

Quarterly factsheet

Architas BirthStar®2036—40 Target Date Fund

Investment Objective and Policy

The Fund seeks to achieve capital growth and, gradually over time, to reduce the risk of capital erosion for investors planning to withdraw all or substantial portions of their investment in the Fund during or after the Target Date Range (which is 2036—40).

The Fund is an actively managed fund of funds. The Fund invests at least 70% of its assets in other funds (underlying funds), including funds which are traded on stock exchanges (investment trusts and exchange traded funds), other closed-ended funds and funds managed by the ACD or its associates.

The underlying funds will invest globally (including in emerging markets) in a range of asset classes and financial instruments including shares, debt instruments (bonds) including those which can easily be converted into cash (money market instruments), freely transferable rights to buy other investments at a future date (warrants), financial contracts that derive their values from those of other investment instruments or indices (derivatives) and deposits. The underlying funds will wherever practicably possible be passive funds, meaning they seek to track investment indices.

The Fund may also invest directly in the above asset classes and financial instruments when there are specific benefits in doing so. Further, the Fund may also obtain indirect exposure to property through investment in Real Estate Investment Trusts (REITs) and shares in property investment companies, and may engage in stock-lending and borrowing.

When required to manage liquidity, or the Fund's risk, the Fund may hold its assets in cash or deposits and money market instruments. The Fund may use derivatives to help achieve the investment objective (investment purposes) as well as to reduce risk or to manage the Fund more efficiently (often referred to as "efficient portfolio management").

The Fund's investments will change over time, becoming increasingly conservative on the approach to the Target Date Range and thereafter, by increasing its investment in money market instruments, cash, and other lower risk assets.

Investment performance

Total Returns (%)	31/03/15-31/03/16	31/03/16-31/03/17	31/03/17-31/03/18	31/03/18-31/03/19	31/03/19-31/03/20
Architas BirthStar Target Date 2036-40	(3.4)	26.9	0.5	8.4	(6.8)

The Fund's inception date is 11 November 2014. The Fund performance figures take into account the annual management charge (0.55% OCF) but not the initial charges or policy charges that would be payable, which will have the effect of reducing the past performance figures shown. Figures are on a single pricing basis and assume income is reinvested. Past performance is not a guide to future performance.

The Annual Management Charge (AMC), is a charge taken from the fund. The charge is expressed as a percentage per annum but is normally taken daily from the fund and is calculated based on the value of the funds under management. Normally the fund manager reserves the right to review the level of charge. The Ongoing Charges Figure (OCF) is a charge paid over a year for as long as the investment is held. It is made up of the Annual Management Charge (AMC) and other operating costs.
