

MI Charles Stanley

Multi Asset Adventurous Fund

Investment objective and policy

The Fund aims to deliver gross investment returns in excess of inflation (as measured by the UK Consumer Prices Index) plus 4% per annum, over a 5-year period.

The Fund will primarily invest in collective funds, transferable securities, other collective investment schemes, money market instruments, cash and deposits, and is also able to use derivatives for efficient portfolio management and investment purposes. Asset allocation exposure of the Fund will be actively managed and typical allocation will be as follows: 80-100% higher risk assets (including equities, commodities and property securities) and 0-20% lower risk assets (debt instruments e.g. bonds and cash).

Key facts

Launch Date	Fund Type	Denomination
03-Apr-17	UCITS OEIC	Sterling
Fund size	Domicile	ISA/SIPP Eligible
£ 10.14 M	UK	Yes

Most markets ended the month on a negative tone following the emergence of a new variant of Covid-19 – named Omicron – and hawkish narrative from the Federal Reserve.

Governments around the world scrambled to impose new travel curbs fearing the variant could resist vaccinations and upend a nascent economic reopening. The World Health Organisation said it was not yet clear whether Omicron, which was first detected in Southern Africa, is more transmissible than other variants, or if it causes more severe disease.

Inflation continues to be a significant worry in markets, with the level of price rises higher than central bank forecasts. The Federal Reserve and Bank of England argue that current price rises are being caused by the release of pent-up demand as economies re-open following the easing of pandemic restrictions. This demand boost has been accompanied by problems on the supply side because of continued lockdowns and global disruption to shipping and the location of shipping containers. Factories supplying essential components are also still ramping up production. These factors are expected to ease over the next year. However, inflation could become more structural if wage settlements started to rise significantly, which would be problematic for policymakers at central banks.

Some tightening of market condition is approaching as special measures are being removed. It is possible that UK interest rates will be raised from the historic low of 0.1% before Christmas, depending on the outlook for the Omicron variant. The Federal Reserve has also started to taper its \$120 billion in monthly asset purchases – so-called “quantitative easing”. Fed Chairman Jerome Powell has even said the timetable for the taper could be speeded up. However, in order not to spook markets, the removal of stimulus should be a gradual process of normalisation and there will be no “hard stop”.

Economic growth in 2021 will be substantial when compared with the height of the crisis in 2020, although growth is now starting to slow. Global GDP has, however, surpassed its pre-pandemic level and therefore completed the transition from recovery to expansion.

The United Nations COP26 climate conference in Glasgow concluded with a range of commitments that will result in a focus on “green growth” in major economies. Chinese President Xi Jinping and Joe Biden held talks and attempted to find common ground around environmental themes. However, the situation with Taiwan is likely to be a continual source of tension between the two powerful nations. There are also mounting disagreements between France and the UK over issues such as fishing.

Market valuations remain elevated and the risks include a worsening of the pandemic, current “temporary” inflation becoming embedded in the system – and policy errors by central banks managing the rocky road out of the pandemic. Tough decisions for governments and central bankers lie ahead, with policy decisions finely balanced, but many support measures are likely to remain in place for some time.

Important Information

The value of investments, and any income derived from them, can fall as well as rise and may be affected by exchange rate variations. Investors may get back less than invested. The fund may invest more than 35% in securities issued by any one or more of the governments listed in the fund prospectus. Such exposure may be combined with the use of derivatives in pursuit of the fund objective. It is not currently envisaged that the fund's exposure to such securities may exceed 35%. The information contained in this Financial Promotion does not constitute advice or a personal recommendation, nor does it constitute an invitation to purchase shares. Investments should be made on the basis of the Prospectus, Key Investor Information Document (KIID), and Supplementary Information Document (SID) available from Maitland Institutional Services Limited on request. We recommend that you seek advice concerning suitability from a regulated financial adviser. Maitland Institutional Services Limited is the Authorised Corporate Director of the Charles Stanley Investment Funds and is authorised and regulated by the Financial Conduct Authority, Registered in England No. 6252939. Registered Office: Hamilton Centre, Rodney Way, Chelmsford, Essex, CM1 3BY, United Kingdom. Although Charles Stanley's information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose.
