Fund performance is the performance of the share class since its inception, shown net of fees including re-invested dividends in the base currency of the share class which is in USD. Performance can go up as well as down, and investors may lose some or all of their capital. Returns may increase or decrease as a result of currency and exchange rate fluctuations. Please refer to the 'Risks' section on Page 3 for more details on risks associated with an investment in the fund.

The ongoing charges figure is based on the Fund's annual management fee, whereby the Investment Manager is responsible for the costs involved in running the Fund. In the event that the Fund's running costs exceed the stated figure the Investment Manager shall pay the excess from its own assets. The ongoing charges figure excludes portfolio transaction costs. Details of the transaction costs are available from your broker or financial advisor and at www.ftgportfolios.com. The figure may vary from year to year.

We strongly recommend that you seek professional advice before making any investment decision. This document is marketing material intended for investors in the UK. It is not comprehensive and must therefore be read in conjunction with the Fund's prospectus, the relevant supplement and the UCITS key investor information document ("KIID").

- The ISE CTA Cloud Computing Exclusions Index™ is a comprehensive, rules based index designed to measure the performance of companies engaged in business activities in the cloud computing industry. These companies offer internet and technology products, services and applications delivered via the internet, as opposed to traditional computing which focuses on computer desktop applications.
- The Index employs a modified theme weighted methodology which weights each company by a "Cloud Score". The total securities in the Index is 80.
- To be included in the Index, a security must meet strict Security Eligibility Criteria: i. Minimum market capitalization of \$500 million; ii. Minimum free float of 20%; iii. Minimum three-month average daily dollar trading volume of \$5 million.
- A security must also meet certain ESG criteria
- All securities are classified according to the following three business categories: i. Infrastructure- as-a-Service (IaaS): Companies that on-demand service; ii. Platform-as-a-Service (PaaS): Companies that deliver a platform for the creation of software in the form of virtualization, middleware, and/or operating systems, which is then delivered over the Internet; iii. Software- as-a-Service (SaaS): Companies that deliver software applications over the Internet enabling other companies to conduct their operations using the application.
- The Index then employs Cloud Score Weighting: i. At every Index evaluation, each security has its Cloud Score calculated by receiving a score for each category (IaaS, PaaS, and SaaS), 1 if it is operating in that category and 0 if it is not. The maximum score that can be achieved is a 6 (3 for IaaS, 2 for PaaS, 1 for SaaS); ii. Each company's total score is divided by the total sum of the scores in the universe to determine the weight of each security; iii. Individual security weights are capped at 4.5%.
- The Index is reconstituted and rebalanced quarterly.

Risks

- **CAPITAL AT RISK.** The Fund may not achieve its investment objective and the value of shares in the Fund may fall. Investors may not get back the amount originally invested.
- Neither First Trust Global Portfolios Limited nor any of its affiliates, guarantees the performance or the future returns of the Fund.
- The Fund may be subject to information technology companies risk. Information technology companies are generally subject to the following risks: rapidly changing technologies; short product life cycles; fierce competition; aggressive pricing and reduced profit margins; the loss of patent, copyright and trademark protections; cyclical market patterns; evolving industry standards; and frequent new product introductions. Information technology companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. Information technology company stocks, particularly those involved with the Internet, have experienced extreme price and volume fluctuations that are often unrelated to their operating performance.
- The Fund may be subject to Chinese investment risks, including risk related to variable interest entities ("VIEs"). In China, direct ownership of companies in certain sectors by foreign individuals and entities is prohibited, and VIE structures are put in place to allow indirect foreign investment, including an investment by the Fund. Although VIEs are a longstanding industry practice and well known to officials and regulators in China, VIEs are not formally recognized under Chinese law. Intervention by the Chinese government with respect to VIEs could cause the market value of the Fund's associated holdings to suffer significant, and possibly permanent, effects which could negatively impact the Fund's Net Asset Value and could result in substantial losses. Further, it is uncertain whether any new laws, rules or regulations relating to VIE structures will be adopted or, if adopted, what impact they would have on the value of a Fund's shares.
- There is no assurance that the Index will continue to be calculated and published on the basis described in the prospectus and relevant supplement. In addition, the Fund's return may not match the return of the Index.
- See also the description of the risks applicable to the Fund in "Risk Factors" in the prospectus and relevant supplement.
