The Distribution Yield reflects the amounts that may be expected to be distributed over the next twelve months as a percentage of the mid-market unit price of the fund as at the date shown. It is based on a snapshot of the portfolio on that day. It does not include any preliminary charges and investors may be subject to tax on distributions.

The Underlying Yield reflects the annualised income net of expenses of the fund (calculated in accordance with the relevant accounting standards) as a percentage of the mid-market unit price of the fund as at the date shown. It is based on a snapshot of the portfolio of that day. It does not include any preliminary charge and investors may be subject to tax on distributions. The Distribution Yield is higher than the Underlying Yield because the funds expenses are charged to capital. This has the effect of increasing distributions and constraining the fund's capital performance.

For full details of the fund's risks, please see the latest prospectus and the Key Investor Information Document (KIID). Other share classes are available.
