Key risks

- The value of investments and the income from them can fall and investors may get back less than the amount invested
- Tracking Error Risk - The fund may not perform fully in-line with the index which it is tracking because of factors which may include transaction costs, timing and holding mismatching, or in the event of extreme market disruption.
- Currency Hedged Indices Risk - Due to timing differences, currency hedging applied to the fund may differ to that of the index. This may mean that the fund's performance deviates from that of the index.

Management process

- The fund uses passive management techniques (including indexation and sampling) to achieve the fund's objective. The management team use their discretion (specifically when using sampling techniques) in deciding which investments are to be included in the portfolio. The number of investments may vary.
- They anticipate that deviation from the performance of the Bloomberg World Government Inflation-Linked 1-10 years Index (Hedged to GBP) ("tracking error") will be in the region of 0.0-0.5% per year. Factors likely to affect the ability of the fund to achieve this tracking error are transaction costs, small illiquid components, coupon reinvestment, fund expenses such as annual management charges, significant inflows / outflows and the cash management.
- The tracking error may be affected if the times at which the fund and the Bloomberg World Government Inflation-Linked 1-10 years Index (Hedged to GBP) are priced are different. The fund is valued at 12:00, but the Bloomberg World Government Inflation-Linked 1-10 years Index (Hedged to GBP) is valued at market close and so therefore the tracking error of the fund at Valuation Point may appear to be higher than if the fund and the Bloomberg World Government Inflation-Linked 1-10 years Index (Hedged to GBP) were priced at the same time.
- Non-Sterling denominated assets will typically be hedged back to Sterling to reduce exposure to currency rate movements.
