

HSBC Global Investment Funds

ECONOMIC SCALE US EQUITY

Monthly report 31 March 2024 | Share class BDGBP

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of United States of America (USA) shares.

Investment strategy

The Fund is actively managed and is not constrained by a benchmark. In normal market conditions, the Fund will invest at least 90% of its assets in shares (or securities similar to shares) of companies of any size that are based in, or carry out the larger part of their business activities in, the USA. The Fund's investment process identifies and invests in companies according to their economic scale, measured by their contribution to Gross National Product. This is also referred to as Value Added - the difference between a company's outputs and inputs. The Fund may invest up to 10% in Real Estate Investment Trusts, and may also invest up to 10% of its assets in other funds, including HSBC funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- Investing in assets denominated in a currency other than that of the investor's own currency exposes the value of the investment to exchange rate fluctuations
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.

Share class details

Key metrics

Risk disclosures

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
