

Aberdeen Standard SICAV I - Brazil Bond Fund

I QInc USD

Performance Data and Analytics to 30 November 2019

For Professional Investors Only - Not For Use By Retail Investors

Summary investment objective

To achieve a combination of income and growth by investing mostly in bonds (which are like loans that pay a fixed or variable rate of interest) issued by companies, governments or other bodies based, or carrying out much of their business, in Brazil. The bonds will be of any credit quality and typically priced in Brazilian Real; the value of your investment may therefore be affected by the movements, up or down, of that currency. The Fund is intended for investors who are willing to accept a high level of risk.

For full investment objective and policy details refer to the Prospectus.

Cash includes cash at bank, outstanding settlements, call account cash, fixed deposits, cash used as margin and profit/losses on both derivative positions and forward currency contracts. Where bonds are split rated between two or more of S&P, Moody's and Fitch, the data shown takes a more conservative approach, splitting lower. This may not be consistent with the arrangement agreed in the prospectus, which may detail taking a higher rating where there is a split. In the absence of any agency ratings an internal Fund Manager rating may be applied. The benchmark shown reflects ratings from S&P, Moody's and Fitch only. This may differ from the ratings used by the benchmark provider. Figures may not always sum to 100 due to rounding.

Please note the risk analytics figures are calculated on gross returns whereas the performance figures are based on net asset value (NAV) returns. In addition, the risk analytics figures lag the performance figures by one month. It should be noted that the figures provided regarding risk would be adjusted if fund fees and expenses were included. Standard deviation measures historical volatility. Beta is a measure of the volatility of a portfolio in comparison to a benchmark index. Sharpe ratio measures risk-adjusted performance. Tracking error measures the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns. R-squared is a statistical measurement that determines the proportion of a fund's return that can be explained by variations in the market, as measured by a benchmark index.

Important information

Risk factors you should consider before investing:

- The value of shares and the income from them can go down as well as up and you may get back less than the amount invested.
- Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may not be able to pay the bond income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or a high number of sellers, it may be harder to sell particular bonds at an anticipated price and/or in a timely manner.
- Emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk.
- The Fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- The Sub-Fund's exposure to a single country market, which may be subject to particular political and economic risks, may cause the sub-fund to be more volatile than more broadly diversified funds.
- Performance may be strongly influenced by movements in currency rates. The value of your investment will either rise or fall in response to changes in foreign exchange rates between the base currency of the fund, and the currencies of the securities held by the fund.

Fund Statistics

Modified Duration	1.4
Weighted average life	1.6
Yield to Maturity	4.5
Yields ^A	6.00% underlying 6.00% distribution

^AThe Distribution Yield reflects the amounts that may be expected to be distributed (where a shareclass declares a distribution) over the next twelve months as a percentage of the mid-market share price of the fund as at the date shown. The Underlying Yield reflects the annualised income net of expenses and known irrecoverable withholding tax of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund as at the date shown. Both yields are based on a snapshot of the portfolio on the month-end date and are not guaranteed and actual distributions received (where a shareclass pays distribution) may be higher or lower than the amount stated. They do not include any initial charges and Investors may be subject to tax on distributions.

Yield to Maturity is the yield that would be realized on a bond or other debt instrument if the security was held until the maturity date.

Modified duration measures the change in the value of a security in response to a change in interest rates. The higher the duration, the greater the change (i.e., higher risk) in relation to interest-rate movements.
