Fund Objective & Policy

The Fund aims to provide income with the prospect of some investment growth over the long term (5 years or more). The Fund is actively managed, and invests at least two-thirds of its assets in bonds denominated in sterling (GBP) or euro (EUR). In addition to GBP or EUR denominated bonds, the Fund may invest in bonds priced in other currencies, however all non-sterling bonds are usually hedged back to sterling. The Fund follows a strategic investment approach, allowing for changes to allocation between investment grade and below investment grade corporate bonds, as well as investment in government bonds and bonds issued by international organisations. This approach aims to position the Fund to take advantage of those areas of the bond market that are considered to offer the best return potential. The Fund is permitted to use derivatives for investment purposes. This includes allowing the Fund to profit from the fall in the price of an asset (shorting), as well as extending market exposure beyond the value of its assets (leverage). In addition, derivatives may be used with the aim of reducing risk or managing the Fund more efficiently. Derivatives are sophisticated investment instruments linked to the rise and fall of the price of other assets. The Fund may also invest in other assets such as cash and deposits, and hold other funds (including funds managed by Columbia Threadneedle companies) when deemed appropriate.

Risk & Reward Profile

UCITS SRRI

The Risk and Reward Indicator demonstrates where the Fund ranks in terms of its potential risk and reward. Please see the Key Investor Information Document for more information.

Key Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- The Fund may enter into financial transactions with selected counterparties. Any financial difficulties arising at these counterparties could significantly affect the availability and the value of Fund assets.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- The Fund holds assets which could prove difficult to sell. The Fund may have to lower the selling price, sell other investments or forego more appealing investment opportunities.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund's assets may sometimes be difficult to value objectively and the actual value may not be recognised until assets are sold.
- The Fund may invest materially in derivatives (complex instruments linked to the rise and fall of the value of other assets). A relatively small change in the value of the underlying investment may have a much larger positive or negative impact on the value of the derivative.
- Leverage occurs when economic exposure through derivatives is greater than the amount invested. Such exposure, and the use of short selling techniques, may lead to the Fund suffering losses in excess of the amount it initially invested.
- The fund may exhibit significant price volatility.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Typical Investor Profile

The Fund may be suitable for investors with an investment horizon of more than five years seeking income and the possibility of some capital growth who are prepared to tolerate moderate price fluctuations. If investors are uncertain if the Fund is suitable for them, they are advised to contact a financial adviser.

Share classes in the table may not be open to all investors, please refer to the Prospectus for further information. Overall impact of costs: Costs and expected returns may increase or decrease as a result of currency and exchange rate fluctuations, if costs are to be paid in another currency than your local currency. The ongoing charges figure (OCF), exit charges (maximum amount to be deducted shown in the table above) and transaction costs show the percentage that may be deducted from your expected returns. The OCF is usually based on the last year's expenses, includes charges such as the Fund's annual management charge and operating costs. Transaction costs displayed are based on a three year average total and are calculated based on FYE Report and Account figures. Where the fund is less than 3 years old the transaction costs are based on proxy and actual costs. All transaction costs are as at 07/03/24. Additional distributor or intermediary fees may not be included. In some cases, the OCF may be based on an estimate of future charges. For a more detailed breakdown please visit www.columbiathreadneedle.com/fees.
