Management Charges

Ongoing Charges Figure* 0.45%

*The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Objectives and investment policy

- The Fund seeks to provide an increase in the value of investments over the long-term (more than 5 years).
- The Fund is an active fund investing primarily in shares of U.K. companies, being those which are incorporated, domiciled or conduct a significant portion of their business in the U.K. Such companies may also be listed in the U.K. Under normal circumstances, at least 80% of the Fund's assets will be invested in shares of such companies.
- The Fund will be constrained by the FTSE All-Share Index (the "Index"), to a limited extent, with regard to its investment in sectors and country exposure. Whilst the Fund will invest in components of the Index, it is not tracking the Index and the Fund may hold investments that are not components of the Index.
- The Fund may also have exposure to bonds and other similar securities, other collective investment schemes (which themselves invest in securities which are consistent with the Fund's objective), money market instruments and cash deposits, and warrants. Money market instruments are investments usually issued by banks or governments that are a short term loan to the issuer by the buyer. Warrants provide the holder with the right, but not the obligation, to purchase a share at a fixed price or amount at a fixed time in the future.
- The Fund attempts to remain fully invested and hold small amounts of cash except in extraordinary market, political or similar conditions where the Fund may temporarily depart from this investment policy.

Investment manager

Baillie Gifford Overseas Ltd.

Glossary for fund characteristics

The fund characteristics section above contains a number of metrics that professional investors use to value individual stocks against a market or index average. These metrics can also be used to value and compare funds to the market by taking the average of all the stocks held in the fund and comparing them to those of the fund's benchmark index. We've provided a definition of the terms used for your convenience.

Median market cap (capitalisation) looks at all companies in a mutual fund portfolio and calculates the mid point market capitalisation. Market capitalisation represents the aggregate value of a company's stock.

Price earnings ratio (P/E ratio) of a stock is the price paid for a share divided by the annual profit earned by the firm per share. A stock with a price of £10 a share, and earnings last year of £1 a share, would have a P/E ratio of 10.

Price book ratio compares a stock's market value to its book value (the accounting value of a stock). It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

Return on equity is a measure of a company's profitability that reveals how much profit a company generates with the money shareholders have invested.

Earnings growth rate is a measure of growth in a company's net income (what remains after subtracting all the costs from a company's revenues) over a specific period (often one year). Earnings growth can apply to previous periods or estimated data for future periods.

Turnover rate is the total value of sales and purchases of stocks by a fund, less any subscriptions and redemptions monies into or out of a fund, expressed as a percentage of the fund's average value, over a specified period (usually one year).

Equity yield characteristics reflects distributions declared over the past twelve months as a percentage of the mid-market unit price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions.

Investment risk information

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Past performance is not a reliable indicator of future results.

Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

The Funds may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.
