

Premier Miton Corporate Bond Monthly Income Fund

Sterling class B - Income shares

Objective

The fund aims to provide an income, paid each month. The minimum recommended term for holding shares in this fund is at least 5 years. This does not mean that the fund will achieve the objective over this, or any other, specific time period and there is a risk of loss to the original capital invested.

Fund facts

Fund size	£302.3m
Distribution yield	5.11%
Modified duration	5.02
Duration times spread	8.09
Launch dates	Fund - 06 Nov 1995 Share class - 06 Nov 1995
Fund structure	OEIC
Reporting dates	Final - 30 Apr Interim - 31 Oct
Base currency	GBP
Valuation point	12:00 noon

Minimums

Initial £1,000	Top-up £500	Withdrawal £500	Holding £500
-------------------	----------------	--------------------	-----------------

Investment overview

- Monthly income paid through interest distributions.
- A minimum of 80% of the portfolio will be invested in sterling denominated investment grade rated corporate bonds (or hedged back to sterling, hedging is designed to offset movements in currencies).
- May invest in non-investment grade (lower quality) bonds, convertible bonds (bonds that can convert into company shares), Contingent Convertible Bonds and other investments that have similar characteristics to bonds.
- Exposure to a broad range of sectors such as financial and utility companies.

Awards and ratings

Awards and ratings are based on past events and are not an indication of future performance. Ratings are not a recommendation. Please see page 4 for further information.

Performance over 5 years (%)

— Manager start date: 10 Aug 2020

Credit rating (%)

Credit quality (%)

Top 10 sector weights (%)

Income

Distribution yield 5.11%

The distribution yield reflects the expected income distribution over the next twelve months as a percentage of the fund price as at the date shown. The distribution yield is higher than the underlying yield because some of the expenses are charged to capital. It does not include any preliminary charge and investors may be subject to tax on their distributions.

Underlying yield 4.71%

The underlying yield reflects the annualised income generated for distribution after deducting all expenses and is lower than the distribution yield because some of the expenses are charged to capital. The yield is expressed as a percentage of the fund price as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions.

The distribution yield and underlying yield are not guaranteed and will fluctuate.

Charges

Ongoing charges figure (OCF) 0.45%
as at 30.04.2023

The OCF is based on the last year's expenses and may vary from year to year. It excludes the costs of buying or selling assets for the fund (unless these assets are shares of another fund). The OCF includes the annual management charge. Transaction charges will also apply. Please refer to the [total costs & charges document](#) on our website for more information.

Initial charge 0.00%

Payment frequency Monthly

Payment dates 28th of each month

Ex dividend dates 1st of each month

Income distribution (pence per share)

Total income distributions in each of the fund's last 5 financial years.

The dividend amount that is paid each year can go down and up and is not guaranteed

Charges are taken from capital

As the objective of the fund is to treat the generation of income as either an equal or higher priority than capital growth, the fund's charges will be taken from capital instead of income. This may result in higher levels of income payments but could result in capital erosion or constrain capital growth.

Performance comparator

The fund is classified in the IA Sterling Corporate Bond sector, which we believe is

a meaningful comparator to help investors assess the performance of the fund.

General risks

Reference to any stock or fund is not a recommendation for investment purposes. All types of investment carry a degree of risk. It is possible you could lose some, or all, of the money you invest. The level of risk varies depending on the type of investment. Typically, you are less likely to lose money over the long term from an investment that is considered low risk, although potential returns may also be lower. Investments considered higher risk typically offer greater opportunities for better long-term returns,

though the risk of losing money is also likely to be higher.

When you invest, it is important that you understand the risk to your money and are comfortable with that level of risk. If you are unsure, we would recommend that you consult a financial adviser.

The value of your investment might not keep up with any rise in the cost of living.

You could lose money if financial markets fall.

There is no guarantee that the investment objective of the fund will be achieved.

The levels of taxation that apply to income or capital gains from the fund, including any tax relief that may be available, will depend on your personal tax situation.

Funds with similar objectives may not perform in the same way as they are likely to have different holdings.

Fund performance will be affected by investment decisions made by the fund manager.

Specific

Some of the main specific risks of investing in this fund are summarised here. Further detail is available in the prospectus for the fund.

Collective investment schemes (funds)

Where other funds are held in a portfolio, or where there is indirect exposure to other funds, these could include higher-risk investments like hedge funds, property funds or commodity funds (e.g. investing in gold, oil), which would increase the overall risk in the fund.

Counterparty credit

Some securities or financial instruments rely on payments or guarantees from a counterparty. This is a role usually undertaken by a bank or similar entity.

Currency

Where investments in a fund are denominated in currencies other than sterling (for example, if a fund holds assets priced in euros), its value will be affected by changes in the relevant exchange rate. Certain other investments, such as the shares in companies with profits from other countries, will also be effected.

Derivative

A contract whose value is based on the change in price of a specific asset or index. When derivatives are used within a fund, it doesn't necessarily increase risk. However, price changes in the underlying asset can translate into big swings in the value of derivatives (up and down), which has a direct effect on the value of the fund.

Fixed interest securities

Government and corporate bonds generally offer a fixed level of interest to investors, so their value can be affected by changes in interest rates. When central bank interest rates fall, investors may be prepared to pay more for bonds and bond prices tend to rise. If interest rates rise, bonds may be less valuable to investors and their prices can fall.

Futures (contracts)

A type of derivative. They allow investors to buy or sell an index, or other asset, today to be settled at a date in the future. These can make a fund more volatile from time to time.

Geographic concentration

Funds that have a strong focus on a particular country or region can carry a higher risk than funds with a more diversified portfolio.

Hedging

A hedge is designed to offset the risk of another investment falling in price. It can also act as a limit on potential gains if the investment that has been hedged increases in value.

Inflation

Higher inflation can lead to some investments falling in value, particularly those with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Issuer credit

There are times when the issuer of a security (for example, a company that has issued a bond) is unable to make income payments or repay its debt. When this happens it can result in losses for the fund.

Legal and tax

The income or capital gains from investments can sometimes be affected by changes in

legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in a fund may be difficult to sell and buy at the desired price. The fund value could fall as a result.

Non-investment grade bonds

Bonds with a higher risk that the bond issuer might not meet its income or repayment obligations, as assessed by independent bond rating companies.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the fund holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Over The Counter derivatives (OTC)

These are types of derivatives that are not traded on a public exchange. Agreed privately between two parties, OTC derivatives can be tailored to meet the exact needs of each party. They can make a fund more volatile from time to time.

Property and Real Estate Investment Trusts

Property values can rise and fall sharply depending on the strength of a country's economy.

Securities with loss-absorbing features

These instruments may be subject to regulatory intervention and / or specific trigger events relative to regulatory capital levels falling to a pre-specified point. This may result in their conversion to company shares, or a partial or total loss of value.

Ratings, awards and other information

See <https://www.premiermiton.com/indices/> for a full copy of the disclaimer.

A swing pricing is where the price can swing to either a bid or an offer basis depending on the investment and redemption activity in the fund. This means the investor selling or buying fund shares bears the associated [dis] investment costs and protects the continuing holders in the fund. Performance could be shown on a combination of bid, mid or offer prices, depending on the period of reporting.

MSCI ESG Research LLC's ("MSCI ESG") Fund Metrics and Ratings (the "Information") provide environmental, social and governance data with respect to underlying securities within more than 31,000 multi-asset class Mutual Funds and ETFs globally. Glossary

Accumulation shares

A fund may have accumulation and income shares. If an investor selects this share type, any income generated by the fund is automatically reinvested. The amount of the reinvested income is reflected in the increased price of each accumulation share.

ACD

Authorised Corporate Directors (ACDs) are responsible for the running of an investment fund. They have a duty to act in the best interests of the fund's investors, and ensure that the fund is well managed in line with regulations and with the investment objectives and policies set out in its prospectus.

Annual management charge (AMC)

The yearly fee paid to Premier Miton for managing a fund, expressed as a percentage of your investment. The AMC does not typically change from year to year.

Assets

Different groups of investments such as company shares, bonds, commodities or property.

Bonds (or fixed income)

Types of investments that allow investors to loan money to governments and companies, usually in return for a regular fixed level of interest until the bond's maturity date, plus the return of the original value of the bond at the maturity date. The price of bonds will vary and the investment terms of bonds will also vary.

Capital

Describes financial assets, particularly cash, or other assets, such as shares, owned by a person or organisation.

Contingent convertible bonds (CoCos)

A form of debt security usually issued by a financial institution that can either convert into equity or have the principal value written down, resulting from certain events relating to regulatory requirements.

Convertible bonds

A type of bond that the holder can convert into shares of the issuing company in certain circumstances.

Credit rating

A rating or score awarded by an independent agency, to indicate the financial strength of the issuer of a bond, and the potential for a default on payments. Bonds issued and backed by developed market governments are generally considered to have the highest rating. As the financial strength or quality of the issuing entity diminishes, so does the credit rating. Higher quality bonds are considered investment grade. Lower rated bonds may be considered to be 'sub-investment grade' or 'high yield'. Not all bonds are rated and these are 'non rated bonds' which may vary in quality.

Duration

A measure of the price sensitivity of a fixed income investment to a change in interest rates.

Duration times spread (DTS)

A measure of the price sensitivity of a bond to duration and credit spread risks. Duration is a measure of the price sensitivity to a change in interest rates and credit spread is the additional yield of a bond over the equivalent government bond. DTS is calculated by multiplying the duration by the credit spread. The weighted average for the fund can then be calculated.

Hedge

An investment which aims to mitigate the effect of adverse price movements in an asset or group of assets.

High yield bonds

Bonds that are expected to have a higher risk of defaulting on interest payments or repayment of the issue value on maturity and receive lower ratings from credit rating agencies.

Investment Association (IA)

The trade association that represents investment management firms in the UK.

IA sectors

To help with comparisons between the thousands of funds available, funds are categorised into different groups or sectors,

organised and reviewed by the Investment Association (IA).

IA Sterling Corporate Bond sector

Funds which invest at least 80% of their assets in Sterling denominated (or hedged back to Sterling) BBB minus or above corporate bond securities (as measured by Standard & Poors or an equivalent external rating agency). This excludes convertibles, preference shares and permanent interest bearing shares (PIBs).

Individual Savings Account (ISA)

A type of tax-free scheme, set up by the government, designed to help people make the most of their savings and investments. All income and gains from an ISA investment are exempt from UK Income Tax and Capital Gains Tax. HM Revenue and Customs sets the maximum amounts that you are allowed to invest into an ISA each tax year.

Ongoing Charges Figure (OCF)

A measure of what it costs to invest in a fund over a year. It includes the fee paid to Premier Miton for the management of the fund (known as the annual management charge), with the remainder covering costs that have to be paid to external companies for other services relating to the ongoing administration and management of a fund, such as the fees paid to the depositary, custodian, regulator, auditor and administrator. The fee is deducted from the value of the fund and reflected in the fund's share price. The OCF is typically calculated once a year and can change from year to year.

Total return

A way of showing how an investment has performed, and is made-up of the capital appreciation or depreciation and includes any income generated by the investment. Measured over a set period, it is expressed as a percentage of the value of the investment at the start of that period.
