

HSBC OpenFunds

Global Sustainable Multi-Asset Balanced Portfolio

Monthly report 29 February 2024 | Share class Acc C

Investment objective

The Fund aims to provide growth in line with its risk profile in the long term, which is a period of five years or more. The Fund's risk profile is rated as 3 where 1 is a lower level of risk and 5 is a higher level of risk. The Fund invests in a range of sustainable investment strategies which aim to consider financial returns alongside environmental, social and governance factors. Please see the Prospectus for an explanation of the HSBC risk levels and sustainable investment strategies.

Investment strategy

This is one of a range of actively managed Global Sustainable Multi-Asset Portfolios offered at different risk levels. The asset allocation of each fund in the range reflects the risk level. The Fund is managed with the aim of maximising returns in line with its agreed long term risk profile therefore any potential returns are likely to be limited by the risk profile of the Fund. The exposure to each asset class may be achieved by investing in collective investment schemes, investing directly in asset classes and investing in derivatives. The focus on sustainable investment strategies is taken into consideration when deciding which asset classes the Fund will invest in and how the Fund achieves exposure to those asset classes. The Fund is not managed with reference to a benchmark.

Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless. The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.

Share class details

Key metrics

NAV per share	GBP 1.33
Performance 1 month	1.27%

HSBC OpenFunds offer a choice of five different risk levels, to be selected by investors depending on factors like their financial goals, time horizon and capacity for loss. Typically, the more risk investors take, the more return they would expect to see. At HSBC Asset Management, we measure risk by volatility – how sharply a Portfolio’s share price moves in any given time period (up or down). The higher the volatility, the higher the risk. The table above shows the Portfolio’s return (for the primary share class or hedged currency share class) per year over the last three years (known as annualised) and the level of volatility over the same period. This can be compared against other funds in the peer group, as defined by an independent research company*. An example of a good outcome would be that the HSBC Portfolio return is higher than the peer group’s average return and the volatility (risk taken) is lower. However investors should consider their own priorities when it comes to returns and the risk taken to achieve them.

*Morningstar Categories are used to define the peer group comprising funds they deem similar based on fund objectives and holdings. The average is a median.

Monthly performance commentary

Market Commentary

Global equities were up in February, driven by strong earnings reports and a rebound in Chinese equities. Fixed income markets fell over the month, with yields rising, following strong labour market and inflation data.

Across equities, emerging markets outperformed developed markets. This was driven by strong returns from China, following a number of supportive steps taken by the CCP to maintain market stability and another cut to mortgage policy rates. Other Asian markets associated with the Technology sector such as Taiwan and South Korea also rallied. Within developed markets, the US outperformed, driven by strong earnings reports from some of the “Magnificent 7” companies. The UK and Europe-ex UK equities underperformed the broader developed markets. In Japan, Yen weakness benefitted equity returns given the export-driven nature of the stock market. Within fixed income, US Treasuries prices fell over the month as inflation numbers came in stronger than anticipated while job numbers were also robust. This led to an increase in yields, as investors re-assessed the pace and timing of rate cuts. In the UK, Gilts sold off on continuing wage growth pressures despite data showing the economy fell into a technical recession during the second half of 2023. The US dollar gained modestly over the period, boosted by the higher yields and the broadly resilient economic data. The Euro and the Sterling fell against the US dollar given the relative strength of the US economy in comparison. In the commodity markets, Brent Oil pushed higher, on elevated geopolitical risk. Gold ended the month lower, facing downward pressure from hawkish economic data and the pushback on timing of policy rate cuts.

Portfolio performance

Equities rallied in February, while government bonds fell modestly. This resulted in positive returns in higher risk profiles and negative returns in the lower risk profiles. The Global Sustainable Multi-Asset portfolios are actively positioned against a long-term strategic asset allocation. During February, our active positioning detracted. The biggest negative contribution came from our tilt away from equity as well as our preference for government bonds. Conversely, our tilt away from Property and European equity added value.

Investment Team Views and Portfolio Positioning - There are three key themes that we are positioned to capture within the Global Sustainable Multi Asset portfolios:

Recession concerns easing - The likelihood of a recession in the West has fallen, with the US economy looking particularly strong, providing support for equity markets. However, economic growth is still slowing, and as such we remain selective in our equity holdings. During February we increased our equity allocation, with a focus on global equities. We also reduced our emerging market and European equity allocations. We are tilted away from Property, as we believe the full impact of higher borrowing costs has yet to be priced in, and global high yield which still looks vulnerable.

The rate cuts are coming - In our view, the major central banks are likely to start cutting interest rates in the second half of 2024 as inflation continues to ease and economic growth slows. This encourages us back into government bonds, which are (for the first time in almost a decade) delivering an appealing stream of income for investors. We are holding increased exposure to the Norwegian Krona versus Euro as inflation in Norway remains elevated, and we expect to continue receiving high interest payments as their central bank delays cutting interest rates.

Outperformance in Eastern markets - The economic backdrop in markets such as Japan is very strong, monetary policy settings are accommodative and there is room for fiscal support. Portfolios are tilted towards Japan versus developed market equity given attractive valuations, strong flows from foreign investors, improved corporate governance, and a weakening Yen supporting exports.

Market Outlook

The likelihood of Western economies avoiding a recession this year is increasing although markets remain ‘priced for perfection’, and disappointment remains a key risk. We are cognisant that geopolitical uncertainty, upcoming elections and fiscal constraints might impact markets later in the year. Economic performance remains divergent in emerging economies. India will be the fastest growing economy in 2024, while the China outlook remains challenged by several growth headwinds. Given the strength of the global economy, and particularly the US, we see the first interest rate cut from the Fed in mid-2024, with policy easing continuing in H2. The ECB and Bank of England are likely to follow the Fed. Fiscal policy looks set to be a slight drag on growth in 2024 in western economies. But we do not expect a return to 2010s-style austerity. We anticipate that Emerging market central banks will continue leading the global easing cycle, with interest rate cuts in LatAm and Emerging Europe. Asia central banks are likely to ease policy during H2 2024. Policy support in China remains measured and targeted. In light of the above, we have moved portfolios to a more neutral risk stance. We remain selective within our equity holdings we hold a bias towards companies with earnings resilience, favouring quality. In fixed income, we believe ‘bonds are back’, with yields at attractive levels and further room to fall as disinflation continues. We hold gold given its safe haven properties and as an inflation hedge. Our portfolios are tilted towards Eastern and Emerging markets, including Japan and India.

Carbon intensity emissions (%)

Over the month, the average carbon intensity of the market benchmark was measured at 207.6 tCO₂e. Our investment approach resulted in a reduction of 24%, meaning the carbon intensity of the portfolio was measured at 158.4 tCO₂e.

ESG score distribution (%)

81% of the underlying issuers held by the fund are rated AAA-A, compared to 69% of those in the reference benchmark. The average ESG score for the underlying issuers held by the fund is 7.25, while that of the reference benchmark securities was 6.4.

Fund vs reference comparator (%)

Fund	Weight	ESG score	Carbon intensity emissions	Index	Weight	ESG score	Carbon intensity emissions
Developed Equity	48.82%	4.03	22.93	MSCI World	48.82%	3.47	49.15

GEM Debt - Hard Currency	2.73%	0.12	15.60	JPM EMBI Global Diversified	2.73%	0.10	21.83
Global High Yield	1.16%	0.07	1.69	BoAML Global High Yield BB-B	1.21%	0.06	3.33

To demonstrate the performance of the fund against its sustainable investment aim the ESG and carbon intensity scores of the fund are shown compared to the scores of a reference comparator. The reference comparator represents the ESG and carbon intensity scores the fund might have achieved if it did not have a sustainable investment aim.

The reference comparator is a combination of market indices that represent the asset classes held by the fund and in the same proportions (weighting) as the fund, as shown in the table above. The composition of the reference comparator varies over time in line with the asset classes and proportions held by the fund.

The table above shows that the various asset classes contribute differently to the ESG and carbon intensity scores although it is important to consider the weighted average scores of the overall fund and those of the reference comparator.

Stewardship

Stewardship in Action – Proactive engagement with a Singaporean financial services group

A large financial services player in Singapore, with growing businesses in South China and SEA region in which HSBC AM has substantial credit and equity positions. Purposeful engagement began in February 2022.

In a highly unusual situation, their female CEO was not on the Group board, despite already being CEO for over a year. Investors are questioning who really controls the running of the business, which can negatively impact the performance of the stock.

Desired Action - Social & Governance - Place the CEO on the board in the next 18 months or sooner.

We met with their representatives of investor relations to understand the issue and raise our concerns. We voted accordingly to express our dissatisfaction with current arrangements and wrote to company to formally express our expectations on the CEO joining board. We hosted their CFO and CEO in the HSBC London office to understand their perspective of CEO not being voting member of the board and expressed our support to change. Company responded to our letter giving reassurance that the CEO would join the board in the medium term. The company gave us reassurances that the CEO would join the board in the next 18 months. They argued that giving the new CEO time away from the formal board role was appropriate to allow the individual to settle. In February 2023, the CEO joined the board with a three-year term. At the AGM in April 2023, we voted to support her joining. We will meet with the company to support their ongoing work on efficient capital allocation and improvement on climate change planning, which are other objectives of our engagement.

Risk disclosures

- Investing in other funds involves certain risks an investor would not face if investing in markets directly. Governance of underlying assets can be the responsibility of third-party managers.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Liquidity is a measure of how easily the Fund's holdings can be quickly converted to cash. The value of the Fund's holdings may be significantly impacted by liquidity risk during adverse market conditions.
