

ASI American Unconstrained Equity Fund

(From 7 August 2019 The fund name was amended from American Equity Unconstrained Fund to ASI American Unconstrained Equity Fund)

Platform 1 Accumulation GBP

31 May 2020

Objective

To generate growth over the long term (5 years or more) by investing in US equities (company shares).

Performance Target: To achieve the return of the S&P 500 Index plus 3% per annum over rolling three years periods (before charges). The Performance Target is the level of performance that the management team hopes to achieve for the fund. There is however no certainty or promise that they will achieve the Performance Target.

Performance Comparator: Investment Association North America Equity Sector Average. The ACD believes this is an appropriate target/comparator for the fund based on the investment policy of the fund and the constituents of the index/sector.

Portfolio securities

- The fund will invest at least 70% in equities and equity related securities of companies listed, incorporated or domiciled in the US or companies that derive a significant proportion of their revenues or profits from US operations or have a significant proportion of their assets there.
- The fund may also invest in companies listed, incorporated, or domiciled in Canada or Latin America.
- The fund may also invest in other funds (including those managed by Aberdeen Standard Investments) and money-market instruments, and cash.

Performance Data: Share Class Platform 1 Acc GBP. Source: Aberdeen Standard Investments (Fund & Benchmark) and Morningstar (Sector). Basis: Total Return, NAV to NAV, UK Net/Gross Income Reinvested. "Fund (Net)" refers to the actual unit price performance of the shareclass shown; "Fund(Gross)" adds back charges such as the annual management charge to present performance on the same basis as the performance target / performance comparator / portfolio constraining benchmark.

These figures do not include the initial charge; if this is paid it will reduce performance from that shown.

Past performance is not a guide to future returns and future returns are not guaranteed.

Risk and reward profile

This indicator reflects the volatility of the fund's share price over the last five years. See Key Investor Information Document (KIID) for details.

Key risks

- The value of investments and the income from them can fall and investors may get back less than the amount invested.
- A concentrated portfolio may be more volatile and less liquid than a more broadly diversified one. The funds investments are concentrated in a particular country or sector.
- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

Management process

- The management team use their discretion (active management) to maintain a concentrated asset mix at sector and stock level.
- Their primary focus is on stock selection using research techniques to select individual holdings. The research process is focused on identifying companies where the management team have a different view of a company's prospects than that of the market, and which align with their views regarding future economic and business conditions.
- In seeking to achieve the Performance Target, the S&P 500 Index is used as a reference point for portfolio construction and as a basis for setting risk constraints. The expected variation ('tracking error') between the returns of the fund and the index is not ordinarily expected to exceed 10%. Due to the active nature of the management process, the Funds performance profile may deviate significantly from that of the S&P 500 Index.

Derivative usage

- The fund may use derivatives to reduce risk, reduce cost and/or generate additional income or growth consistent with the risk profile of the fund (often referred to as Efficient Portfolio Management).
- Derivative usage in the fund is expected to be very limited. Where derivatives are used, this would mainly be in response to significant inflows into the fund so that in these instances, cash can be invested while maintaining the funds existing allocations to company shares.
