

Fund Overview

The fund aims to deliver an annualised net return of 7% to 8% over the medium to long-term in anything but the bleakest of market conditions. It will do so via an actively managed exposure to a diversified portfolio of defined return investments linked to global equity indices. It invests primarily in UK Government Bonds to provide the return of capital to investors over time, alongside a portfolio of global, liquid derivatives that generate the return on capital. Due to the nature of the investments, the fund's behaviour in different market scenarios should be more predictable and the returns more probable.

Monthly commentary

Inflation data across the world and subsequent action by central banks continue to be the main drivers of equity market performance. Sticky inflation data in October did not help markets as investors priced in the presumption of higher interest rates being around for even longer. In October, the US tech sector, another powerhouse in equity index performance, reported its earnings which, on the whole, were worse than expected. The US large cap market was down 2.1% for the month, while the UK and EU large cap markets were down 3.7% and 2.5% respectively. The fund was down just 0.7% for the month. Despite the downward trajectory of the three markets the fund is most exposed to (US, EU, UK) over the last three months, the fund's sensitivity to movements in these is still relatively low. There is still sizeable downside protection in the fund. Markets can fall 29% from here before the average investment in the fund would not pay out its desired return. Over the last 11 months, two-thirds of the fund has matured. This is excellent timing as the terms we can achieve on the new trades are significantly more attractive in the higher interest rate world we are in than those that matured, with annual coupons of 9.24% vs 7.8% and final autocall barriers of 65.5% vs 69.5%.

Forward Looking Scenario Analysis & Intrinsic Value

The scenarios presented are an estimate of future performance based on current derivative market conditions and are not an exact or reliable indicator. What you get will vary depending on how the market performs and how long you keep the investment.

Although the Fund has a medium to long-term objective to deliver an annualised return of 7%-8% over the long term, the scenario analysis is calculated over shorter term periods for greater accuracy.

| Scenario Analysis | Market Move | -30% | -20% | -10% | 0% | 10% | 20% | 30% |
|-------------------|------------------------------|---------|---------|--------|--------|--------|--------|--------|
| | 3 months | -22.67% | -11.60% | -3.58% | 2.25% | 5.90% | 7.37% | 7.98% |
| | 1 year | -20.30% | -7.23% | 0.92% | 7.02% | 10.94% | 12.52% | 13.17% |
| | 2 years | -16.83% | -2.16% | 7.19% | 14.17% | 18.02% | 19.39% | 19.93% |
| | 3 years | -12.96% | 3.66% | 14.66% | 22.21% | 25.45% | 26.40% | 26.77% |
| Intrinsic value | Intrinsic NAV Change | 8.50% | 36.02% | 30.48% | 18.77% | 8.61% | 8.11% | 7.98% |
| | Duration | 4.71 | 4.69 | 3.82 | 2.08 | 0.72 | 0.64 | 0.63 |

Source: Atlantic House as at 31/10/2023

The Fund's actual returns may differ from the estimates shown above and are subject to daily price movement. Future performance may also be subject to taxation, that could change in the future. The value of investments can go down as well as up and you may not get back the full amount invested.

Estimated Fund Move or 'Intrinsic Value'

The intrinsic value is the aggregate terminal value of the Fund considering estimated fees over the relevant period. The table above shows that, for example, if an investor bought the Fund today and none of the markets on which the investments were based moved between now and when the investments mature, the Fund would increase by 18.77%, a terminal value of GBP 2.2205 (based on current NAV of GBP 1.8696). What this does not tell us is the yield that is represented by these intrinsic values.

Average Time to Holdings' Maturity or Duration

The table above also shows the weighted average time to maturity of the investments held within the Fund. Currently this is 2.08 years because, at current market levels, most of the current investments are likely to mature within 1 to 2 years. This number gives the investor an idea of how long it will take for them to earn the Equivalent Annualised Return.

Equivalent Annualised Return or Intrinsic Value (Annualised)

The table also shows the current expected return of the Fund considering estimated fees for certain movements in the underlying indices. For example, if markets do not move, we would expect the Fund to yield 8.61% given its current make-up. You can also see that we would expect a positive return if the market falls 20% and then stays at that level until all investments mature.

Key Risks

This is a marketing communication. The Fund is aimed at advised & discretionary market investors over the long term who have the capacity to tolerate a loss of the entire capital invested or the initial amount.

A final investment decision should not be contemplated until the risks are fully considered. A comprehensive list of risk factors is detailed in the Risk Warnings Section of the Prospectus and the Supplement of the Fund and in the relevant key investor information document (KIID). A copy of the English version of the Supplement, the Prospectus, and any other offering document and the KIID can be viewed at www.atlantichousegroup.com and www.geminicapital.ie. A summary of investor rights associated with an investment in the Fund is available in English at www.geminicapital.ie.

Calculations do not consider credit spread movements of the issuers of the securities. The Mark to Market of the securities and therefore the NAV of the Fund will decrease as credit spreads widen and vice versa if spreads narrow. The value of investments and income from them can go down and you may get back less than originally invested. There is no guarantee that the Fund will achieve its objective. The level and basis of tax is subject to change and will depend on individual circumstances. The Fund invests in derivatives for investment purposes, for efficient portfolio management and/ or to protect against exchange risks. Derivatives are highly sensitive to changes in the value of the asset from which their value is derived. A small movement in the value of the underlying asset can cause a large movement in the value of the derivative. This can increase the sizes of losses and gains, causing the value of a derivative investment to fluctuate and the Fund could lose more than the amount invested.

The Fund invests in high quality government and corporate bonds. All bonds will be rated at least A- by Standard and Poors at outset. If any of the bonds the Fund owns suffer credit events the performance of the Fund could be adversely affected. Other risks the Fund is exposed to include but are not limited to, credit and counterparty risk, possible changes in exchange rates, interest rates and inflation, changing expectations of future market volatility, changing expectations of equity market correlation and changing dividend expectations.

A decision may be taken at any time to terminate the arrangements for the marketing of the Fund in any jurisdiction in which it is currently being marketed. Shareholders in affected EEA Member State will be notified of any decision marketing arrangements in advance and will be provided the opportunity to redeem their shareholding in the Company free of any charges or deductions for at least 30 working days from the date of such notification.

Important Information
