Fees & charges (%)

Annual management charge (AMC)	0.63
Estimated ongoing charge (OCF)	0.76

All ongoing charges stated are as per latest published report and accounts.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note the performance target is to be achieved over a specific annualised time period. Refer to the performance target wording within the objective. From 1 July 2020, the benchmark changed from 50% FTSE All Share/50% ICE Bank of America ML 5-15 Year Sterling Non Gilt Index to 50% FTSE All Share/50% ICE Bank of America Sterling Non Gilt Index. Past performance before 1 July 2020 is shown for the previous benchmark. Fund size at 12pm on last business day of month. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

The 50% FTSE All Share + 50% ICE Bank of America Sterling Non Gilt Index is a composite index reflecting 50% exposure to shares listed on the London Stock Exchange and 50% exposure to corporate bonds. It forms the basis of the Fund's performance target and provides a useful comparison against which the Fund's performance can be assessed over time.

The Investment Association (IA) groups funds with similar geographic and/or investment remit into sectors. The Fund's ranking within the sector (as calculated by a number of data providers) can be a useful performance comparison against other funds with similar aims.

Investment policy

The Fund invests in shares (also known as equities) and bonds of governments, companies or any other type of issuer, in any country. At all times the investment in equities will be limited to a maximum of 60% of the value of the Fund's portfolio and the Fund will normally have a strong bias towards UK companies and bonds. Companies and bond issuers may be of any size, in any industry. The Fund may also invest in other assets including cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) to reduce risk or to manage the Fund more efficiently. The Fund is actively managed with reference to the 50% FTSE All Share + 50% ICE Bank of America Sterling Non Gilt Index, which is broadly representative of the securities in which it may invest, as this forms the basis of the Fund's performance target. The Investment Manager has a high degree of freedom to choose individual investments for the Fund. As an additional means of assessing the performance of the Fund, the IA Mixed Investment 20-60% Shares sector average, which is based on a peer group of broadly similar funds, may also provide a useful comparator. Investors should note that many funds in the sector peer group have a more global focus than the Fund.

Investment strategy

The Investment Manager looks to balance the long-term growth and income potential of equities with the more stable returns offered by bonds and cash. The strategy has the flexibility to adjust to changing market conditions by altering the level of exposure to the different asset classes. In managing the equity portion of the portfolio, the Investment Manager will typically follow a value investment style, seeking companies it believes to be undervalued by the market that may be more resilient in periods of economic uncertainty.

Fund specific risks

In respect of the equities portfolio within the Fund, this follows a value investment style that creates a bias towards certain types of companies. This may result in the Fund significantly underperforming or outperforming the wider market. When the Fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the Fund due to differences in short-term interest rates between the currencies. The Fund could lose money if a counterparty with which the Fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital to the Fund. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified. The Fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Some or all of the ongoing charges may be taken from capital, which may erode capital or reduce potential for capital growth.

Source for fund ratings/awards

Overall Morningstar Rating™ is shown for Janus Henderson share classes achieving a rating of 4 or 5.

Glossary

Gilts

British government bonds sold by the Bank of England, done to finance the British national debt.

Historic Yield

The Historic Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.

Standard deviation

A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.
