the temporary benefits available from Solvency II transitional arrangements, although we do apply the Volatility Adjustment in our UK and Dutch divisions. The ratio does include the benefit of the capital efficiencies relating to the Tier 2 debt raised in 2022.

We expect to utilise this additional capital surplus as we undertake acquisitions, which should result in the ratio reverting back to within the robust and stable 140%-160% normal range.

Our strong cash generation and solvency position has meant that we have yet again grown the interim dividend, this year by 3%. This growth rate is now back above short and long-term rates of inflation and, as Luke highlighted, is the 20th consecutive year of interim dividend growth. This is a track record that we are very proud of and one that is almost unrivalled amongst our UK and European listed peers.

Outlook

It has been pleasing to see continued strong cash and economic earnings generation. Whilst a volatile macro-economic backdrop will continue to be a material factor in all our markets, we remain confident that the Chesnara business model will continue to generate cash across a wide variety of market conditions, as it has done over its history.

We also remain positive on the outlook for further M&A where we remain active and continue to see a positive pipeline of opportunities.

Our people have continued to deliver across a number of material operational programmes and for our customers in the period. I thank them again for their efforts

We celebrated our 20th anniversary in May and increasing our interim dividend for the 20th consecutive year places us in a very small group of companies to have this track record. I look forward to continuing to deliver for our investors and continue to believe there is a lot to look forward to here at Chesnara.

16-

BUSINESS REVIEW UK

The UK division consists of the operating company Countrywide Assured plc. It is largely closed to new business and therefore largely grows through investment returns, positive demographic experience, strong cost control and periodic acquisitions. The UK division has continued to write onshore bond business following the acquisition of CASLP.

BACKGROUND INFORMATION

INITIATIVES & PROGRESS IN 2024

CAPITAL & VALUE MANAGEMENT

As a largely closed book, the division creates value through managing the following key value drivers: expenses; policy attrition; investment returns; and reinsurance strategy.

In general, surplus regulatory capital emerges as the book runs off. The level of required capital is closely linked to the level of risk to which the division is exposed. Management's risk-based decision making process seeks to continually manage and monitor the balance of making value enhancing decisions whilst maintaining a risk profile in line with the board's risk appetite.

At the heart of maintaining value is ensuring that the division is governed well from a regulatory and customer perspective.

- In the first half of the year, financial markets had a positive impact on the value growth of the UK division, through rising yields and growth of policyholder funds.
- Work has progressed on the transition to the long-term strategic partnership with Fin Tech market leader, SS&C Technologies. SS&C will service the front-to-back-office operations for the majority of the UK division, providing a modern platform that will improve the efficiency of the existing business and establishes a solid platform to scale the business via future acquisitions
- The programme of works included in this transformation and transition project is significant and is expected to conclude in 2025.
- The division has continued to support the group's acquisition strategy by assessing M&A opportunities and processes, including due diligence activity, as appropriate.
- The UK business settled its year end 2023 proposed dividend of £35.0m to Chesnara plc in early July, and is reporting a closing post-dividend solvency ratio of 171%.
- The division generated new business which contributed £1.0m (on a commercial new business basis) to EcV in the first half of the year, primarily from the onshore bond that is open to new business via third party investment platforms.

CUSTOMER OUTCOMES

Delivering good customer outcomes is one of our primary responsibilities. We strive to do this by providing good customer service, competitive fund performance and offering overall fair value for money. We seek to offer additional support to customers who may need it and provide easy to understand information about our products and the benefits provided. We are committed to meeting our regulatory responsibilities, including remaining operationally resilient and maintaining a strong solvency position.

- An ongoing focus of the division is to ensure that it complies with the requirements of the FCA's 'Consumer Duty'. The business unit met the requirements in relation to its open business by the regulatory deadline of 31 July 2023 and the closed-book operations achieved compliance with the requirements needed by the deadline of 31 July 2024.
- Another important multi-year focus is to ensure compliance with the FCA's 'Operational Resilience' regulations by 31 March 2025. This remains on track and has included supporting the PRA in its industry-wide data collection programme.
- The partnership with SS&C is expected to benefit customers through an improved service experience.

GOVERNANCE

Maintaining effective governance and a constructive relationship with regulators underpins the successful delivery of the division's strategic plans.

Having robust governance processes provides management with a platform to deliver the other aspects of the business strategy. As a result, a significant proportion of management's time and attention continues to be focused on ensuring that both the existing governance processes, coupled with future developments, are delivered.

- The division has supported the wider group's sustainability programme over the first half of the year and will continue to focus on local initiatives, including supporting staff with volunteering opportunities. Recently, it has also become a signatory of the PRI (Principles of Responsible Investment).
- David Brand retired as a director and as Chair of CA in March 2024. Mark Hesketh, who was already a non-executive director of CA, was appointed as Chair in April 2024.
- The division is focused on ensuring that its governance and oversight routines adapt to reflect the changes taking place in the business, from the partnership to SS&C to the planned Part VII of the Canada Life portfolio.
- CA has maintained oversight of its investment managers, holding regular meetings with fund managers and ensuring asset allocations are in line with its strategic objectives, including review of sustainability metrics.

BUSINESS REVIEW SWEDEN

Our Swedish division consists of Movestic, a life and pensions business which is open to new business. It offers personalised unit-linked pension and savings solutions through brokers, together with custodian products via a number of private banks and is well regarded within both communities.

BACKGROUND INFORMATION

INITIATIVES & PROGRESS IN 2024

CAPITAL & VALUE MANAGEMENT

Movestic creates value predominantly by generating growth in unit-linked Funds Under Management[†] (FuM), whilst ensuring a high-quality customer proposition and maintaining an efficient operating model. FuM growth is dependent upon positive client cash flows and positive investment performance. Capital surplus is a factor of both the value and capital requirements and hence surplus can also be optimised by effective management

- Financial market development has been positive in the first half of the year, which is reflected in the favourable returns on policyholders' investment assets.
- During 2024, transfer activity increased with an effect on both inward and outward transfer flows, though the level of transfers out is not expected to remain at this level in the long term. Movestic has intensified its retention initiatives during the period.
- Strong inflows in both the unit-linked and the custodian areas exceed the prior year and has resulted in overall positive net client cash flow despite the strain from continued outflows
- Movestic's solvency ratio remains strong at 142% (pre-dividend: 148%).

CUSTOMER OUTCOMES

Movestic provides personalised long-term savings, insurance policies and occupational pensions for individuals and business owners. We believe that recurring independent financial advice increases the likelihood of a solid and well-planned financial status, hence we are offering our products and services through advisors, licenced brokers and private banks.

- During 2024, the Swedish business has continued to expand its custodian offering by establishing new partnerships.
- To help customers plan their retirement, Movestic has developed a unique digital service where customers can plan, start withdrawing and change how they receive their occupational pension. An updated version was launched in 2024 which enables customers with several years until retirement to start planning for their withdrawal.
- A new digital service that helps customers explore whether a salary sacrifice pension is right for them was launched on the company website.
- Further automation and a new customer service system have enabled smoother administration as well as improved customer service. During the first half of 2024, the digital process for receiving customer enquiries also went through an improvement process.
- Movestic has further strengthened its digital platform and connectivity with distribution partners, to deliver a smoother transfer experience for customers, via new technological capacity through APIs to partners within the custodian offering.

GOVERNANCE

Movestic operates to exacting regulatory standards and adopts a robust approach to risk management.

Maintaining strong governance is a critical platform to delivering the various value-enhancing initiatives planned by the division.

- The new EU regulatory framework, 'Digital Operational Resilience Act' (DORA) will come into force in January 2025. DORA is designed to improve cybersecurity within the finance sector. Movestic has worked on identifying and mapping critical processes and IT systems as part of a group-wide project.
- Analysis of the Global Minimum Tax (GMT) regulatory framework continues, as the directive was implemented in Swedish law in January 2024.
- Corporate Sustainability Reporting Directive (CSRD), the EU adopted new directive on sustainability reporting, became Swedish law in May 2024. Movestic falls within the thresholds for SMEs, which are not covered by CSRD, but Movestic will continue its sustainability work within the reporting area both internally and as part of the Chesnara group.
- During H1 David Brand retired as Chair of the board and was replaced by Eamonn Flanagan, already a member of the board. Additionally, CEO Sara Lindberg joined the board in May and David Rimmington resigned from the board.

As an 'open' business, Movestic not only adds value from sales but as it gains scale, it will become increasingly cash generative which will fund further growth or contribute towards the group's attractive dividend. Movestic continues to adopt a profitable pricing strategy.

- Sales volumes were strong in the first half of the year, rising by 44%.
- The division delivered a commercial new business profit of £2.1m.
- Movestic will continue to develop its pension and savings and risk insurance offerings to increase competitiveness and build customer loyalty.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

BUSINESS REVIEW SWEDEN (CONTINUED)

KPIS (ALL COMPARATIVES HAVE BEEN RESTATED USING 2024 EXCHANGE RATES)

Economic Value[†] Reported value ■ Cumulative dividends £m Jun 193.9 18.9 212.8 2024 2023 18.9 208.8 2022 193.6 223.3 228.2 2021 2020 205.2

FUTURE PRIORITIES

- Progress the development of the digital pension platform to support customers in all distribution channels.
- Continue working to increase the use of automation, streamline processes, and improve administrative efficiency and control.
- Continue to build solid and long-term sustainable value creation for customers and owners through a diversified business model with continued profitable growth of volumes and market shares in selected segments.
- Remain focused on customer loyalty and providing attractive offerings to both retain customers and reach more volumes on the transfer market.
- Provide a predictable and sustainable dividend to Chesnara.
- Seek out opportunities to bring in additional scale through M&A.

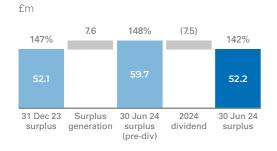

Policyholder average investment return

10.7%

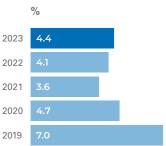

- Focus on high quality service and smooth administrative processes to ensure that Movestic is a partner that is easy to do business with.
- Further strengthen the relationship with brokers as well as expanding partnerships beyond the traditional broker community, for instance the private banking sector.

SOLVENCY RATIO: 142%

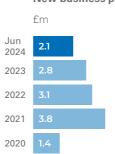

- Proceed with the implementation of sustainability regulations.
- Continue to develop plans, adapt and monitor the company's carbon footprint in order to support and continuously work towards the Chesnara group agenda of net zero financed and operational emissions by 2050.

Occupational pension market share

New business profit

- Keep offering modern and individually adapted solutions within pension and savings and health insurance combined with related digital services.
- Continue to strengthen distribution capacity within all channels and work to launch new partner collaborations within all lines of business.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

BUSINESS REVIEW NETHERLANDS

Our Dutch businesses deliver growth through our acquisitive closed-book business, Waard, which seeks to acquire and integrate portfolios; and our open-book business, Scildon, which seeks to write profitable term, investments and savings business.

BACKGROUND INFORMATION

INITIATIVES & PROGRESS IN 2024

CAPITAL & VALUE MANAGEMENT

Both Waard and Scildon have a common aim to make capital available to the Chesnara group to fund further acquisitions or to contribute to the dividend and debt funding. Whilst their aims are common, the dynamics by which the businesses add value differ:

- Waard is in run-off and has the benefit that the capital requirements reduce in line with the attrition of the book. Waard periodically grows through delivering acquisitions.
- As an 'open business', Scildon's capital position does not benefit from book run-off. It therefore adds value and creates surplus capital through writing new business and by efficient operational management and capital optimisation.

- Scildon's IT system improvement project is near completion with cost efficiencies materialising in line with the business case.
- Scildon has changed its asset mix to provide a better interest rate hedge, replacing short-duration government bonds with investments in money market funds and increasing its investment in mortgage funds. Waard also made changes to its asset mix to improve longer-term returns.
- Waard paid a dividend of £6.8m (€8m) to Chesnara in July 2024.
- Both Waard and Scildon continue to have strong solvency positions, inclusive of the use of the Volatility Adjustment, with Scildon at 194% and Waard at 304%.

CUSTOMER OUTCOMES

Great importance is placed on providing customers with high quality service and positive outcomes.

Whilst the ultimate priority is the end customer, in Scildon we also see the brokers who distribute our products as being customers, and hence developing processes to best support their needs is a key focus.

- Scildon's focus remains on providing flexible solutions and offerings to its clients, including sustainable options. This has involved a continued focus on digitisation for term life insurance and investment-linked insurance customers.
- Scildon has also worked to make the pension scheme more transparent for customers through a digital platform.
- Waard continued work on digitalising its customer portal to both make it easier for customers to access documents but also to reduce the level of printing required, in turn helping the group decarbonise. This is expected to be launched in the second half of 2024.

GOVERNANCE

Waard and Scildon operate in a regulated environment and comply with rules and regulations both from a prudential and a financial conduct point of view.

- Both business units have been progressing their sustainability activity, including Scildon's commitment to positive solutions through its partnership with JustDiggit. Waard started the first stage of its investment transition plan to reduce its scope 3 emissions over the period.
- Work has continued on the implementation of the Corporate Sustainability Reporting Directive (CSRD), which is an EU adopted new directive on sustainability reporting effective from 2024. It will be applied from 2025 by Scildon, though Waard is working to determine its implementation date, given the complex implementation rules of the legislation. The double materiality assessments are ongoing and will be finalised in the short term.
- In January 2024, Chesnara Holdings BV was dissolved resulting in Scildon, Waard Leven and Waard Schade moving to be directly owned by Chesnara plc. The company was later de-registered in April 2024.

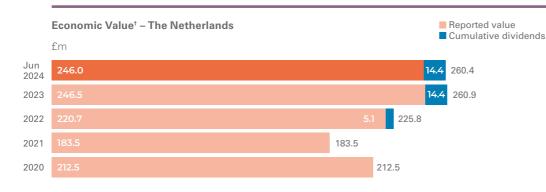

Scildon brings a 'new business' dimension to the Dutch division. Scildon sells protection, individual savings, and group pensions contracts via a broker-led distribution model. The aim is to deliver meaningful value growth from a realistic market share. New business also helps the company maintain scale and hence contributes to unit cost management.

- Scildon continues to generate solid new business profits, with a commercial new business result of £1.8m for the first half of 2024. The overall term market volumes remain suppressed with pressure on pricing. Scildon have retained their disciplined approach to pricing, albeit at lower volumes.
- Scildon policy count continued to increase, closing the period with nearly 238,000 policies. The market share for the Scildon term product over the first half of 2024 was 10.3% (2023: 10.8%).
- In April 2024, Scildon launched a Stop Smoking lifestyle proposition on new business reflecting its focus on expanding offerings to customers.

BUSINESS REVIEW NETHERLANDS (CONTINUED)

KPIS (ALL COMPARATIVES HAVE BEEN RESTATED USING 2024 EXCHANGE RATES)

FUTURE PRIORITIES

- Effective management of the closed-book run-off in Waard to enable ongoing dividend payments to Chesnara.
- Complete the IT improvement project and ensure the planned efficiencies are delivered.
- Continue to focus on maintaining an efficient and cost-effective operating model.
- Identify potential capital management actions, focusing on those that generate the appropriate balance of value and cash generation.
- Support Chesnara in identifying and delivering Dutch acquisitions.

Client satisfaction rating

 Regular engagement with customers to improve service quality and to enhance and develop existing processes, infrastructure, and customer experiences.

 Continue to review and progress appropriate initiatives to meet the needs of customers.

Net Promoter Score (NPS) – introduced in 2023 and therefore there are no earlier comparatives available. Scale ranges from -100 to +100 and measures customer loyalty by looking at their likelihood of recommending a given business.

SOLVENCY RATIO: SCILDON 194%

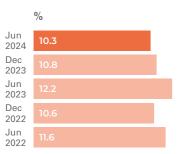

SOLVENCY RATIO: WAARD 304%

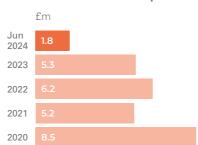

- Progress the implementation of the Corporate Sustainability Reporting Directive (CSRD).
- Finalise the double materiality assessments and gap analyses.
- Prepare the roadmap for investments to become net zero in 2050.

Term assurance market share

Scildon new business profit

 Reassess and simplify the product portfolio and implement further cost improvement initiatives to help increase new business profits which are lower than previous years due to pricing competition.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

BUSINESS REVIEW • ACQUIRE LIFE & PENSIONS BUSINESSES

How we deliver our acquisition strategy

- Identify potential deals through an effective network of own contacts and advisors and industry associates, utilising both group and divisional management expertise as appropriate.
- We primarily focus on acquisitions in our existing territories, although we will consider other territories should the opportunity arise and this is supportive of our strategic objectives.
- We assess deals by applying well established criteria which consider the impact on cash generation and Economic Value under best estimate and stressed scenarios.
- We work cooperatively with regulators.
- The financial benefits are viewed in the context of the impact the deal will have on the enlarged group's risk profile.
- Transaction risk is reduced through stringent risk-based due diligence procedures and the senior management team's acquisition experience and positive track record.
- We fund deals with a combination of own resources, debt or equity depending on the size and cash flows of each opportunity and commercial considerations.

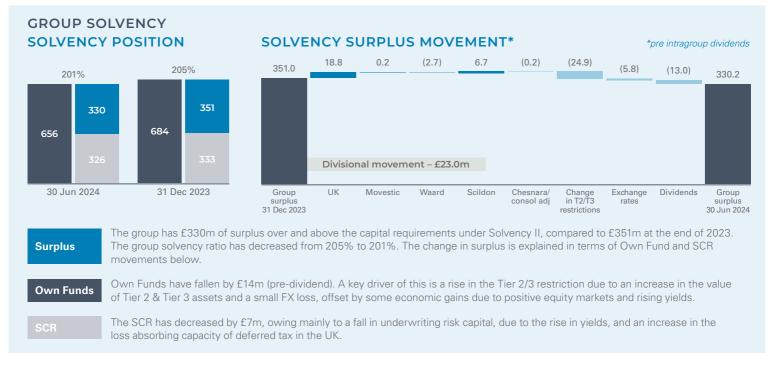

HOW WE ASSESS DEALS					
Cash generation [†]	Collectively our future acquisitions must be suitably cash generative to continue to support Chesnara delivering attractive dividends.				
Value enhancement	Acquisitions are required to have a positive impact on the Economic Value [†] per share in the medium term under best estimate and certain more adverse scenarios.				
Customer outcomes	Acquisitions must ensure we protect, or ideally enhance, customer interests with deals always giving full regard to Consumer Duty responsibilities.				
Risk appetite	Acquisitions should normally align with the group's documented risk appetite. If a deal is deemed to sit outside our risk appetite the financial returns must be suitably compelling.				

ACQUISITION OUTLOOK

- Chesnara has been active during the first half of 2024 in assessing a number of potential acquisitions. This included due diligence activity. We continue to see a healthy flow of future opportunities across the UK & European insurance market.
- We remain disciplined in evaluating acquisition opportunities and utilise both internal and external expertise in order to assess risks and benefits of potential opportunities for shareholders.
- Our expectation is that sales of portfolios will continue across the UK & European market and our strong expertise and knowledge, good regulatory relationships and the flexibility of our operating model mean that Chesnara is very well placed to manage the additional complexity associated with these portfolio transfers and provide beneficial outcomes for all stakeholders. These transactions may not be suitable for all potential consolidators, in particular those who do not have existing regulatory licenses.
- Key drivers for owners to divest portfolios continue to remain relevant and create a strong pipeline. These include alternative uses of capital (e.g. return to investors or supporting other business lines), operational challenges (e.g. end of life systems), management distraction, regulatory challenges and wider business and strategic needs.
- We continue to have immediately available acquisition firepower of over £200m, noting we seek to hold cash reserves to cover costs for 12 months (dividend, coupon and working capital). We will continue to explore how we can increase our funding capability further, including consideration of partnerships as well as equity and debt to ensure we can compete for larger deals.
- Our financing considerations, when looking at new deals, are: that we operate in our normal operating solvency range of 140-160%; we maintain our investment grade rating; we retain liquid resources to cover the dividend, coupon and working capital for approximately one year; and we continue to have the capacity to finance smaller transactions without further fundraising.

CAPITAL MANAGEMENT • SOLVENCY II

Subject to ensuring other constraints are managed, surplus capital is a useful proxy measure for liquid resources available to fund items such as dividends, acquisitions or business investment.

Solvency II background

- Solvency surplus is a measure of how much the value of the company (Own Funds) exceeds the level of capital it is required to hold.
- The value of the company is referred to as its Own Funds (OF) and this is measured in accordance with the rules of the Solvency II regime.
- The capital requirement is also defined by Solvency II rules and the primary requirement is referred to as the Solvency Capital Requirement (SCR).
- Solvency is expressed as either a ratio: OF/SCR %; or as an absolute surplus: OF LESS SCR.

WHAT ARE OWN FUNDS?

A valuation which reflects the net assets of the company and includes a value for future profits expected to arise from in-force policies.

The Own Funds valuation: A restriction is applied to reduce the aggregate value of Tier 2 and 3 assets down to 50% of the reported SCR.

Contract boundaries: Solvency II rules do not allow for the recognition of future cash flows on certain policies despite a high probability of receipt.

Risk margin: The Solvency II rules require a 'risk margin' liability which is deemed to be above the realistic cost, particularly in respect of the overseas divisions. The overseas risk margin is based on the original methodology whereas the UK benefits from HMT's Solvency II reforms.

Restricted with-profit surpluses: Surpluses in the group's with-profit funds are not recognised in Solvency II Own Funds despite their commercial value.

We define Economic Value (EcV)[†] as being the Own Funds adjusted for the items above. As such our Own Funds and EcV have many common characteristics and tend to be impacted by the same factors.

Transitional measures, introduced as part of the long-term guarantee package when Solvency II was introduced, are available to temporarily increase Own Funds. Chesnara does not take advantage of such measures, however we do apply the Volatility Adjustment within our Dutch and UK divisions.

How do Own Funds change?

Own Funds (and Economic Value) are sensitive to economic conditions. In general, positive equity markets and increasing yields lead to OF growth and vice versa. Other factors that improve OF include writing profitable new business, reducing the expense base and improvements to lapse rates.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

WHAT IS CAPITAL REQUIREMENT?

The Solvency Capital Requirement can be calculated using a 'standard formula' or 'internal model'. Chesnara adopts the 'standard formula'.

There are three levels of capital requirement:

Minimum dividend paying requirement/risk appetite requirement:

The board sets a minimum solvency level above the SCR which means a more prudent level is applied when making dividend decisions.

Solvency Capital Requirement: Amount of capital required to withstand a 1 in 200 event. The SCR acts as an intervention point for supervisory action including cancellation or the deferral of distributions to investors.

Minimum Capital Requirement (MCR): The MCR is between 45% and 25% of the SCR. At this point Chesnara would need to submit a recovery plan which if not effective within three months may result in authorisation being withdrawn.

How does the SCR change?

Given the largest component of Chesnara's SCR is market risk, changes in investment mix or changes in the overall value of our assets has the greatest impact on the SCR. For example, equity assets require more capital than low risk bonds. Also, positive investment growth in general creates an increase in SCR. Book run-off will tend to reduce SCR, but this will be partially offset by an increase as a result of new business.

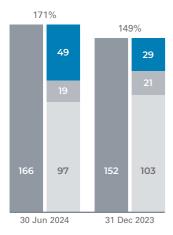

The HMT's reforms to Solvency II were laid before parliament on 8 December 2023 and came into force on 31 December 2023. The reforms updated the risk margin calculation for CA.

EIOPA has proposed provisional reforms to Solvency II. These reforms need to be presented to member states and the European Parliament for approval. We continue to monitor any further proposed changes closely and future financial statements will report on the UK specific application of Solvency II as it diverges from the EU's regime.

CAPITAL MANAGEMENT · SOLVENCY II (CONTINUED)

We are well capitalised at both a group and divisional level. We have applied the Volatility Adjustment in Scildon, Waard Leven and CA, but have not used any other elements of the long-term guarantee package within the group. The Volatility Adjustment is an optional measure that can be used in solvency calculations to reduce volatility arising from large movements in bond spreads.

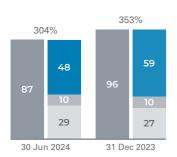

Surplus: £49.4m above board's Capital Management Policy.

Dividends: Solvency position is stated after £35.0m proposed dividend.

Own Funds: Increased by £13.3m, mostly driven by positive economic experience as a result of rise in equities and fall in credit spreads.

SCR: Decreased by £5.5m, with the key drivers being a reduction in underwriting risks, due to the rise in yields, and an increase in LACDT, due to a rise in deferred tax liabilities

NETHERLANDS - WAARD GROUP fm

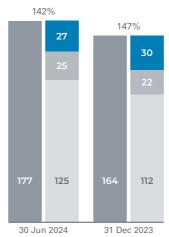

Surplus: £48.3m above board's Capital Management Policy.

Dividends: Solvency position stated after £6.8m proposed dividend.

Own Funds: Decreased by £9.5m, largely owing to an economic strain caused by an increase in government bond spreads and the rise in interest rates.

SCR: Increased by £1.2m, mainly due to an increase in spread risk, due to some proactive re-risking via an increase in corporate bond holdings, offset by a reduction in counterparty default risk.

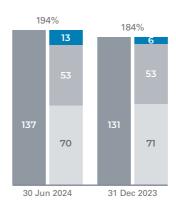

Surplus: £27.4m above board's Capital Management Policy.

Dividends: Solvency position is stated after £7.5m (100 MSEK) proposed dividend.

Own Funds: Increased by £12.9m, largely owing to positive economic movements, offset by a small operating strain and assumption changes.

SCR: Increased by £12.7m due to positive equity growth and moderate rise in currency risks.

NETHERLANDS - SCILDON £m

Surplus: £13.5m above board's Capital Management Policy.

Dividends: No foreseeable dividend was proposed for 2024.

Own Funds: Increased by £5.7m driven by positive operating variances and new business profits.

SCR: Decreased by £1.0m, chiefly consisting of an increase in spread risk, owing to a rise in money market holdings, offset by a decrease in life underwriting risks, due to rising yields.

The graphs on this page present the divisional view of the solvency position which may differ to the position of the individual insurance company(ies) within the consolidated numbers. Note that year end 2023 figures have been restated using 30 June 2024 exchange rates in order to aid comparison at a divisional level

Own Funds (Post Div)

SCR Buffer

Surplus

CAPITAL MANAGEMENT • SENSITIVITIES

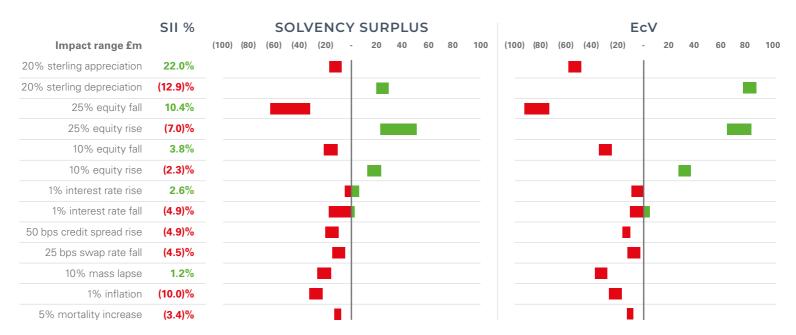

The group's solvency position remains strong and we proactively evaluate the main factors that can affect our solvency. The group's EcV[†], and cash generation[†], both of which are derived from the group's solvency calculations, are also sensitive to these factors.

The diagram below provides some insight into the immediate impact of certain sensitivities that the group is exposed to, covering solvency surplus and Economic Value. As can be seen, EcV tends to take the 'full force' of adverse conditions immediately (where the impacts are calculated on the cash flows for the life of our portfolios) whereas solvency is often protected in the short term and, to a certain extent, the longer term due to compensating impacts on required capital.

Tier 2 debt has a material impact on the reported sensitivities because as capital requirements move, the amount of the Tier 2 debt able to be recognised in the Own Funds also moves. For example, where FX

movements reduce the SCR, we also experience a corresponding reduction in base Own Funds and Own Funds relating to Tier 2 capital. Importantly though, the Tier 2 debt itself has created more than sufficient additional headroom to accommodate this.

Whilst cash generation has not been shown in the diagrams below, the impact of these sensitivities on the group's solvency surplus has a direct read across to the immediate impact on cash generation. Each individual bar in the diagram illustrates the estimated impact range (£m) of the respective sensitivities and whether that impact is positive (green) or negative (red).

INSIGHT*

20% sterling appreciation: A material sterling appreciation reduces the value of surplus in our overseas divisions and any overseas investments in our UK entities, however this is partially mitigated by the group currency hedge so the overall impact on solvency is reduced.

Equity sensitivities: The equity rise sensitivities cause both Own Funds and SCR to rise, as the value of the funds exposed to risk is higher. The increase in SCR can be larger than Own Funds, resulting in an immediate reduction in surplus, depending on the starting point of the symmetric adjustment. The converse applies to an equity fall sensitivity, although the impacts are not fully symmetrical due to management actions and tax. The Tier 2 debt value also changes materially in these sensitivities. The change in symmetric adjustment can have a significant impact (25% equity fall: -£25.3m to the SCR, 25% equity rise: +£19.3m to SCR). The EcV impacts are more intuitive as they are more directly linked to Own Funds impact. CA and Movestic contribute the most due to their large amounts of unit-linked business, much of which is invested in equities.

Interest rate sensitivities: An interest rate fall has a more adverse effect on group EcV than an interest rate rise. Group solvency is less exposed to rising interest rates as a rise in rates causes capital requirements to fall, increasing solvency.

50 bps credit spread rise: A credit spread rise has an adverse impact on surplus and future cash generation, particularly in Waard and Scildon due to corporate and non-local government bond holdings that form part of the asset portfolios backing non-linked insurance liabilities. The impact on the other divisions is less severe.

25 bps swap rate fall: This sensitivity measures the impact of a fall in the swap discount curve with no change in the value of assets. The result is that liability values increase in isolation. The most material impact is on Scildon due to the size of the non-linked book.

10% mass lapse: In this sensitivity Own Funds fall as there are fewer policies on the books, thus less potential for future profits. This is largely offset by a fall in SCR, although the amount of eligible Tier 2 capital also falls. The division most affected is Movestic as it has the largest concentration of unit-linked business.

1% inflation rise: This sensitivity measures a permanent increase in inflation in every future year (above existing valuation assumptions). Such a rise in inflation increases the amount of expected future expenses. This is capitalised into the balance sheet and hits the solvency position immediately.

5% mortality increase: This sensitivity has an adverse impact on surplus and cash generation, particularly for Scildon due to their term products.

*BASIS OF PREPARATION ON REPORTING

Although it is not a precise exercise, the general aim is that the sensitivities modelled are deemed to be broadly similar (with the exception that the 10% equity movements are naturally more likely to arise) in terms of likelihood. Whilst sensitivities provide a useful guide, in practice, how our results react to changing conditions is complex and the exact level of impact can vary due to the interactions of events and starting position.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Annual Report and Accounts.

FINANCIAL REVIEW

Our key performance indicators provide a good indication of how the business has performed in delivering its three strategic objectives. These two pages provide some insight into what is driving the results for the period. Further analysis can be found on pages 27 to 33.

£19.6M 30 JUNE 2023: £11.1M

CASH GENERATION[†]

excluding the impact of acquisitions

What is it?

Cash generation is calculated as being the movement in Solvency II Own Funds over the internally required capital, excluding the impact of Tier 2 debt. The internally required capital is determined with reference to the group's capital management policies, which have Solvency II rules at their heart. Cash generation is used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed.

Why is it important?

Cash generation is a key measure, because it is the net cash flows to Chesnara from its life and pensions businesses which support Chesnara's dividend-paying capacity and acquisition strategy. Cash generation can be a strong indicator of how we are performing against our stated objective of 'maximising value from existing business'. However, our cash generation is always managed in the context of our stated value of maintaining strong solvency positions within the regulated entities of the group.

Risks

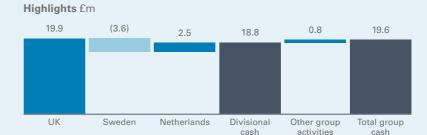

The ability of the underlying regulated subsidiaries within the group to generate cash is affected by a number of our principal risks and uncertainties as set out on pages 72 to 73. Whilst cash generation is a function of the regulatory surplus, as opposed to the IFRS surplus, it is impacted by similar drivers, and therefore factors such as yields on fixed interest securities and equity and property performance contribute significantly to the level of cash generation within the group.

£18.8M 30 JUNE 2023: £2.3M

DIVISIONAL CASH GENERATION[†]

Further detail on p27

excluding the impact of acquisitions

- Cash generation of £19.6m exceeded the prior year (30 June 2023: £11.1m) and includes a material adverse impact from the symmetric adjustment of £9.3m (six months to 30 June 2023: £10.6m).
- The divisional result of £18.8m was driven by another period of strong cash generation from the UK (£19.9m), with a healthy contribution from Scildon also supporting the result. In Sweden, value growth delivered through equity returns was exceeded by associated rises in SCR (and symmetric adjustment), while the Waard result included a reduction in Own Funds due to economic losses from the negative impact of rising interest rates.
- The central group contribution includes the benefit of a cash gain from our FX hedge, which has risen in value to offset some (£4.7m) of the adverse FX movements experienced elsewhere in the group, helping to reduce capital requirements. The reduction in SCR offsets the adverse impact of consolidation adjustments and central development expenditure (including M&A).

£13.4M 30 JUNE 2023: £15.3M PROFIT* IFRS PRE-TAX PROFIT

What is it?

Presentation of the results in accordance with International Financial Reporting Standards (IFRS) aims to recognise the profit arising from the longer-term insurance and investment contracts over the life of the policy.

Why is it important?

The IFRS results form the core of reporting and hence retain prominence as a key financial performance metric. We believe that, for Chesnara, the IFRS results in isolation do not recognise the wider financial performance of the business, hence the use of supplementary Alternative Performance Measures (pages 72 and 73) to enhance understanding of financial performance.

Risks

IFRS 17 was effective from 1 January 2023 and has been applied in the financial statements in section C. IFRS 17 introduces a concept of insurance revenue which aims to reflect the insurance contract services provided in each period in the income statement by establishing an explicit measure of future profit (the Contractual Service Margin (CSM)) and provides a framework as to how the CSM is recognised in a given period. The 'investment result' is presented separately from the 'insurance result' on the face of the income statement. Market volatility impacting the surplus assets will result in volatility in investment result and the IFRS pre-tax profit/(loss). Foreign currency fluctuations will further affect total comprehensive income.

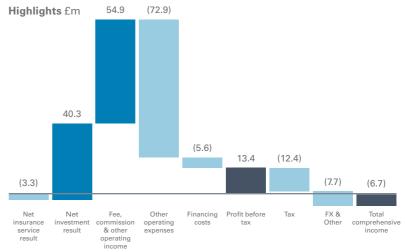

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

*2023 IFRS comparatives have been restated from those previously reported – see the IFRS financial statements section for further information.

£(6.7) M 30 JUNE 2023: £0.5 M LOSS*

TOTAL COMPREHENSIVE INCOME

Further detail on p32

- Profit before tax in the period of £13.4m includes a net insurance service loss of £3.3m and an investment result of £40.3m (six months to 30 June 2023: £10.5m and £24.6m profit respectively).
- The negative insurance service result has been driven primarily by adverse experience and assumption changes on lines of business, termed 'onerous contracts', for which the CSM has been extinguished meaning such losses must be taken to the P&L rather than to the CSM.
- The positive investment result in the year is reflective of equity market gains combined with rising yields.

FINANCIAL REVIEW (CONTINUED)

£508.0M 31 DECEMBER 2023: £524.7M

ECONOMIC VALUE (EcV)†

Further detail on p30

What is it?

Economic Value (EcV) was introduced following the introduction of Solvency II at the start of 2016, with EcV being derived from Solvency II Own Funds. EcV reflects a market-consistent assessment of the value of the existing insurance business, plus the adjusted net asset value of the non-insurance businesses within the group.

Why is it important?

EcV aims to reflect the market-related value of in-force business and net assets of the non-insurance business and hence is an important reference point by which to assess Chesnara's value. A life and pensions group may typically be characterised as trading at a discount or premium to its Economic Value. Analysis of EcV provides additional insight into the development of the business over time.

The EcV development of the Chesnara group over time can be a strong indicator of how we have delivered to our strategic objectives, in particular the value created from acquiring life and pensions businesses and enhancing our value through writing profitable new business. It ignores the potential of new business to be written in the future (the franchise value of our Swedish and Dutch divisions) and the value of the company's ability to acquire further businesses.

Risks

The Economic Value of the group is affected by economic factors such as equity and property markets, yields on fixed interest securities and bond spreads. In addition, the EcV position of the group can be materially affected by exchange rate fluctuations. For example, a 20.0% weakening of the Swedish krona and euro against sterling would reduce the EcV of the group within a range of £50m-£60m, based on the composition of the group's EcV at 30 June 2024.

Highlights £m

Highlights £m

Total EcV earnings

- EcV growth for the opening half of the year was £20.2m (prior to the dividend payment and FX consolidation losses).
- This value growth was delivered through a variety of sources across the group. Positive new business results contributed to operating profits in the Netherlands while, at a total level, economic growth was muted as investment market conditions had a mixed impact on our divisions. Growth in the UK and Sweden (predominantly through rising equities and yields) was offset by losses in the Netherlands, owing to the negative impact of changes in interest rates.

£20.2M 30 JUNE 2023: £32.6M

EcV EARNINGS†

excluding acquisitions

Further detail on p29

What is it?

In recognition of the longer-term nature of the group's insurance and investment contracts, supplementary information is presented that provides information on the Economic Value of our business.

The principal underlying components of the EcV earnings are:

- The expected return from existing business (being the effect of the unwind of the rates used to discount the value in-force);
- Value added by the writing of new business;
- Variations in actual experience from that assumed in the opening valuation;
- The impact of restating assumptions underlying the determination of expected cash flows; and
- The impact of acquisitions.

Why is it important?

A different perspective is provided in the performance of the group and on the valuation of the business. Economic Value earnings are an important KPI as they provide a longer-term measure of the value generated during a period. The Economic Value earnings of the group can be a strong indicator of how we have delivered against all three of our core strategic objectives. This includes new business profits generated from writing profitable new business, Economic Value profit emergence from our existing businesses, and the Economic Value impact of acquisitions.

Risks

The EcV earnings of the group can be affected by a number of factors, including those highlighted within our principal risks and uncertainties and sensitivities analysis as set out on pages 36 to 39. In addition to the factors that affect the IFRS pre-tax profit and cash generation of the group, the EcV earnings can be more sensitive to other factors such as the expense base and persistency assumptions. This is primarily due to the fact that assumption changes in EcV affect our long-term view of the future cash flows arising from our business.

Operating earnings Economic earnings Other (12.6)

20.2

- Economic returns in the period underpin the positive EcV earnings result. In the UK and Sweden, earnings were delivered through equity market growth and positive impact of rising yields. This offset economic losses in the Dutch divisions, with movements in interest rates having an adverse impact on bond holdings.
- Operating profits were reported in the Dutch divisions, however the result was impacted by adverse transfer activity in Sweden and a small loss in the UK resulting in overall operating earnings of £0.9m.
- The 'Other' category includes risk margin movement, negative tax impacts, the cost of Tier 2 coupon payments and central costs which are primarily one-off costs associated with M&A activity.

'Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

FINANCIAL REVIEW • CASH GENERATION

There is no reporting framework defined by the regulators for cash generation and there is therefore inconsistency across the sector. We define cash generation as being the movement in Solvency II Own Funds over and above the group's internally required capital, which is based on Solvency II rules.

£19.6M 30 JUNE 2023: £11.1M

GROUP CASH GENERATION

excluding the impact of acquisitions

Cash generation was £19.6m for the period, with a divisional cash total of £18.8m, the result benefitting from positive equity growth (net of the temporary net impact of the symmetric adjustment). Cash is generated from increases in the group's solvency surplus, which is represented by the excess of Own Funds held over management's internal capital needs. These are based on regulatory capital requirements, with the inclusion of additional 'management buffers'.

Implications of our cash definition:

- Creates a strong and transparent alignment to a regulated framework.
- Positive cash results can be approximated to increased dividend potential.
- Cash is a factor of both value and capital and hence management are focused on capital efficiency in addition to value growth and indeed the interplay between the two.

Challenges and limitations

- In certain circumstances the cash reported may not be immediately distributable by a division to group or from group to shareholders.
- Brings the technical complexities of the SII framework into the cash results e.g. symmetric adjustment, with-profit fund restrictions, model changes etc, and hence the headline results do not always reflect the underlying commercial or operational performance.

30 Jun 2024 £m	Movement in Own Funds	Movement in management's capital requirement	Forex impact	Cash generated/ (utilised)	30 Jun 2023 £m Cash generated/ (utilised)
UK	13.3	6.6	_	19.9	10.0
Sweden	13.0	(15.3)	(1.2)	(3.6)	(6.4)
Netherlands – Waard Group	(1.5)	(1.7)	(1.6)	(4.7)	(0.4)
Netherlands – Scildon	5.8	1.6	(0.2)	7.2	(0.9)
Divisional cash generation/(utilisation)	30.6	(8.8)	(3.0)	18.8	2.3
Other group activities	(7.3)	8.1	(0.0)	0.8	8.8
Group cash generation/(utilisation)	23.3	(0.7)	(3.0)	19.6	11.1

GROUP

- Other group activities include consolidation adjustments as well as central costs and central SCR movements.
- Central costs include Tier 2 debt coupon payments (c£5m) and uncovered central expenditure, of which a large proportion of exceptional non-recurring development activity.

The UK reported another strong period of cash generation, contributing £19.9m in the first half of 2024. This was delivered through both Own Funds growth and a reduction in capital requirements. Economic conditions (mainly the positive impact of rising yields) supported both the growth in Own Funds and the reduction in SCR (from lower with-profit guarantee costs, offsetting a rise in symmetric adjustment).

In Movestic, the increase in SCR was primarily driven by market risk related capital requirements. This exceeded the growth in Own Funds from economic returns on unit-linked business. This equity market-driven growth in Own Funds also resulted in a larger increase in the symmetric adjustment.

NETHERLANDS – WAARD

Waard recorded cash utilisation of £4.7m for the period. Own Funds fell due to economic losses (mainly the negative impact on bond holdings of rising interest rates), offsetting operating profits. The SCR increased mainly from a rise in market risk through a higher symmetric adjustment, the purchase of government bonds with longer duration increasing interest rate SCR and proactive re-risking through an increase in corporate bond holdings increasing spread SCR. The divisional result also includes an FX loss on consolidation owing to sterling appreciation versus the euro.

NETHERLANDS – SCILDON

Scildon generated a cash return £7.2m for the period. Positive market conditions were the primary driver of Own Funds growth and higher interest rates also had a positive impact on capital requirements (owing to fall in life risk), reducing the SCR.

FINANCIAL REVIEW • CASH GENERATION - ENHANCED ANALYSIS

The format of the analysis draws out components of the cash generation results relating to technical complexities, modelling issues or exceptional corporate activity. The results excluding such items are deemed to better reflect the inherent commercial outcome (commercial cash generation).

£29.2_M 30 JUNE 2023: £21.8_M

COMMERCIAL CASH GENERATION

excluding the impact of acquisitions

	UK	SWEDEN	NETHERLANDS WAARD	NETHERLANDS SCILDON	DIVISIONAL TOTAL	GROUP ADJ	TOTAL
Base cash generation	19.9	(3.6)	(4.7)	7.2	18.8	0.8	19.6
Symmetric adjustment	3.0	4.4	0.3	0.7	8.4	0.9	9.3
WP restriction look through	0.2	_	_	_	0.2	_	0.2
Commercial cash generation	23.2	0.8	(4.5)	8.0	27.4	1.7	29.2

Commercial cash generation of £29.2m is primarily supported by contributions of £23.2m from the UK business and £8.0m from Scildon. Movestic made a small £0.8m gain in commercial cash while Waard experienced a £4.5m loss. Movements in FX rates during 2024 led to a loss of £3.0m to cash, however, the group FX hedge has more than offset these currency impacts, providing a cash benefit of £10.9m YTD.

The key drivers of the UK result are economic gains from positive equity performance and rising yields - the latter has benefitted both Own Funds and required capital

SWFDFN

The Swedish result, after removing a loss caused by the increase in the symmetric adjustment, is slightly positive. The economic result is positive, principally due to equity market gains, offset by the depreciation of Swedish krona against sterling. The economic gains are offset by a change to lapse assumptions and new business strain.

WAARD

Waard's negative cash result is primarily driven by increased yields and spreads on certain bond holdings, along with the depreciation of the euro against sterling. The negative economic result is offset somewhat by an increase in the Tier 3 tax asset.

SCILDON

Scildon's commercial cash generation reflects both positive economic and operating impacts. The economic gains are a result of equity and yield movements, offset somewhat by the depreciation of the euro against sterling.

GROUP

The central group result is driven by positive economic experience and a beneficial FX hedge movement, offset by central expenses. Central expenses include, Tier 2 debt coupon payments and a range of development activity, such as M&A programmes as well as investment in the business to support the future growth of the group.

FINANCIAL REVIEW • EcV EARNINGS

A period of strong EcV earnings have been delivered through new business gains and economic profits.

£20.2M 30 JUNE 2023: £32.6M **ECV EARNINGS**

Analysis of the EcV result by earnings source:

£m	30 Jun 2024	30 Jun 2023¹	31 Dec 2023 ¹
Expected movement in period	9.8	7.7	14.9
New business	2.5	4.7	4.4
Operating experience variances	(4.1)	(5.7)	14.9
Operating assumption changes	(7.3)	(5.4)	(25.9)
Total operating earnings [†]	0.9	1.3	8.3
Total economic earnings [†]	31.9	31.6	42.9
Other non-operating variances	(4.8)	7.2	(13.8)
Central costs (including one-off costs)	(6.6)	(4.7)	(14.1)
Risk margin movement	2.4	0.9	1.1
Tax	(3.6)	(3.7)	6.3
EcV earnings	20.2	32.6	30.7
Acquisitions	_	28.4	28.4
EcV earnings inc. acquisitions	20.2	61.0	59.1

Analysis of the EcV result by business segment:

£m	30 Jun 2024	30 Jun 2023	31 Dec 2023
UK	13.7	11.0	31.4
Sweden	12.1	15.0	6.8
Netherlands	1.7	12.1	19.5
Group and group adjustments	(7.3)	(5.5)	(27.0)
Acquisitions	-	28.4	28.4
EcV earnings inc. acquisitions	20.2	61.0	59.1

Total economic earnings: The economic result continues to be the largest component of the total EcV earnings, with a profit of £31.9m the period. The result is in line with our reported sensitivities and is driven by the following key market movements:

Rising equity indices:

- FTSE All Share index increased by 5.2%
 (6 months to 30 June 2023: increased by 0.5%);
- Swedish OMX all share index increased by 7.9% (6 months to 30 June 2023: increased by 8.4%);
- The Netherlands AEX all share index increased by 16.2% (6 months to 30 June 2023: increased by 10.2%); and

Widening credit spreads:

- UK AA corporate bond yields decreased to 0.67% (31 December 2023: 0.71%)
- European AA credit spreads decreased to 0.52% (31 December 2023: 0.63%).

Increased yields:

- 10-year UK gilt yields have increased to 4.19% (31 December 2023: 3.64%).

The EcV results continue to illustrate how sensitive the results are to economic factors. As outlined in the past, we continue to be of the view that short-term volatility has limited commercial impact on the business and of more importance is the fact that steady state, over the longer term, we expect EcV growth in the form of real-world investment returns.

Total operating earnings: Operating earnings of £0.9m were reported in the period, driven from positive results in the two Dutch businesses. Their earnings were largely offset in Sweden, where adverse transfer activity resulted in an operating loss for Movestic, and in the UK, where expense strengthening resulted in adverse assumption variances leading to a small operating loss.

Other costs: It is worth noting that the EcV earnings result of £20.2m includes a number of negative components that represent positive investment in the future and items that are non-recurring in nature. Examples of key items in the period include:

- Central costs, primarily one-off costs associated with the M&A strategy.
 Whilst the cost of this development investment is recognised, EcV does not recognise the potential returns we expect from it.
- Tier 2 debt servicing costs EcV does not recognise the benefit of the capital or the potential for future value adding transactions that it provides.

Looking at the results by division:

UK: The UK's positive earning result of £13.7m was driven by favourable market conditions, predominantly the long-term impact of rising yields and equities. Operating losses were small, with favourable fee income being offset by expense strengthening. The result also includes non-recurring transition and transformational costs relating to new outsourcing arrangements and business integrations. The UK also reported higher than expected new business earnings in the first half of the year, contributing to the result.

Sweden: Movestic recorded earnings of £12.1m for the opening half of the year with the division benefitting from external economic factors. Rising equity markets in Sweden and Europe have underpinned economic returns of £22.6m. This more than outweighed an operating loss, owing mainly to adverse transfer activity. Pricing pressures suppressed fee income and lower fund rebates also contributed to the result. Modest new business profits (on an EcV basis) of £0.8m were recorded, reflective of the continued competitive market conditions and margin pressures.

Netherlands: Overall, the Dutch businesses reported growth of £1.7m in the period, with operating profits mitigating economic losses. Across both entities, economic losses were primarily the consequence of rising interest rates, reducing the value of bonds holdings. Scildon generated EcV growth of £4.6m, driven by positive operating variances, offset by the economic experience variances explained above. New business profits were muted, due to market pricing pressures and a smaller term market. In Waard, the negative impact of economic conditions on the bond portfolio led to an overall loss of £2.7m, offsetting positive operating earnings delivered in the opening half of the year.

Group: This component contains a variety of group-related expenses and includes: non-maintenance related costs (such as acquisition activity costs); as well as some material economic-related items such as financing costs, primarily in relation to the Tier 2 debt interest costs, and positive investment returns for the period.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

¹Prior year comparators have been restated following a reallocation of components, with total EcV earnings remaining unchanged.

FINANCIAL REVIEW • EcV

The Economic Value of Chesnara represents the present value of future profits of the existing insurance business, plus the adjusted net asset value of the non-insurance businesses within the group. EcV is an important reference point by which to assess Chesnara's intrinsic value.

£508.0M 31 DECEMBER 2023: £524.7M **ECONOMIC VALUE (EcV)**

Value movement: 1 Jan 2024 to 30 Jun 2024 £m

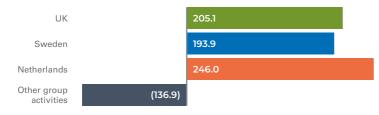

EcV earnings: EcV profits of £20.2m have been driven primarily by positive market conditions over the period. Further detail can be found on page 29.

Foreign exchange: The closing EcV of the group reflects a foreign exchange loss in the period, which is a consequence of sterling appreciation against both the Swedish krona and also the euro since the start of the year.

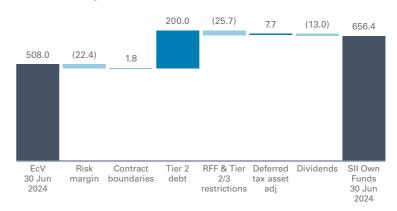

Dividends: Under EcV, dividends are recognised in the period in which they are paid. Dividends of £23.5m were paid during the first half of the year, representing the final dividend from 2023.

EcV by segment at 30 Jun 2024 fm

The above chart shows that the EcV of the group remains diversified across its different markets.

EcV to Solvency II £m

Our EcV is based on a Solvency II assessment of the value of the business but adjusted for certain items where it is deemed that Solvency II does not reflect the commercial value of the business. The above waterfall shows the key difference between EcV and SII, with explanations for each item below.

Risk margin: Solvency II rules applying to our European businesses require a significant 'risk margin' which is held on the Solvency II balance sheet as a liability, and this is considered to be materially above a realistic cost. We therefore reduce this margin for risk for EcV valuation purposes from being based on a 6% (UK: 4%) cost of capital to a 3.25% cost of capital. On our UK business, the Solvency II reform risk tapering is also reversed.

Contract boundaries: Solvency II rules do not allow for the recognition of future cash flows on certain in-force contracts, despite the high probability of receipt. We therefore make an adjustment to reflect the realistic value of the cash flows under EcV.

Ring-fenced fund restrictions: Solvency II rules require a restriction to be placed on the value of surpluses that exist within certain ring-fenced funds. These restrictions are reversed for EcV valuation purposes as they are deemed to be temporary in nature.

Dividends: The interim dividend for 2024 of £13.0m is recognised for SII regulatory reporting purposes. It is not recognised within EcV until it is actually paid.

Tier 2: The Tier 2 debt is treated as 'quasi equity' for Solvency II purposes. For EcV, consistent with IFRS, we continue to report this as debt. Under SII this debt is recognised at fair value, while for EcV this remains at book value.

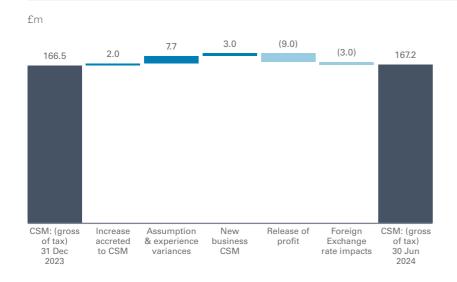

Tier 3: Under Solvency II the eligibility of Tier 3 Own Funds is restricted in accordance with regulatory rules. For EcV, the Tier 3 Own Funds are recognised at an impaired value.

FINANCIAL REVIEW • IFRS BALANCE SHEET

The transition to IFRS 17 is now fully embedded in the reporting of the group's IFRS results and balance sheet. As at 30 June 2024, total net equity is £330m and the CSM, which represents unearned future insurance profits, is £167m (net of reinsurance).

HOW THE CSM HAS MOVED IN THE PERIOD

INSIGHT

The group CSM has slightly increased in the first half of 2024.

Positive experience and assumption changes across the group have added £7.7m of CSM. New business in Scildon has also added £3.0m of CSM, reflecting the future profits arising on profitable new business recognised in the period. These additions broadly offset the £9.0m reduction which reflects the release to profit in the period as the insurance services are provided.

Other smaller movements include the impact of foreign exchange and the 'interest' on unwinding the discounting that is embedded within the opening CSM valuation.

CSM values are shown net of reinsurance but gross of tax. When calculating the IFRS capital base[†] a net of reinsurance and net of tax figure is used. The equivalent net of reinsurance and tax movement of CSM during the six months to 30 June 2024 is £0.4m.

HOW DOES IFRS COMPARE TO EcV AND SOLVENCY II?

EcV and IFRS share a number of common principles. However, for investment contracts, expected future profits on existing policies are not recognised in the IFRS balance sheet, with profits being reported as they arise. This differs to the approach in EcV, where these future profits are fully recognised on the balance sheet, subject to contract boundaries.

We believe that due to the hybrid nature of the business, EcV and Solvency II, alongside cash generation, continue to give a more holistic view of the financial dynamics of the group and are therefore the key metrics that management use to manage the business.

LEVERAGE

Applying the Fitch gearing definition of debt divided by debt plus equity, with the equity denominator adding back the net of tax CSM liability, the gearing of the group as at 30 June 2024 was 30.4% (31 December 2023: 29.2%).

IFRS REPORTING CATEGORY

Net insurance service result

The net insurance service result comprises the revenue and expenses from providing insurance services to policyholders and ceding insurance business to reinsurers and is in respect of current and past service only. Assumption changes, that relate to future service, are therefore excluded from the insurance result (as they adjust the CSM), unless the CSM for a given portfolio of contracts falls below zero; thereby in a 'loss component' position. Economic impacts are also excluded from the insurance service result.

INSIGHT

The net insurance service result of £3.3m loss can be broken down into the following elements:

- gains from the release of risk adjustment and CSM of £11.2m (six months to 30 June 2023: £12.4m). These gains represent a healthy and consistent source of future profits for the group.
- losses of £14.5m (six months to 30 June 2023: £1.9m loss) caused by experience impacts and loss component effects where portfolios of contracts with no CSM have suffered adverse impacts that would otherwise be offset in the balance sheet if the CSM for those portfolios were positive. In this reporting period, a variety of different factors have contributed to the negative result, some of which will have offsetting amounts in the investment result.

Movement in CSM

The movement in CSM is important to consider alongside the income statement. New CSM represents future profits that are expected to be released to the income statement over time and whilst a lot of the costs associated with generating this new CSM are recognised in the year, the expected profit is deferred over the life of the products.

During the period to 30 June 2024, the gross of tax CSM has increased by £0.7m to £167.2m. The key components of this increase are £3.0m of additional CSM arising from new business within Scildon and positive experience changes across all divisions which increased the CSM by £7.7m. These amounts are offset by £9.0m of CSM released to the income statement. This remaining CSM will be earned over the coverage period of the policies to which it relates, and the expected earnings pattern is such that after 10 years more than 40% will remain to be earned.

[†]Alternative Performance Measure (APM) used to enhance understanding of financial performance. Further information on APMs can be found in the additional information section of this Half Year Report.

^{*}2023 IFRS comparatives have been restated from those previously reported – see the IFRS financial statements section for further information.

FINANCIAL REVIEW • IFRS INCOME STATEMENT (CONTINUED)

IFRS REPORTING CATEGORY

INSIGHT

Net investment result

The net investment result contains the investment return earned on all assets together with the financial impacts of movements in insurance and investment contract liabilities.

The investment result of £40.3m in the year to date reflects the positive market conditions in the period, with equity market gains combined with rising yields.

The UK investment result includes £8.1m in respect of UK policyholder tax deductions on investment contracts which will have a corresponding contra impact within the tax line. The effect of locked in discount rates has also contributed £3.3m, partly offset by negative loss component impacts in the insurance service result.

Fee, commission and other operating income

The most significant item in this line is the fee income that is charged to policyholders in respect of the asset management services provided for investment contracts. There is no income in respect of insurance contracts in this line, as this is all now reported in the insurance result.

Fee, commission and other operating income shows an improvement on the 2023 comparative, but this is in part due to increased fee income in the form of yield tax deducted from policyholders in Movestic (£20.0m for the six months to 30 June 2024 and £11.7m for the six months to 30 June 2023) as a result of improving economic factors, with a corresponding offset within other operating expenses.

Other operating expenses

Other operating expenses consist of costs relating to the management of the group's investment business, non-attributable costs relating to the group's insurance business and other certain one-off costs such as project costs. Other items of note are the amortisation of intangible assets in respect of investment business and the payment of yield tax relating to policyholder investment funds in Movestic, for which there is a corresponding income item within the fee income line.

The expenses incurred in the first six months of 2024 are higher than the corresponding six months in 2023, driven mainly by the increased policyholder yield tax from the impact of stronger market on unit-linked funds in Movestic. This offsets the equivalent value within the fee, commission and other operating income line above.

Financing costs

This predominantly relates to the cost of servicing our Tier 2 corporate debt notes which were issued in early 2022. Further details can be found in Note C5 of the financial statements.

Profit arising on business combinations and portfolio acquisitions

During 2023, Chesnara successfully completed the acquisition of the insurance portfolio of Conservatrix, a specialist provider of life insurance products in the Netherlands. This gave rise to a day 1 gain which can be found within the 2023 income statement. There has been no equivalent gain for 2024.

Foreign exchange

The IFRS result of the group reflects a foreign exchange loss in the period, a consequence of sterling appreciation, particularly against the Swedish krona. The resulting gain in respect of existing foreign exchange rate hedges can be seen within the investment result.

Other comprehensive income

This represents the impact of movements in the valuation of land and buildings held in our Dutch division.

Income tax

Income tax consists of both current and deferred taxes.

The income tax expense is mainly the result of a UK deferred tax charge driven by utilisation of 'excess E' (brought forward losses) against the current year tax charge.

RISK MANAGEMENT

Managing risk is a key part of our business model. We achieve this by understanding the current and emerging risks to the business, mitigating them where appropriate and ensuring they are appropriately monitored and managed.

HOW WE MANAGE RISK

The Risk Management System supports the identification, assessment, and reporting of risks to monitor and control the probability and/or impact of adverse outcomes within the board's risk appetite or to maximise realisation of opportunities.

RISK MANAGEMENT SYSTEM

RISK MANAGEMENT SYSTEM REVIEW AND DEVELOPMENT

CLEAR ACCOUNTABILITIES AND RESPONSIBILITIES

STRATEGY

The risk management strategy contains the objectives and principles of risk management, the risk appetite, risk preferences and risk tolerance limits.

POLICIES

The risk management policies implement the risk management strategy and provide a set of principles (and mandated activities) for control mechanisms that take into account the materiality of risks.

PROCESSES

monitored and reported to support decision making.

REPORTING

The risk management reports deliver information on the material risks faced by the business and evidence that principal risks are actively monitored and analysed and managed against risk appetite.

Chesnara adopts the 'three lines of defence' model with a single set of risk and governance principles applied consistently across the business.

In all divisions we maintain processes for identifying, evaluating and managing the material risks faced by the group, which are regularly reviewed by the divisional and group senior leadership teams and Audit & Risk Committees. Our risk assessment processes have regard to the significance of risks, the likelihood of their occurrence and take account of the controls in place to manage them. The processes are designed to manage the risk profile within the board's approved risk appetite.

Group and divisional risk management processes are enhanced by stress and scenario testing, which evaluates the impact of certain adverse events occurring separately or in combination. The results, conclusions and any recommended actions are included within divisional and group ORSA Reports to the relevant boards. There is a strong correlation between these adverse events and the risks identified in 'Principal risks and uncertainties' (pages 36 to 39). The outcome of this stress testing provides context against which the group and divisions can assess whether any changes to its risk appetite or to its management processes are required.

RISK MANAGEMENT · ROLE OF THE BOARD

The Chesnara board is responsible for the adequacy of the design and implementation of the group's risk management and internal control system and its consistent application across divisions. All significant decisions for the development of the group's Risk Management System are the group board's responsibility.

CLIMATE CHANGE RISK WITHIN CHESNARA'S RISK FRAMEWORK

Climate change is not considered as a standalone principal risk. Instead, the risks arising from climate change are integrated through existing considerations and events within the framework. The information in the following pages has been updated to reflect Chesnara's latest views on the potential implications of climate change risk and wider developments and activity in relation to environmental, social and governance (ESG).

Chesnara has embedded climate change risk within the group's Risk Framework and includes a detailed assessment as part of the group's regular ORSA exercise, concluding that the group is not currently materially exposed to climate change risk. However, Chesnara is not complacent about the wider risks arising from climate change and the broader sustainability agenda, including strategic, reputational and operational risks, some of which are material risks for the group.

GEOPOLITICAL RISK

Geopolitical risk continues to create a greater level of uncertainty across the group risk profile. To name some examples, the ongoing conflict between Ukraine and Russia, unrest in the Middle East and growing tensions between China and Taiwan all continue to be areas of emerging risk for Chesnara group, in the sense that these are evolving situations which have potential implications for Chesnara's Principal risks. The risk information on the following pages includes specific commentary where appropriate.

During the course of 2024, more than 40 countries, accounting for over 40 percent of the world are expected to hold national elections, making it the largest year for global democracy. Against a backdrop of geopolitical tensions and economic instability, significant political change is happening:

- elections in Europe have seen far-right parties make serious gains, including the Netherlands and France
- the UK's Conservative Party were heavily defeated after 14 years
- the US election could see the comeback of former President Donald Trump with Kamala Harris replacing Joe Biden as Democratic Party candidate.

MACRO-ECONOMIC VOLATILITY

Geopolitical instability and conflict continue to be a significant risk to global economic growth. Economic volatility and uncertainty remain high, although interest rates in the UK and Europe have recently seen 25 bps cuts, it is anticipated a cautious approach will be taken to any further cuts with the key focus on keeping inflation low and stable. The information in the following pages has taken account of these external risk factors.

Risk strategy and risk appetite

Chesnara group and its divisions have a defined risk strategy and supporting Risk Appetite Framework to embed an effective Risk Management Framework, culture and processes at its heart and to create a holistic, transparent and focused approach to risk identification, assessment, management, monitoring and reporting.

On the recommendation of the Audit & Risk Committee, the Chesnara board approves a set of risk preferences which articulate, in simple terms, the desire to increase, maintain, or reduce the level of risk taking for each main category of risk. The risk position of the business is monitored against these preferences using risk tolerance limits, where appropriate, and they are taken into account by the management teams across the group when taking strategic or operational decisions.

Risk and Control Policies

Chesnara has a set of Risk and Control Policies that set out the key policies. processes and controls to be applied. Senior management are responsible for the day-to-day implementation of the Risk and Control Board Policies. Subject to the materiality of changes, the Chesnara board approves the review, updates and attestation of these policies at least annually.

Risk identification

The group maintains a register of risks which are specific to its activity and scans the horizon to identify potential risk events (e.g. political; economic; technological; environmental, legislative and social).

On an annual basis the board approves, on the recommendation of the Audit & Risk Committee, the materiality criteria to be applied in the risk scoring and in the determination of what is considered to be a principal risk. At least quarterly the principal and emerging risks are reported to the relevant boards, assessing their proximity, probability and potential impact.

Own Risk and Solvency Assessment (ORSA)

On an annual basis, or more frequently if required, the group produces a group ORSA Report which aggregates the divisional ORSA findings and supplements these with an assessment specific to group activities. The group and divisional ORSA policies outline the key processes and contents of these reports.

The Chesnara board is responsible for approving the ORSA, including steering in advance how the assessment is performed and challenging the results.

The primary objective of the ORSA is to support the company's strategic decision making, by providing insights into the company's risks profile over the business planning horizon. Effective ORSA reporting supports the board, in its role of protecting the viability and reputation of the company, reviewing and challenging management's strategic decisions and recommendations.

Risk Management System effectiveness

The group and its divisions undertake a formal annual review of and attestation to the effectiveness of the Risk Management System. The assessment considers the extent to which the Risk Management System is embedded.

The Chesnara board is responsible for monitoring the Risk Management System and its effectiveness across the group. The outcome of the annual review is reported to the group board which make decisions regarding its further development.

RISK MANAGEMENT · PRINCIPAL RISKS AND UNCERTAINTIES

The following tables outline the principal risks and uncertainties of the group. It has been drawn together following regular assessment, performed by the Audit & Risk Committee, of the principal risks facing the group, including those that would threaten its business model, future performance, solvency or liquidity. The impacts are not quantified in the tables. However, by virtue of the risks being defined as principal, the impacts are potentially significant. Those risks with potential for a material financial impact are covered within the sensitivities on page 24.

MODEL RISK	PR10

INVESTMENT AND LIQUIDITY RISK

PR₁

DESCRIPTION

Exposure to financial losses or value reduction arising from adverse movements in currency, investment markets, counterparty defaults, or through inadequate asset liability matching.

RISK APPETITE

The group accepts this risk but has controls in place to prevent any increase or decrease in the risk exposure beyond set levels. These controls will result in early intervention if the amount of risk approaches those limits.

POTENTIAL IMPACT

Market risk results from fluctuations in asset values, foreign exchange rates and interest rates and has the potential to affect the group's ability to fund its commitments to customers and other creditors, as well as pay a return to shareholders.

RISK

CLIMATE CHANGE With greater global emphasis being placed on environmental and social factors when selecting investment strategies, the group has a particular emerging exposure to 'transition risk' arising from changing preferences and influence of, in particular, institutional investors. This has the potential to result in adverse investment returns on any assets that perform poorly as a result of 'ESG transition'. Chesnara has established a 'Sustainability Programme' to embed Chesnara's sustainability strategy.

GEOPOLITICAL RISK

Ongoing global conflict, including more recently in the Middle East, brings continued volatility to financial markets. This creates additional risk of poor mid-term performance on shareholder and policyholder assets.

REGULATORY CHANGE RISK

PR₂

DESCRIPTION

The risk of adverse changes in industry practice/regulation, or inconsistent application of regulation across territories.

RISK APPETITE

The group aims to minimise any exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.

POTENTIAL **IMPACT**

Chesnara currently operates in three regulatory domains and is therefore exposed to potential for inconsistent application of regulatory standards across divisions, such as the imposition of higher capital buffers over and above regulatory minimum requirements. Potential consequences of this risk for Chesnara are the constraining of efficient and fluid use of capital within the group or creating a non-level playing field with respect to future new business/acquisitions.

Regulatory developments continue to drive a high level of change activity across the group, with items such as Consumer Duty, Operational Resilience, Climate Change/ESG and Digital Operational Resilience Act (DORA) being particularly high profile. Such regulatory initiatives carry the risk of expense overruns should it not be possible to adhere to them in a manner that is proportionate to the nature and scale of Chesnara's businesses. The group is therefore exposed to the risk of:

- incurring one-off costs of addressing regulatory change as well as any permanent increases in the cost base in order to meet enhanced standards;
- erosion in value arising from pressure or enforcement to reduce future policy charges;
- erosion in value arising from pressure or enforcement to financially compensate for past practice; and
- regulatory fines or censure in the event that it is considered to have breached standards or fails to deliver changes to the required regulatory standards on a timely basis.

RISK MANAGEMENT · PRINCIPAL RISKS AND UNCERTAINTIES (CONTINUED)

DESCRIPTION The risk of failure to source acquisitions that meet Chesnara's criteria or the execution of acquisitions with subsequent unexpected financial losses or value reduction.

RISK APPETITE Chesnara has a patient approach to acc

Chesnara has a patient approach to acquisition and generally expects acquisitions to enhance EcV and expected cash generation in the medium term (net of external financing), though each opportunity will be assessed on its own merits.

POTENTIAL IMPACT

The acquisition element of Chesnara's growth strategy is dependent on the availability of attractive future acquisition opportunities. Hence, the business is exposed to the risk of a reduction in the availability of suitable acquisition opportunities within Chesnara's current target markets, for example arising as a result of a change in competition in the consolidation market or from regulatory change influencing the extent of life company strategic restructuring.

Through the execution of acquisitions, Chesnara is also exposed to the risk of erosion of value or financial losses arising from risks inherent within businesses or funds acquired which are not adequately priced for or mitigated as part of the transaction.

DEMOGRAPHIC EXPERIENCE RISK

PR4

DESCRIPTION
RISK APPETITE

Risk of adverse demographic experience compared with assumptions (such as rates of mortality, morbidity, persistency etc.).

The group accepts this risk but restricts its exposure, to the extent possible, through the use of reinsurance and other controls. Early warning trigger monitoring is in place to track any increase or decrease in the risk exposure beyond a set level, with action taken to address any impact as necessary.

POTENTIAL IMPACT

In the event that demographic experience (rates of mortality, morbidity, persistency etc.) varies from the assumptions underlying product pricing and subsequent reserving, more or less profit will accrue to the group.

The effect of recognising any changes in future demographic assumptions at a point in time would be to crystallise any expected future gain or loss on the balance sheet.

If mortality or morbidity experience is higher than that assumed in pricing contracts (i.e. more death and sickness claims are made than expected), this will typically result in less profit accruing to the group.

If persistency is significantly lower than that assumed in product pricing and subsequent reserving, this will typically lead to reduced group profitability in the medium to long term, as a result of a reduction in future income arising from charges on those products. The effects of this could be more severe in the case of a one-off event resulting in multiple withdrawals over a short period of time (a 'mass lapse' event).

MACRO-ECONOMIC VOLATILITY Cost of living pressures could give rise to higher surrenders and lapses should customers face personal finance pressures and not be able to afford premiums or need to access savings. Currently there has been no evidence of changes in behaviours. Chesnara continues to monitor closely and respond appropriately.

Any prolonged stagnation of the property market could reduce protection business sales compared to plan, particularly in the Netherlands.

EXPENSE RISK PR5

DESCRIPTION Risk of expense overruns and unsustainable unit cost growth.

RISK APPETITEThe group aims to minimise its exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.

POTENTIAL IMPACT

The group is exposed to expenses being higher than expected as a result of one-off increases in the underlying cost of performing key functions, or through higher inflation of variable expenses.

A key underlying source of potential increases in regular expense is the additional regulatory expectations on the sector.

For the closed funds, the group is exposed to the impact on profitability of fixed and semi-fixed expenses, in conjunction with a diminishing policy base.

For the companies open to new businesses, the group is exposed to the impact of expense levels varying adversely from those assumed in product pricing. Similar, for acquisitions, there is a risk that the assumed costs of running the acquired business allowed for in pricing are not achieved in practice, or any assumed cost synergies with existing businesses are not achieved.

MACRO-ECONOMIC VOLATILITY The cost of living and energy crisis has driven increases in material supplier costs and wage inflation remains high, directly impacting the group's internal costs. Consideration is being continually given to balance the desire to grow the business and ensuring we have the capabilities and capacity to support that growth whilst continuing to keep tight cost control and also seeking opportunities to exploit efficiencies/synergies.

RISK MANAGEMENT · PRINCIPAL RISKS AND UNCERTAINTIES (CONTINUED)

PR6 **OPERATIONAL RISK**

DESCRIPTION

Significant operational failure/business continuity event.

RISK APPETITE

The group aims to minimise its exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.

POTENTIAL IMPACT

The group and its subsidiaries are exposed to operational risks which arise through daily activities and running of the business. Operational risks may, for example, arise due to technical or human errors, failed internal processes, insufficient personnel resources or fraud caused by internal or external persons. As a result, the group may suffer financial losses, poor customer outcomes, reputational damage, regulatory intervention or business plan failure.

Part of the group's operating model is to outsource support activities to specialist service providers. Consequently, a significant element of the operational risk arises within its outsourced providers.

Operational resilience remains a key focus for the business and high on the regulatory agenda following the regulatory changes published by the BoE, PRA and FCA. Chesnara continues to progress activity under the UK operational resilience project.

DORA entered into force in January 2023 and will apply from January 2025. It aims at strengthening the IT security of financial entities such as banks, insurance companies and investment firms and making sure that the financial sector in Europe is able to stay resilient in the event of a severe operational disruption.

IT/DATA SECURITY & CYBER RISK

PR7

DESCRIPTION

Risk of IT/ data security failures or impacts of malicious cyber-crime (including ransomware) on continued operational stability.

RISK APPETITE

The group aims to minimise its exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.

POTENTIAL IMPACT

Cyber risk is a growing risk affecting all companies, particularly those who are custodians of customer data. The most pertinent risk exposure relates to information security (i.e. protecting business sensitive and personal data) and can arise from failure of internal processes and standards, but increasingly companies are becoming exposed to potential malicious cyber-attacks, organisation specific malware designed to exploit vulnerabilities, phishing attacks etc. The extent of Chesnara's exposure to such threats also includes third party service providers.

The potential impact of this risk includes financial losses, inability to perform critical functions, disruption to policyholder services, loss of sensitive data and corresponding reputational damage or fines.

GEOPOLITICAL RISK

Geopolitical unrest heightens the risk of cyber-crime campaigns, particularly originating from Russia and there continues to be an increased trend in state sponsored cyber-attacks from Russia following Sweden officially joining NATO. Although Chesnara is not considered to be a direct target of any such campaigns, all business units have confirmed that they have increased monitoring and detection/ protection controls in relation to the increased threat.

NEW BUSINESS RISK

PR8

DESCRIPTION

Adverse new business performance compared with projected value.

RISK APPETITE

Chesnara does not wish to write new business that does not generate positive new business value (on a commercial basis) over the business planning horizon.

POTENTIAL IMPACT

If new business performance is significantly lower than the projected value, this will typically lead to reduced value growth in the medium to long term. A sustained low level performance may lead to insufficient new business profits to justify remaining open to new business.

MACRO-**ECONOMIC VOLATILITY**

Increased expenses and price pressure remains a risk for the ongoing viability of writing profitable new business across the group and the Swedish transfer market remains active following regulatory changes which give greater transfer freedom.

There is a risk that this persists longer than expected resulting in lower sales than expected in the business plan.

Market share is currently being maintained in the Netherlands with activity to look at some broader wealth products.

In Sweden action is being taken to diversify distribution partners whilst expanding product offering across unit-linked, custodian and life & health markets.

And there is now a meaningful contribution from the UK, primarily through the onshore bond wrapper acquired as part of the CASLP (formerly Sanlam Life & Pensions UK) deal which remains open to new business.

RISK MANAGEMENT · PRINCIPAL RISKS AND UNCERTAINTIES (CONTINUED)

PR9 **REPUTATIONAL RISK**

DESCRIPTION

Poor or inconsistent reputation with customers, regulators, investors, staff or other key stakeholders/counterparties.

RISK APPETITE

The group aims to minimise its exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.

POTENTIAL IMPACT

The group is exposed to the risk that litigation, employee misconduct, operational failures, the outcome of regulatory investigations, press speculation and negative publicity, disclosure of confidential client information (including the loss or theft of customer data), IT failures or disruption, cyber security breaches and/or inadequate services, amongst others, whether true or not, could impact its brand or reputation. The group's brand and reputation could also be affected if products or services recommended by it (or any of its intermediaries) do not perform as expected (whether or not the expectations are realistic) or in line with the customers' expectations for the product range.

Any damage to the group's brand or reputation could cause existing customers or partners to withdraw their business from the group, and potential customers or partners to elect not to do business with the group and could make it more difficult for the group to attract and retain qualified employees.

CLIMATE CHANGE RISK

Given the global focus on climate change as well as the significant momentum in the finance industry, the group is exposed to strategic and reputational risks arising from its action or inaction in response to climate change as well the regulatory and reputational risks arising from its public disclosures on the matter. Chesnara supports the UN Sustainable Development Goals (SDGs), including Climate Action. We have set our long-term net zero targets, interim targets for 2030 and short-term actions including baselining our financial emissions and beginning work to create our transition plan to be a net zero group.

Chesnara has mobilised a group-wide sustainability project programme in relation to the broader sustainability agenda, making commitments to:

- Become a net zero emitter
- Invest in positive solutions
- Provide inclusivity for all stakeholders

MODEL RISK	PR10
DESCRIPTION	Adverse consequences from decisions based on incorrect or misused model outputs, or fines or reputational impacts from disclosure of materially incorrect or misleading information.
RISK APPETITE	The group aims to minimise its exposure to this risk, to the extent possible, but acknowledges that it may need to accept some risk as a result of carrying out business.
POTENTIAL IMPACT	Chesnara and each of its subsidiaries apply statistical, economic and financial techniques and assumptions to process input data into quantitative estimates. Inaccurate model results may lead to unexpected losses arising from inaccurate data, assumptions, judgements, programming errors, technical errors, and misinterpretation of outputs.
	Potential risk impacts of inaccurate model results include:
	 Poor decisions, for example regarding business strategy, operational decisions, investment choices, dividend payments or acquisitions;
	 Potentially overestimating the value of acquisitions resulting in over payment;
	- Misstatement of financial performance or solvency, resulting in misleading key shareholders or fines; and
	- Provision of inaccurate information to the board on business performance resulting in poorly informed or delayed decisions.

GOING CONCERN STATEMENT

Going concern

After making appropriate enquiries, including consideration of the economic uncertainty in the wake of a high-inflation environment on the group's operations, financial position and prospects, the directors confirm that they are satisfied that the company and the group have adequate resources to continue in business for the foreseeable future. Accordingly, they continue to adopt the going concern basis in the preparation of the financial statements.

In performing this work, the board has considered the current solvency and cash position of the group and company, coupled with the group's and company's projected solvency and cash position as highlighted in the most recent business plan and Own Risk and Solvency Assessment (ORSA) process. These processes consider the financial projections of the group and its subsidiaries on both a base case and a range of stressed scenarios, covering projected solvency, liquidity, EcV and IFRS positions. In particular these projections assess the cash generation of the life insurance divisions and how these flow up into the Chesnara parent company balance sheet, with these cash flows being used to fund debt repayments, shareholder dividends and the head office function of the parent company. Further insight into the immediate and longer-term impact of certain scenarios, covering solvency, cash generation and Economic Value, can be found on page 24 under the section headed 'Capital Management Sensitivities'. The directors believe these scenarios will encompass any potential future impact of the prevailing economic uncertainty on the group, as Chesnara's most material ongoing exposure to both potential threats are any associated future investment market impacts. Underpinning the projections process outlined above are a number of assumptions. The key ones include:

- We do not assume that a future acquisition needs to take place to make this assessment.
- We make long-term investment return assumptions on equities and fixed income securities.
- The base case scenario assumes exchange rates remain stable, and the impact of adverse rate changes are assessed through scenario analysis.
- Levels of new business volumes and margins are assumed.
- The projections apply the most recent actuarial assumptions, such as mortality and morbidity, lapses and expenses.

The group's strong capital position and business model, provides a good degree of comfort that although the economic uncertainty in the wake of a high-inflation environment has the potential to cause further significant global economic disruption, the group and the company remain well capitalised and has sufficient liquidity. As such we can continue to remain confident that the group will continue to be in existence in the foreseeable future. The information set out on pages 22 to 23 indicates a strong Solvency II position as at 30 June 2024 as measured at both the individual regulated life company levels and at the group level. As well as being well-capitalised the group also has a healthy level of cash reserves to be able to meet its debt obligations as they fall due and does not rely on the renewal or extension of bank facilities to continue trading. This position was further enhanced in early 2022, when the company announced the successful pricing of its inaugural debt capital markets issuance of £200m Tier 2 Subordinated Notes, the net proceeds of which have been used for corporate purposes, including investments and acquisitions.

The group's subsidiaries rely on cash flows from the maturity or sale of fixed interest securities which match certain obligations to policyholders, which brings with it the risk of bond default. In order to manage this risk, we ensure that our bond portfolio is actively monitored and well diversified. Other significant counterparty default risk relates to our principal reinsurers. We monitor their financial position and are satisfied that any associated credit default risk is low.

The Notes and information on pages 47 to 69 form part of these financial statements

1 Basis of preparation

This condensed set of consolidated financial statements has been prepared in accordance with International Accounting Standard 34 'Interim Financial Reporting'. As required by the Disclosure and Transparency Rules of the Financial Conduct Authority, this condensed set of consolidated financial statements has been prepared applying the accounting policies and presentation which were applied in the preparation of the group's published consolidated financial statements for the year ended 31 December 2023.

Any judgements and estimates applied in the condensed set of consolidated financial statements are consistent with those applied in the preparation of the group's published consolidated financial statements for the year ended 31 December 2023.

The financial information shown in these interim financial statements is unaudited and does not constitute statutory accounts within the meaning of Section 434 of the Companies Act 2006. The directors have elected to not obtain a review opinion over these interim financial statements by the group's auditor, Deloitte.

The comparative figures for the financial year ended 31 December 2023 are not the company's statutory accounts for that financial year. Those accounts have been reported on by the company's auditor and delivered to the Registrar of Companies. The report of the auditor was (i) unqualified, (ii) did not include a reference to any matters to which the auditor drew attention by way of emphasis without qualifying their report, and (iii) did not contain a statement under Section 498 (2) or (3) of the Companies Act 2006.

Going concern

After making appropriate enquiries, including detailed consideration of the impact on the group's operations and financial position and prospects, the directors confirm that they are satisfied that the company and the group have adequate resources to continue in business for the foreseeable future, a period of not less than 12 months from the date of this report. Accordingly, they continue to adopt the going concern basis in the preparation of these interim financial statements. Further detail on the key considerations made by the directors in making this assessment has been included in the going concern section on page 40.

Following the production of the 2023 Interim Report, certain immaterial adjustments were identified due to further updates to the IFRS 17 implementation programme. These adjustments have been applied consistently to the prior year comparatives throughout these condensed financial statements and the disclosure notes that are affected are headed up accordingly.

Standards and amendments issued but not yet effective

At the date of authorisation of these financial statements the following standards and interpretations, which are applicable to the group, and which have not been applied in these financial statements, were in issue but not yet effective:

Title	Effective date
IFRS 9/IFRS 7 Amendments to the classification and measurement of financial instruments IFRS 18 Presentation and disclosure financial statements	1 January 2026 1 January 2027

The directors do not expect that the adoption of the standards and amendments to standards listed above will have a material impact on the financial statements of the group in future periods.

2 Significant judgements and estimates

The critical accounting judgements and key sources of estimation and uncertainty remain largely unchanged from those described in Note A6 of the 2023 Annual Report and Accounts. The potential impact on the group has been considered in the preparation of these interim financial statements, including management's evaluation of critical accounting judgements and estimates. Further information on discount rates applied in these financial statements is provided below.

Discount rates

Cash flows are discounted using currency-specific, risk-free yield curves adjusted for the characteristics of the cash flows and the liquidity of the insurance contracts. The group applies a 'bottom-up' approach to determining discount rates and follows the methodology used by the PRA and EIOPA to determine risk-free yield curves and ultimate forward rates for regulatory solvency calculations. To reflect the liquidity or otherwise of the insurance contracts, the risk-free yield curves are adjusted by an illiquidity premium.

For certain Dutch 'savings mortgage' products, there is a direct connection to the policyholder's mortgage loan and the premiums to repay the loan in that the crediting rate is set such that the account value will be equal to the balance on the loan at maturity. For this product, the cash flows are discounted using the same curve used to value the corresponding mortgage assets which itself is derived from mortgage rates available in the market.

When the present value of future cash flows is estimated using stochastic modelling, the cash flows are discounted at scenario-specific rates calibrated, on average, to be the risk-free rates as adjusted for illiquidity.

Inflation rates mainly relate to expense inflation. The assumptions in respect of expense inflation reflect the group's best estimate view incorporating market consistent data such as earnings indices and central bank inflation targets.

The yield curves that were used to discount the estimates of future cash flows that were modelled deterministically are shown in the following table:

				30	June 20)24			31 De	cember	2023	
Yield curve	Broad product category	Currency	1 yr	5 yrs	10 yrs	20 yrs	30 yrs	1 yr	5 yrs	10 yrs	20 yrs	30 yrs

3 Earnings per share

Earnings per share are based on the following:

		udited ths ended		
	30	30 June		
		restated		
	2024	2023	2023	
(Loss)/profit for the period attributable to shareholders (£m) (restated)	1.0	14.7	18.7	
Weighted average number of ordinary shares	50,886,918	150,430,393	150,528,597	
Basic earnings per share	0.66p	9.79p	12.41	
Diluted earnings per share	0.65p	9.70p	12.29	

The weighted average number of ordinary shares in respect of the six months ended 30 June 2024 is based upon 150,849,587 shares in issue at the beginning of the period and 150,954,119 at the end of the period. No shares were held in treasury.

The weighted average number of ordinary shares in respect of the six months ended 30 June 2023 is based upon 150,369,603 shares in issue at the beginning of the period, and 150,570,190 shares in issue at the end of the period. No shares were held in treasury.

The weighted average number of ordinary shares in respect of the year ended 31 December 2023 is based upon 150,369,603 shares in issue at the beginning of the period and 150,849,587 shares in issue at the end of the period. No shares were held in treasury.

There were 2,456,598 share options outstanding at 30 June 2024 (30 June 2023: 1,165,272). Accordingly, there is dilution of the average number of ordinary shares in issue. There were 1,537,582 share options outstanding as at 31 December 2023.

4 Retained earnings

Unaudited	Six month 30 Ju		
		restated	
	2024	2023	
	£m	£m	
Retained earnings attributable to equity holders of the parent company comprise:			
Balance at 1 January	167.1	183.1	
Profit/(loss)for the period	1.0	14.7	
Share-based payment	0.5	0.3	
Dividends			
Final approved and paid for 2022	-	(22.8)	
Final approved and paid for 2023	(23.5)	_	
Balance at 30 June	145.1	175.3	

The interim dividend in respect of 2023, approved and paid in 2023 was paid at the rate of 8.36p per share.

The final dividend in respect of 2023, approved and paid in 2024, was paid at the rate of 15.61p per share so that the total dividend paid to the equity shareholders of the company in respect of the year ended 31 December 2023 was made at the rate of 23.97p per share.

An interim dividend of 8.61p per share in respect of the year ending 31 December 2024 is payable on 1 November 2024 to equity shareholders of the company registered at the close of business on 20 September 2024, the dividend record date, was approved by the directors after the balance sheet date. The resulting dividend of £13.0m has not been provided for in these financial statements and there are no income tax consequences.

The following table summarises dividends per share in respect of the six-month period ended 30 June 2024 and the year ended 31 December 2023:

	Six months ended 30 June 2024 Pence	Year ended 31 December 2023 Pence
Interim – approved/paid	8.61	8.36
Final – proposed/paid	-	15.61
Total	8.61	23.97

5 Operating segments

The group considers that it has no product or distribution-based business segments. It reports segmental information on the same basis as reported internally to the chief operating decision maker, which is the board of directors of Chesnara plc.

The segments of the group as at 30 June 2024 comprise:

UK: This segment comprises the UK's life insurance and pensions business within Countrywide Assured plc (CA), the group's principal UK operating subsidiary. CA contains a mix of unit-linked, with-profits and non-linked products and represents the UK acquisition vehicle, recently acquiring the onshore individual protection business of Canada Life Limited in 2023 and Sanlam Life & Pensions UK (CASLP) in 2022.

Movestic: This segment comprises the group's Swedish life and pensions business, Movestic Livförsäkring AB (Movestic) and its subsidiary company Movestic Fonder AB (investment fund management company). Movestic is open to new business and primarily comprises unit-linked pension business and also providing some life and health product offerings.

Waard Group: This segment represents the group's closed Dutch life insurance business and comprises a number of acquisitions of closed insurance books of business since the acquisition of the original Waard entities into the group in 2015. The Waard Group comprises a mixture of long-term savings and protection business and also contains some non-life business.

Scildon: This segment represents the group's open Dutch life insurance business. Scildon's policy base is predominantly made up of individual protection and savings contracts. It is open to new business and sells protection, individual savings and group pension contracts via a broker-led distribution model.

Other group activities: The functions performed by the parent company, Chesnara plc, are defined under the operating segment analysis as other group activities. Also included therein are consolidation and elimination adjustments.

The accounting policies of the segments are the same as those for the group as a whole. Any transactions between the business segments are on normal commercial terms in normal market conditions. The group evaluates performance of operating segments on the basis of the profit before tax attributable to shareholders of the reporting segments and the group as a whole. There were no changes to the measurement basis for segment profit during the period ended 30 June 2024.

9 Financial asset and liability fair value disclosures

Fair value is the amount for which an asset or liability could be exchanged between willing parties in an arm's length transaction. The tables below show the determination of fair value according to a three-level valuation hierarchy. Fair values are generally determined at prices quoted in active markets (Level 1). However, where such information is not available, the group applies valuation techniques to measure such instruments. These valuation techniques make use of market observable data for all significant inputs where possible (Level 2), but in some cases it may be necessary to estimate other than market-observable data within a valuation model for significant inputs (Level 3).

9 Financial asset and liability fair value disclosures (continued)

Investment properties

The investment properties are valued by external Chartered Surveyors using industry standard techniques based on guidance from the Royal Institute of Chartered Surveyors. The valuation methodology includes an assessment of general market conditions and sector level transactions and takes account of expectations of occupancy rates, rental income and growth. Properties undergo individual scrutiny using cash flow analysis to factor in the timing of rental reviews, capital expenditure, lease incentives, dilapidation and operating expenses; these reviews utilise both observable and unobservable inputs.

Holdings in collective investment schemes

The fair value of holdings in collective investment schemes classified as Level 2 are related to the UK segment and Scildon. These do not meet the classification as Level 1, as their fair value is determined using valuation techniques with observable market inputs. The holdings classified as Level 3 £165.4m (December 2023: £142.5m) also relate to Scildon, and represent investments held in a mortgage fund. These are classified as Level 3 as the fair value is derived from valuation techniques that include inputs that are not based on observable market data.

Policyholder funds held by the group

There is a small holding of assets classified as Level 3 amounting to £48.4m (December 2023: £42.4m) from our Movestic operation which are unlisted. The valuation of the vast majority of these assets is based on unobservable prices from trading on the over-the-counter market.

Debt securities

The debt securities classified as Level 2 at 2023 and 2024 are traded in active markets with less depth or wider-bid ask spreads. This does not meet the classification as Level 1 inputs. The fair values of debt securities not traded in active markets are determined using broker quotes or valuation techniques with observable market inputs. Financial instruments valued using broker quotes are classified at Level 2, only where there is a sufficient range of available quotes. These assets were valued using counterparty or broker quotes and were periodically validated against third-party models.

Derivative financial instruments

The derivative financial instruments include a foreign currency hedge related to the group. This was deemed to manage the exposure to foreign exchange movements between sterling and both the euro and Swedish krona.

An uncapped collar which consists of two hedges:

- One hedge to protect against the downside (sterling strengthening) (starting at strike A), and one to remove the upside (weakening) (strike B); with the strikes
 of these coordinated to result in no upfront premium.
- The 2nd hedge (strike B) creates an uncapped liquidity requirement when it bites.

The capped collar comes with an additional leg which creates value and liquidity when exchange rates move beyond a certain point (strike C).

Within derivative financial instruments is a financial reinsurance embedded derivative related to our Movestic operation. The group has entered into a reinsurance contract with a third party that has a section that is deemed to transfer significant insurance risk and a section that is deemed not to transfer significant insurance risk. The element of the contract that does not transfer significant insurance risk has two components and has been accounted for as a financial liability at amortised cost and an embedded derivative asset at fair value.

The embedded derivative represents an option to repay the amounts due under the contract early at a discount to the amortised cost, with its fair value being determined by reference to market interest rate at the balance sheet date. It is, accordingly, determined at Level 2 in the three-level fair value determination hierarchy set out above.

Investment contract liabilities

The investment contract liabilities in Level 2 of the valuation hierarchy represent the fair value of linked and non-linked liabilities valued using established actuarial techniques utilising market observable data for all significant inputs, such as investment yields.

Significant unobservable inputs in Level 3 instrument valuations

The Level 3 instruments held in the group are in relation to investments held in an Aegon managed Dutch Mortgage Fund that contains mortgage-backed assets in the Netherlands. The fair value of the mortgage fund is determined by the fund manager on a monthly basis using an in-house valuation model. The valuation model relies on a number of unobservable inputs, the most significant being the assumed conditional prepayment rate, the discount rate and the impairment rate, all of which are applied to the anticipated modelled cash flows to derive the fair value of the underlying asset.

The assumed Conditional Prepayment Rate (CPR) is used to calculate the projected prepayment cash flow per individual loan and reflects the anticipated early repayment of mortgage balances. The CPR is based on 4 variables:

- Contract age The CPR for newly originated mortgage loans will initially be low, after which it increases for a couple of years to its maximum expected value, and subsequently diminishes over time.
- Interest rate differential The difference between the contractual rates and current interest rates are positively correlated with prepayments. When contractual rates are higher than interest rates of newly originated mortgages, we observe more prepayments and the vice versa.
- Previous partial repayments Borrowers who made a partial prepayment in the past, are more likely to do so in the future.
- Burnout effect Borrowers who have not made a prepayment in the past, while their option to prepay was in the money, are less likely to prepay in the future.

The projected prepayment cash flows per loan are then combined to derive an average expected lifetime CPR, which is then applied to the outstanding balance of the fund. The CPR used in the valuation of the fund as at 30 June 2024 was 3.2% (31 December 2023: 3.2%).

9 Financial asset and liability fair value disclosures (continued)

Significant unobservable inputs in Level 3 instrument valuations (continued)

The expected projected cash flows for each mortgage within the loan portfolio are discounted using rates that are derived using a matrix involving the following three parameters:

- The remaining fixed rate term of the mortgage
- Indexed Loan to Value (LTV) of each mortgage
- Current (Aegon) mortgage rates

At 30 June 2024 this resulted in discounting the cash flows in each mortgage using a range from 4.70% to 4.77% (31 December 2023: 4.67% to 4.68%).

An impairment percentage is applied to those loan cash flows which are in arrears, to reflect the chance of the loan actually going into default. For those loans which are 1, 2 or 3 months in arrears, an impairment percentage is applied to reflect the chance of default. This percentage ranges from 0.60% for 1 month in arrears to 13.70% for loans which are 3 months in arrears (31 December 2023: 0.60% for 1 month in arrears to 13.70% for loans which are 3 months in arrears). Loans which are in default receive a 100% reduction in value.

The value of the fund has the potential to decrease or increase over time. This can be as a consequence of a periodic reassessment of the conditional prepayment rate and/or the discount rate used in the valuation model.

- A 1 percent increase in the CPR would reduce the value of the asset by £2.2m (31 December 2023: £1.9m).
- A 1 percent decrease in the CPR would increase the value of the asset by £2.3m (31 December 2023: £2.1m).
- A 1 percent increase in the discount rate would reduce the value of the asset by £12.7m (31 December 2023: £11.4m).
- A 1 percent decrease in the discount rate would increase the value of the asset by £14.7m (31 December 2023: £13.3m)

At the end of period	309.9	273.0

Unaudited	Carry Unaudited	Carrying amount Unaudited		air value
	30 June 2024 £m	31 December 2023 £m	30 June 2024 £m	31 December 2023 £m
Financial liabilities Borrowings	206.1	207.9	168.3	155.4

Borrowings consist of the Tier 2 debt and an amount due in relation to financial reinsurance. The fair value of the Tier 2 debt is calculated using quoted prices in active markets and they are classified as Level 1 in the fair value hierarchy. The amount due in relation to financial reinsurance is fair valued with reference to market interest rates at the balance sheet date.

There were no transfers between Levels 1, 2 and 3 during the period. The group holds no Level 3 liabilities as at the balance sheet date.

11 Borrowings

	Unaudited 30 June 2024 £m	31 December 2023 £m
Tier 2 debt	200.7	200.6
Amount due in relation to financial reinsurance	3.6	5.3
Other	1.8	2.0
Total	206.1	207.9

The fair value of amounts due in relation to Tier 2 debt at 30 June 2024 was £168.4m (31 December 2023: £148.4m).

The fair value of amounts due in relation to financial reinsurance at 30 June 2024 was £3.0m (31 December 2023: £5.1m).

Term finance comprises capital amounts outstanding on mortgage bonds taken out over properties held in the unit-linked policyholder funds in the UK. The mortgage over each such property is negotiated separately, varies in term from 5 to 20 years, and bears interest at fixed or floating rates that are agreed at the time of inception of the mortgage. The fair value of the term finance is not materially different to the carrying value shown above.

12 Approval of interim financial statements for the six months ended 30 June 2024

This condensed set of consolidated financial statements has been approved by the board of directors on 9 September 2024. A copy of this report will be available to the public at the company's registered office, 2nd Floor, Building 4, West Strand Business Park, West Strand Road, Preston, PR1 8UY and at www.chesnara.co.uk

ALTERNATIVE PERFORMANCE MEASURES

Throughout this Half Year Report we use Alternative Performance Measures (APMs) to supplement the assessment and reporting of the performance of the group. These measures are those that are not defined by statutory reporting frameworks, such as IFRS or Solvency II.

The APMs aim to assess performance from the perspective of all stakeholders, providing additional insight into the financial position and performance of the group and should be considered in conjunction with the statutory reporting measures such as IFRS and Solvency II.

The following table identifies the key APMs used in this report, how each is defined and why we use them. Further information can be found throughout the financial review (pages 25 to 33).

APM	WHAT IS IT?	WHY DO WE USE IT?	REF
Group cash generation	Cash generation is used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed.	Cash generation is a key measure, because it is the net cash flows to Chesnara from its life and pensions businesses which support Chesnara's dividend-paying capacity and acquisition strategy. Cash generation	See cash generation on page 27 and reconciliation on page 75
	Group cash generation is calculated as the movement in the group's surplus Own Funds above the group's internally required capital, as determined by applying the group's Capital Management Policy, which has Solvency II rules at its heart.	can be a strong indicator of how we are performing against our stated objective of 'maximising value from existing business'.	
Divisional cash generation	Cash generation is used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed.	It is an important indicator of the operating performance of the business before the impact of group level operations and consolidation adjustments.	See cash generation on page 27
	Divisional cash generation represents the movement in surplus Own Funds above local capital management policies within the three operating divisions of Chesnara. Divisional cash generation is used as a measure of how much dividend potential a division has generated, subject to ensuring other constraints are managed.		
cash generation of assess been gen are mana Commer of technic corporate	Cash generation is used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed.	Commercial cash generation aims to provide stakeholders with enhanced insight into cash generation, drawing out components of the result relating to technical complexities or exceptional	See cash generation on page 27
	Commercial cash generation excludes the impact of technical adjustments, modelling changes and corporate acquisition activity; representing the inherent commercial cash generated by the business.	items. The result is deemed to better reflect the group's view of commercial performance, showing key drivers within that.	
Economic Value (EcV)	EcV is a financial metric that is derived from Solvency II Own Funds. It provides a market consistent assessment of the value of existing insurance businesses, plus adjusted net asset value of the non-insurance business within the group.	EcV aims to reflect the market-related value of in-force business and net assets of the non-insurance business and hence is an important reference point by which to assess Chesnara's value. A life and pensions group may typically be characterised as trading at a	See EcV analysis on page 30
	We define EcV as being the Own Funds adjusted for contract boundaries, risk margin and restricted with-profit surpluses. As such, EcV and Own Funds have many common characteristics and tend to be impacted by the same factors.	discount or premium to its Economic Value. Analysis of EcV provides additional insight into the development of the business over time. The EcV development of the Chesnara group over time can be a strong indicator of how we have delivered to our strategic objectives.	

ALTERNATIVE PERFORMANCE MEASURES (CONTINUED)

APM	WHAT IS IT?	WHY DO WE USE IT?	REF
Economic Value (EcV) earnings	The principal underlying components of the EcV earnings are: - The expected return from existing business (being the effect of the unwind of the rates used to discount the value in-force); - Value added by the writing of new business; - Variations in actual experience from that assumed in the opening valuation; - The impact of restating assumptions underlying the determination of expected cash flows; and - The impact of acquisitions.	By recognising the market-related value of in-force business (in-force value), a different perspective is provided in the performance of the group and on the valuation of the business. EcV earnings are an important KPI as they provide a longer-term measure of the value generated during a period. The EcV earnings of the group can be a strong indicator of how we have delivered against all three of our core strategic objectives.	See Economic Value (EcV) Earnings on page 29
EcV operating earnings	This is the element of EcV earnings (see above) that is generated from the company's ongoing core business operations, excluding any profit earned from investment market conditions in the period and any economic assumption changes in the future.	EcV operating earnings are important as they provide an indication of the underlying value generated by the business. It can help identify profitable activities and also inefficient processes and potential management actions.	See EcV Earnings Analysis on page 29
EcV economic earnings	This is the element of EcV earnings (see above) that are derived from investment market conditions in the period and any economic assumption changes in the future.	EcV economic earnings are important in order to measure the additional value generated from investment market factors.	See EcV Earnings Analysis on page 29
Commercial new business profit	A more commercially relevant measure of new business profit than that recognised directly under the Solvency II regime, allowing for a modest level of return, over and above risk-free, and exclusion of the incremental risk margin Solvency II assigns to new business.	This provides a fair commercial reflection of the value added by new business operations and is more comparable with how new business is reported by our peers, improving market consistency.	See business review section on pages 15 to 20
Solvency	Solvency is a fundamental financial measure which is of paramount importance to investors and policyholders. It represents the relationship between the value of the business as measured on a Solvency II basis and the capital the business is required to hold – the Solvency Capital Requirement (SCR). Solvency can be reported as an absolute surplus value or as a ratio.	Solvency gives policyholders comfort regarding the security of their provider. This is also the case for investors together with giving them a sense of the level of potential surplus available to invest in the business or distribute as dividends, subject to other considerations and approvals.	See capital management section on pages 22 to 24
Funds Under Management (FuM)	FuM reflects the value of the financial assets that the business manages, as reported in the IFRS Consolidated Balance Sheet.	FuM is important as it provides an indication of the scale of the business, and the potential future returns that can be generated from the assets that are being managed.	See Consolidated Balance Sheet on page 44
Acquisition value gain (incremental value)	Acquisition value gains reflect the incremental Economic Value added by a transaction, exclusive of any additional risk margin associated with absorbing the additional business.	The EcV gain from acquisition will be net of any associated increase in risk margin. The risk margin is a temporary Solvency II dynamic which will run off over time.	
Leverage/ gearing	A financial measure that demonstrates the degree to which the company is funded by debt financing versus equity capital, presented as a ratio. It is defined as debt divided by debt plus equity, with the equity denominator adding back the net of tax CSM liability, as measured under IFRS.	cing level of indebtedness of Chesnara, and it is also a Balance S key component of the bank covenant arrangements on page 3 th the held by Chesnara.	
IFRS capital base	This is the IFRS net equity for the group plus the consolidated CSM net of reinsurance and tax.	It is a better measure of the value of the business than net equity as it takes into account the store of deferred profits held in the balance sheet, as represented by the CSM, including those as yet unrecognised profits from writing new business and acquisitions.	See IFRS Income Statement on page 32
Policies/policy count	Policy count is the number of policies that the group manages on behalf of customers.	This is important to show the scale of the business, particularly to provide context to the rate at which the closed-book business is maturing. In our open businesses, the policy count shows the net impact of new business versus policy attrition.	

RECONCILIATION OF METRICS

The diagram below shows the interaction between the IFRS metrics and the Alternative Performance Measures used by the group.

FINANCIAL STATEMENTS ADDITIONAL METRICS Solvency II valuation Capital requirements IFRS net assets (Own Funds) R f330.3m £656.4m **IFRS** profits **Economic Value** Solvency Stakeholder focus: P Policyholders Investors Regulators **New business** Cash generation В Business partners Key performance indicators

As shown above, the key interaction between our statutory reporting rules under IFRS and the Alternative Performance Measures is with the Solvency II valuation and the Own Funds balance. A reconciliation from IFRS net assets to Solvency II Own Funds is shown below:

£m	30 Jun 2024	31 Dec 2023	Rationale
Group IFRS net assets	330.3	359.9	
Removal of intangible assets; AVIF, DAC and DIL	(90.8)	(94.9)	Intangible assets that cannot be sold separately have no intrinsic value under Solvency II rules.
Removal of IFRS reserves, net of reinsurance	11,522.3	11,071.0	Actuarial reserves are calculated differently between the two methodologies and
Inclusion of SII technical provisions, net of reinsurance	(11,302.7)	(10,853.3)	hence IFRS reserves are replaced with Solvency II technical provisions. The main differences in methodology are discussed further below.
Other valuation differences	2.4	0.4	Other immaterial valuation differences.
Mortgage loan valuation difference	44.9	32.3	Valuation difference of the Mortgage debt between IFRS and SII.
Deferred tax valuation differences	(11.9)	(8.1)	These are the deferred tax impacts as a result of the adjustments above.
Foreseeable dividends	(13.0)	(23.5)	Under Solvency II rules, future 'foreseeable dividends' are required to be recognised within Own Funds. Under IFRS rules, dividends are recognised when paid.
Tier 2 debt valuation differences	37.2	52.2	Valuation difference of Tier 2 debt between IFRS and SII.
Tier 2 debt under SII	163.5	148.4	Tier 2 capital plus the restriction placed on the subordinated debt within Own Funds
Tier 2/3 restrictions	(25.1)	(0.3)	under Solvency II requirements.
Ring-fenced surpluses	(0.7)	(0.5)	Solvency II requires that Own Funds are reduced by any surpluses that are restricted. For Chesnara this relates to surpluses within the two S&P with-profits funds,
Group SII Own Funds	656.4	683.7	which are temporarily restricted. These restrictions are removed through periodic capital transfers.

The main differences between the two methodologies for calculating actuarial reserves are as follows:

- Under IFRS 9 the value of investment contracts is taken as the unit liability whilst under Solvency II a non-unit reserve and Risk Margin are required.
- Best estimate assumptions are used for both IFRS 17 and Solvency II, however the former requires the CSM to be held for which there is no equivalent under Solvency II.
- Both bases require a margin for adverse deviation, respectively the Risk Adjustment and the Risk Margin, but whilst the approach used is very similar the cost of capital applied is different.
- For the most part the yield curves adopted for discounting under IFRS 17 are very similar to those used in Solvency II, the exception being that for certain Dutch 'savings mortgage' products the IFRS 17 liabilities use a yield curve derived from mortgage rates available in the market.
- The reserve for future expenses held in Chesnara plc under Solvency II is not permitted under IFRS.
- Other valuation differences relate to the definition of contract boundary and the allowability, or otherwise, of certain expenses such as investment management expenses on products where no investment service is provided.

RECONCILIATION OF METRICS (CONTINUED)

Solvency II position

Solvency II is the solvency regime that applies to the group. Over and above IFRS, Solvency II imposes a capital requirement on the group.

A summary of the solvency position of the group at 30 June 2024 and 31 December 2023 is as follows:

£m	30 Jun 2024	31 Dec 2023
Group SII Own Funds (OF)	656.4	683.7
Solvency Capital Requirement (SCR)	326.1	332.7
Solvency surplus	330.3	351.0
Solvency ratio	201%	205%

Cash generation

Cash generation is used by the group as a measure of assessing how much dividend potential has been generated, subject to ensuring other constraints are managed. Group cash generation is calculated as the movement in the group's surplus Own Funds above the group's internally required capital, as determined by applying the group's Capital Management Policy, which has Solvency II rules at its heart. For further information on cash generation please refer to page 72 and the Financial Review section.

Cash generation can be derived from the opening and closing solvency positions as follows:

	£m
Opening Solvency II surplus:	
Own Funds – 31 Dec 2023	683.7
Remove Tier 2 debt at book value	(200.0)
SCR – 31 Dec 2023	(332.7)
Add back Own Funds restriction	0.5
Additional capital to meet normal internal operating range (40% of SCR)	(133.1)
Surplus available for distribution – 31 Dec 2023	18.4
Closing Solvency II surplus:	
Own Funds – 30 Jun 2024	656.4
Remove Tier 2 debt at book value	(200.0)
SCR – 30 Jun 2024	(326.1)
Add back Own Funds restriction	0.7
Additional capital to meet normal internal operating range (40% of SCR)	(130.4)
Surplus available for distribution – 30 Jun 2024	0.5

The closing Solvency II position at 30 June 2024 reflects payment of the final 2023 dividend of £23.5m paid during the period and reflects a foreseeable dividend of £13.0m due to be paid later in 2025. As these are distributions to shareholders, akin to IFRS profit reporting, these do not form part of the cash generation metric and should be excluded. Consequently, group cash generation can be derived as follows:

	£m
Closing surplus available for distribution less opening available surplus for distribution	17.9
Add back: Movement in Tier 3 asset and restrictions	24.6
Add back: Foreseeable year end dividend	13.0
Group cash generation	19.6

Cautionary and forward looking statements

This document has been prepared for the members of Chesnara plc and no one else. Chesnara plc, its directors or agents do not accept or assume responsibility to any other person in connection with this document and any such responsibility or liability is expressly disclaimed. Nothing in this document should be construed as a profit forecast or estimate.

This document may contains, and we may make other statements (verbal or otherwise) containing, forward-looking statements with respect to certain of the plans and current expectations relating to the future financial condition, business performance, and results, strategy and/or objectives (including without limitation, climate-related plans and goals) of Chesnara plc.

Statements containing the words 'believes', 'intends', 'will', 'expects', 'plans', 'aims', 'seeks', 'targets', 'continues' and 'anticipates' or other words of similar meaning are forward looking.

By their nature, all forward-looking statements involve risk and uncertainty because they relate to future events and circumstances that are beyond the control of Chesnara plc including, amongst other things, UK domestic, Swedish domestic, Dutch domestic and global economic, political, social, environmental and business conditions, market-related risks such as fluctuations in interest rates, currency exchange rates, inflation, deflation, the impact of competition, changes in customer preferences, delays in implementing proposals, the timing, impact and other uncertainties of future acquisitions or other combinations within relevant industries, the policies and actions of regulatory authorities, the impact of tax or other legislation and other regulations in the jurisdictions in which Chesnara plc and its subsidiaries operate. As a result, Chesnara plc's actual future condition, business performance and results may differ materially from the plans, goals and expectations expressed or implied in these forward-looking statements.

No representation is made with regard to forward looking statements, including that any future results will be achieved. As a result, you are cautioned not to place undue reliance on such forward-looking statements contained in this document. Chesnara undertakes no obligation to update any of the forward-looking statements contained within this document or any other forward-looking statements we make. Forward-looking statements in this report are current only as of the date on which such statements are made.

The climate metrics used in this document should be treated with special caution, as they are more uncertain than, for example, historical financial information and given the wider uncertainty around the evolution and impact of climate change. Climate metrics include estimates of historical emissions and historical climate change and forward-looking climate metrics (such as ambitions, targets, climate scenarios and climate projections and forecasts). Our understanding of climate change and its impact continue to evolve. Accordingly, both historical and forward-looking climate metrics are inherently uncertain and Chesnara expects that certain climate disclosures made in this document are likely to be amended, updated, recalculated or restated in the future.
