FUND FACTSHEET
JUPITER UK SMALLER COMPANIES FOCUS FUND

I CLASS | GBP | INCOME
AS AT 30 SEPTEMBER 2023

EQUITIES **FIXED INCOME** **ALTERNATIVES**

FUND OBJECTIVE

The Fund aims to provide capital growth from investing primarily in an equity portfolio of UK smaller companies. Smaller companies are defined for this purpose as those companies which are quoted on a regulated market and which have a market capitalisation no greater than the largest company in the Numis Smaller Companies Index at the time of initial investment. The Numis Smaller Companies Index is designed to monitor the performance of the smaller companies sector. In seeking to achieve its investment objective, the fund will aim to deliver a return, net of fees, greater than that of the Numis Smaller Companies Index excluding Investment Companies over rolling 3 year periods.

DAVID **CAMERON-MOWAT**
INVESTMENT MANAGER

Summary Risk Indicator (SRI):
The SRI is based on past data, may change over time and may not be a reliable indication of the future risk profile of the fund. The lowest category does not mean 'no risk'. Please see the KID for further information.

Investment risk - there is no guarantee that the Fund will achieve its objective. A capital loss of some or all of the amount invested may occur.
Geographic concentration risk - a fall in the UK market may have a significant impact on the value of the Fund because it primarily invests in this market.
Company shares (i.e. equities) risk - the value of Company shares (i.e. equities) and similar investments may go down as well as up in response to the performance of individual companies and can be affected by daily stock market movements and general market conditions. Other influential factors include political, economic news, company earnings and significant corporate events.
Smaller companies risk - smaller companies are subject to greater risk and reward potential. Investments may be volatile or difficult to buy or sell.
Liquidity risk - some investments including those in unlisted companies may be hard to value or sell at a desired time and price. In extreme circumstances this may affect the Fund's ability to meet redemption requests upon demand.
Currency risk - the Fund can be exposed to different currencies. The value of your shares may rise and fall as a result of exchange rate movements.
For a more detailed explanation of risks, please refer to the **"Risk Factors"** section of the prospectus.

OTHER INFORMATION

Past performance is not a guide to future performance and may not be repeated. Investment involves risk. The value of investments and the income from them may go down as well as up and investors may not get back the amount originally invested. Because of this, an investor is not certain to make a profit on an investment and may lose money. Exchange rate changes may cause the value of overseas investments to rise or fall.

- The net asset value of the Fund may have high volatility due to the nature of the asset class invested.

Your attention is drawn to the stated investment policy which is set out in the Fund's prospectus.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. For more detailed information about Morningstar's Medalist Rating, including its methodology, please go to: https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx.The Morningstar Medalist RatingTM is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about these ratings, including their methodology, please go to global.morningstar.com/managerdisclosures/.

The Morningstar Medalist Ratings are not statements of fact, nor are they credit or risk ratings. The Morningstar Medalist Rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks and uncertainties which may cause expectations not to occur or to differ significantly from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions or models when determined algorithmically, (iv) involve the risk that the return target will not be met due to such things as unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, tax rates, exchange rate changes, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product. A change in the fundamental factors underlying the Morningstar Medalist Rating can mean that the rating is subsequently no longer accurate. Morningstar Medalist Rating Data Coverage Percent 100%

The ongoing charges figure is based on the expenses of the Fund for the 12 month period ended Jul 2022. Where the Fund invests in other underlying funds, which may include closed-ended funds such as investment trusts, the ongoing charges figure will include the ongoing charges for those funds, and will therefore vary from year to year. The ongoing charges figure excludes portfolio transaction costs, except in the case of an entry/ exit charge paid by the Fund when buying or selling shares in another collective investment undertaking.

PRI Principles for Responsible Investment

JUPITER ASSET MANAGEMENT

Jupiter Factsheet – Glossary

Absolute return : the total return of an asset, portfolio or fund over a given period of time OR an investment approach that attempts to achieve a return which is not benchmarked against an index

Ask / Bid price : the lowest price a seller is willing to sell a security for / the highest price a buyer is willing to pay for a security

Bond : a debt instrument ('I Owe You') issued by a company (corporate bond), government (sovereign/government bond) or other institution in order to raise money. In most cases, bonds pay a fixed interest rate (coupon) over a fixed period of time and will be repaid on a particular date. **See Coupon**

CFROI : means cash flow return on investment

Convertibles : securities (e.g. bonds or preference shares) that can be exchanged at some point in the future for a specified number of shares at a specified price of the company issuing the securities. **See Bond.**

Coupon : denotes the interest in % paid on a bond See Bond.

Credit rating : an assessment of a borrower's credit worthiness, i.e. the likelihood of the borrower to repay its debts.

Delta/Weighted Average Delta : delta measures the change in value of a derivative from a change in the price of the underlying asset. It is sometimes referred to as the "hedge ratio." **Weighted Average Delta** refers to the overall delta of a collection of derivatives based on the delta of each individual derivative and their respective "weight" or size in the collection as a whole. **See Derivative.**

Derivative : a financial instrument that derives its value from its underlying assets. Common underlying assets include stocks, bonds, commodities, currencies, interest rates and market indices. Futures contracts, forward contracts, options and swaps are the most common types of derivatives. Derivatives can be purchased 'on margin', i.e. at a fraction of the value of the underlying asset. Thus, they are 'leveraged' instruments where the risk of loss can be greater than the initial outlay. Derivatives can be used like insurance contracts (i.e. to hedge market risk) or for investment purposes. **See Hedge, Leverage.**

Distribution Yield : the total interest paid by a fund divided by the fund's value.

Duration/Modified Duration : Duration estimates the sensitivity of a bond or bond fund to changes in interest rates. It is measured in years. The longer a bond's duration, the more sensitive it is to interest rate movements. Modified duration estimates the effect that a 1% change in interest rates will have on the price of a bond or bond fund.

Economic Gross : the gross exposure adjusted to account for investments with mutually exclusive outcomes, for example a short position hedge on a share that is also held as a long position. **See Gross exposure, Long/short position, Hedge.**

Effective Duration : estimates the sensitivity of a bond's price to changes in benchmark interest rates. Effective duration is required for the measurement of interest rate risk for complex types of bonds. **See Bond.**

Engagement : means dialogue with management teams and boards, including nonexecutive directors. Engagement enables us to assess and influence how businesses are managed.

Equity : a share representing an ownership interest in a company. Equity market means stock market.

Exchange Traded Fund (ETF) : a fund vehicle that is traded like a stock on a stock exchange. It is used to track and mimic the performance of a specific market index.

Exposure : Describes the level of risk to a particular asset, asset type, sector, market or government. Also, the directional market exposure of a (absolute return) fund. **See Absolute Return, Gross/Net exposure.**

Fixed interest/income : denotes debt instruments (securities) that pay a fixed interest rate (e.g. bond, commercial paper). Also, a universal term for bond or debt investing. **See Bond**

Floating rate note (FRN) : a bond with a variable interest rate. The interest rate is variable as it is tied to a benchmark such as LIBOR (London Interbank Offered Rate). **See Bond.**

Futures : an exchange traded contract between two parties to buy or sell a commodity or a financial instrument at a pre-determined price at a future date. **See Bond Future, Derivative.**

Gearing : measures a company's borrowings (debt) as a proportion of assets. **See Leverage.**

Gross exposure : the percentage value of the long positions plus the percentage value of the short positions. **See Net exposure.**

Hedge : an investment designed to reduce the risk of adverse price movements in an asset by taking an offsetting position. Derivatives are usually used as hedging tools. **See Derivative.**

High Water Mark : the highest level that a fund's net asset value (NAV) has reached at the end of any 12-month accounting period. **See Net Asset Value.**

Hurdle Rate : the minimum level of return required before a fund can charge a performance fee. **See Performance fee.**

Leverage : the use of financial instruments (e.g. debt) to increase the potential return of an investment. **See Notional value.**

Liquidity : measures how easily an asset or security can be converted into cash.

Long/short position : a long position is buying a security with the expectation that it will deliver a positive return if its value goes up and a negative return if its value falls. Conversely, a short position involves selling a borrowed security with the expectation of buying it back at a lower price to make a profit. However, if the security goes up in value, a short position will make a loss.

Maturity : refers to a finite time period at the end of which a security/debt instrument is due to be repaid. **See Bond.**

Money market : markets in which short-term (less than one year) debt instruments are traded. Money market instruments are typically cash deposits and commercial papers.

Net asset value : in relation to a fund, the market value of its assets less its liabilities. The market value is usually determined by the price at which an investor can redeem shares.

Net exposure : the percentage value of the long positions less the percentage value of the short positions. **See Gross Exposure, Long/short Position**

Non-rated bonds : bonds that are not rated. **See Bond.**

Notional value : commonly used in relation to a derivative, denotes the theoretical value of its underlying asset. **See Derivative**

Open-ended Investment Company (OEIC) : a fund vehicle, which can issue a limitless number of shares whose value are directly linked to the value of its underlying investments. OEICs normally list a single price based on the NAV. **See Net Asset Value**

Performance fee : a fee paid to an asset manager for generating positive returns above a hurdle rate.

Preferred bonds : have greater seniority when a bond issuer repays its debts. In the event that the issuer cannot repay all its debt, the holders of preferred bonds will be further forward in the queue for repayment than holders of other ('nonpreferred') bonds.

Regional Definitions : DM = Developed Markets, EM = Emerging Markets, FR = Frontier Markets, SA = Standalone.

Risk and Reward Profile : The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. The lowest rank does not mean 'no risk'. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund.

Share : a unit of ownership interest in a company or financial asset. **See Equity.**

SICAV : Société d'Investissement à Capital Variable. A type of open-ended fund widely used in Europe.

Spread : the difference between the bid and the ask price of a single security. It can also refer to the difference in price between two securities. See Ask/Bid price. Total return: the capital gain or loss plus any income generated by an investment over a given period.

Stewardship : our responsibility to understand and manage investment risks we take on behalf of our clients. We consider material Environmental, Social and Governance ('ESG') information in the same way as we consider other types of investment analysis. These three factors enable us to evaluate how companies interact with the Environment (such as climate change), Society (human rights) and Governance (management). Stewardship entails a responsibility to monitor and engage with the companies in which we invest.

Sustainability : by appropriately considering ESG risks and engaging with companies, we strive to generate long term, sustainable returns for our clients.

Unit Trust : A fund vehicle which can issue a limitless number of units whose value are directly linked to the value of its underlying investments. Jupiter Unit Trusts are single priced, which means they have one price for buying and selling.

Value at Risk (VaR) : value at Risk, a mathematical way of measuring the maximum expected loss of an investment over a period of time.

Volatility : measures how much the price of a security moves up or down over a period of time. A stock that experiences big price swings has high volatility, while one which moves up or down in smaller increments has low volatility.

Yield to Maturity : Yield to maturity (YTM) measures the annual return an investor can anticipate for holding a particular bond until it matures. When considering an entire bond portfolio, an average yield is used based on the weightings of individual bonds within that portfolio. The YTM (Share class Level) is an indicative measure which adjusts the base currency YTM by the estimated cost of hedging between the share class currency and the base currency.

Yield : the rate of interest or income on an investment, usually expressed as a percentage
