AWARDS AND RATINGS

Ratings are not a recommendation.

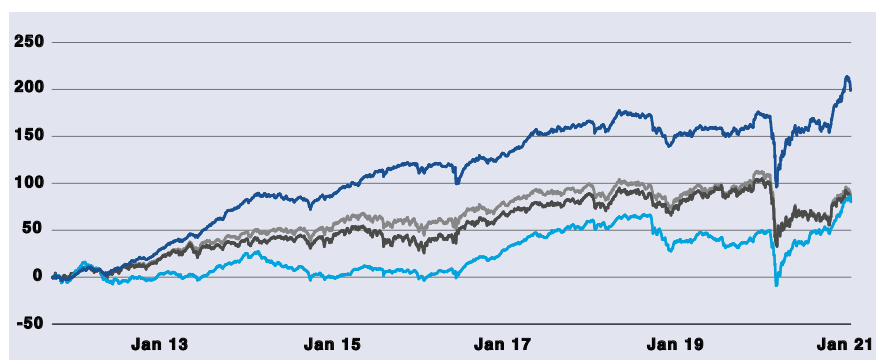

OBJECTIVE

The objective of the Fund is to provide an income with capital growth over the long-term, being five years or more. Five years is also the minimum recommended period for holding shares in this Fund. This does not mean that the Fund will achieve the objective over this, or any other, specific time period and there is a risk of loss to the original capital invested.

The income will be paid four times a year by dividend distributions.

RISKS

- The performance information presented in this factsheet relates to the past. Past performance is not a reliable indicator of future returns.
- The value of investments may fluctuate which will cause fund prices to fall as well as rise and investors may not get back the original amount invested.
- Fees will be deducted from capital which will increase the amount of income available for distribution; however this will erode capital and may constrain capital growth.
- Investment in the securities of smaller and/or medium sized companies can involve greater risk than may be associated with investment in larger, more established companies. The market for securities in smaller companies may be less liquid than securities in larger companies. This can mean that the Investment Manager may not always be able to buy and sell securities in smaller and/or medium size companies.
- In certain market conditions companies may reduce or even suspend paying dividends until conditions improve. This will impact the level of income distributed by the Fund.
- The Fund does not use derivatives extensively, although it may use them in an attempt to reduce risk, reduce costs and to generate additional income. Investing in derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions. Derivatives may expose the Fund to credit risks of counterparties, who may not meet payment obligations. The use of derivatives may result in the fund being leveraged (where economic exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will magnify losses.
- This fund may experience high volatility due to the composition of the portfolio or the portfolio management techniques used.
