

M&G Sustainable Multi Asset Fund Sterling Class I – Accumulation shares

Monthly Fund Review as at 31 March 2024
For investment professionals only

Highlights

- Global investors remained largely convinced that a path to lower interest rates was in sight, a view aided by the US Fed which again signalled its intention to make multiple cuts this year. This view buoyed most equity markets during March, and the fund benefited from its broad exposure to the market, particularly its holdings in the UK and Asia ex Japan. Performance among the fund's bond holdings was more muted but also positive.
- Given the recent resilience of US macroeconomic data and its potential to put pressure on inflation and interest rate expectations, the fund reduced its holdings of 5-year US Treasuries in favour of 30-year German bunds. Excess cash was used to increase the fund's overall US dollar exposure.
- The fund also recycled some names among its positive impact equity holdings, bringing its exposure up to date with the latest recommendations from M&G's impact investing team. Finally, the fund reduced its EM sovereign bond exposure slightly.

The main risks associated with this fund

For any past performance shown, please note that past performance is not a guide to future performance. The value and income from the fund's assets will go down as well as up. This will cause the value of your investment to fall as well as rise. There is no guarantee that the fund will achieve its objective and you may get back less than you originally invested.

Investments in bonds are affected by interest rates, inflation and credit ratings. It is possible that bond issuers will not pay interest or return the capital. All of these events can reduce the value of bonds held by the fund.

The fund is exposed to different currencies. Derivatives are used to minimise, but may not always eliminate, the impact of movements in currency exchange rates.

The fund may use derivatives to profit from an expected rise or fall in the value of an asset. Should the asset's value vary in an unexpected way, the fund will incur a loss. The fund's use of derivatives may be extensive and exceed the value of its assets (leverage). This has the effect of magnifying the size of losses and gains, resulting in greater fluctuations in the value of the fund.

Further risk factors that apply to the fund can be found in the fund's Prospectus.

Any ongoing charge figure with * indicates an estimate. The ongoing charge figure may vary from year to year and excludes portfolio transaction costs. The charges are mostly, if not exclusively, the Annual Charge which may be discounted depending on the size of the fund. For further details, please see the fund's Key Investor Information Document (KIID). The fund's annual report for each financial year will include details on the exact charges made. Please go to www.mandg.co.uk/literature to view the Costs and charges illustration which contains information on the costs and charges applicable to your chosen fund and share class.

Please note that not all of the share classes listed above might be available in your country. Please see the Important Information for Investors document and the relevant fund's Prospectus for more information on the risks associated with this fund and which share classes are available for which product and which investor type.

ESG Standard Glossary

Additional ESG specifications: In the context of M&G, these are funds managed with an explicit ESG objective, outcome or in accordance with specific ESG criteria, and will have a number of minimum exclusions in place.

Engagement: Interaction with company management on various financial and non-financial, including ESG, issues. Engagement allows investors to better understand how a company is undertaking its operations and how it is interacting with its stakeholders, as well as advising on and influencing company behaviour and disclosures where appropriate.

ESG integration: Describes the explicit and systematic inclusion of Environmental, Social and Governance factors in investment analysis and investment decisions. It underpins a responsible investment approach, and allows investors to better manage risk and generate sustainable, long-term returns.

Exclusions: The exclusion or restriction of investments based on the sector in which they operate, the products or services they provide or for other specific criteria, i.e. they are deemed to be in breach of the United Nations Global Compact principles on human rights, labour the environment and anti-corruption.

Voting: As the partial owners of a company, shareholders have the right to vote on resolutions put forward at a company's annual general meeting. These resolutions include the re-election of directors, executive remuneration and business strategy, among others, and may include resolutions put forward by shareholders.

Explanation of our climate metrics

The Weighted Average Carbon Intensity (WACI) is the metric used to report our funds' carbon emissions. It is a measure of how much CO2 is being emitted per US\$ million of sales by each company that the fund invests in. This can be used to determine the likely effect a company is having on the environment. It can also help to compare the impact different companies have on the environment, and to compare companies against the broad market or the financial benchmark for the fund. However, this metric does not take into account the difference in carbon characteristics among sectors.

The WACI metric is one of many greenhouse gas emissions data points, each offering a different aspect of analysis on climate impact. M&G have selected this metric as it is applicable to multi-asset, equity and fixed income funds and it is aligned to the recommendations from the Taskforce for Climate Related Financial Disclosures (TCFD). The WACI metric does not include carbon intensity data attributable to government bond securities. It has also been chosen to align with M&G's groupwide target of transparency when it comes to the disclosure of climate emissions. At M&G we currently use MSCI as our main third-party data provider for carbon intensity data as we consider its coverage to be the broadest of the current providers. As with any mass data collection, there are methodology limitations; this also applies to MSCI. We make every effort to check its data and are currently building our own tools which will use a variety of data sources to gather and map the carbon emissions of our funds.

For the avoidance of doubt, this fund is not managed to a carbon emission objective and, the benchmark WACI (should funds have a benchmark) have been included for information purposes only.

Important information

With effect from November 2023, we are reporting using our internal accounting book of record (ABOR) moving away from the investment book of record (IBOR) used for reporting up to October 2023.

Carbon Intensity allows comparison of emissions across companies of different sizes and in different industries. At a company level, MSCI ESG Research calculates Carbon Intensity as carbon emissions per dollar of sales. The portfolio-level Weighted Average Carbon Intensity is the sum product of the constituent weights and intensities.

The M&G Sustainable Multi Asset Fund is a sub-fund of M&G Investment Funds (4).

The Morningstar Overall Rating based on the fund's Sterling Class I shares. Copyright © 2024 Morningstar UK Limited. All Rights Reserved. Ratings should not be taken as recommendation.

The value of investments will fluctuate, which will cause fund prices to fall as well as rise and investors may not get back the original amount invested. **For financial advisers only. Not for onward distribution. No other persons should rely on any information contained within.**
