AUTHORISED STATUS

IFSL Marlborough No 2 OEIC (the Company) is an investment company with variable capital incorporated under the Open Ended Investment Company (OEIC) Regulations 2001. It is a UCITS scheme as defined in the Collective Investment Schemes Sourcebook (COLL) and is an umbrella company for the purposes of the OEIC Regulations. The Company is incorporated in England and Wales with the registration number IC000415 and is authorised and regulated by the Financial Conduct Authority with effect from 21 October 2005. The shareholders are not liable for the debts of the Company.

Shareholders of the sub-funds do not have any proprietary interest in the underlying assets of the Company and will not be liable for the debts of the Company. A sub-fund is not a legal entity. If the assets attributable to a sub-fund were insufficient to meet its liabilities the shortfall will not be met out of the assets attributable to one or more other sub-funds of the Company. The sub-funds are segregated by law under the Protected Cell Regime.

The Company currently has five sub-funds: IFSL Marlborough Far East Growth Fund; IFSL Marlborough Global Essential Infrastructure Fund; IFSL Marlborough Global SmallCap Fund; IFSL Marlborough Multi Cap Income Fund; and IFSL Marlborough Nano-Cap Growth Fund

GENERAL INFORMATION

IFSL Marlborough Far East Growth Fund

Investment objective

The investment objective of the sub-fund is to provide capital growth, that is, to increase the value of your investment, over a minimum of 5 years.

The sub-fund aims to outperform the average of the IA Asia Pacific excluding Japan sector over any 5 year period, after any charges have been taken out of the sub-fund, however, there is no certainty this will be achieved.

Investment policy

At least 80% of the sub-fund will be invested in the shares of companies which are incorporated, headquartered, operating in or listed on stock markets in the Asia Pacific region (excluding Japan).

This may include up to 10% through funds (including exchange traded funds which typically track an index) which themselves invest in these markets or which gain exposure through financial instruments whose returns are linked to these markets (also known as derivatives). The sub-fund may also invest in shares of investment trusts and other securities whose returns are linked to company performance, such as depositary receipts.

The sub-fund may also hold money market instruments, a type of short term loan, and money market funds, which themselves invest in these instruments.

The sub-fund is actively managed which means the Manager decides which investments to buy or sell and when, and will maintain a relatively concentrated portfolio. The sub-fund will normally hold between 50 – 70 holdings in companies of a range of sizes and will not go outside this range for more than 3 consecutive months or exceed between 45 – 80 holdings.

The team approaches construction of the portfolio from three overlapping standpoints:

- economic and market conditions in each country and sector;
- a selection of companies which the team believes to be financially strong or whose valuations appear out of line with expectations; and
- companies which fit broader themes, such as, manufacturing automation, which the investment team believes are likely to drive share price returns over the medium term. Themes will change and this can often happen quickly.

The team use the Morningstar OIP Asia Ex Japan Net Return Index as a reference point for portfolio construction and risk management purposes, however, the sub-fund will not be constrained by the Index.

The sub-fund may invest in derivatives and forward transactions, including those whose returns are linked to exchange rates, in order to reduce risk (also known as hedging) although this is anticipated to be infrequent.

The sub-fund may hold cash to enable ready settlement of liabilities, for the efficient management of the sub-fund and in order to meet its objective. This will typically be below 10% but may from time to time exceed this level.

GENERAL INFORMATION

IFSL Marlborough Far East Growth Fund (continued)

Performance target

The performance target is the level of performance the sub-fund aims to deliver however there is no certainty this will be achieved.

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics. The sub-fund aims to be in the top half of all funds included in the IA Asia Pacific excluding Japan sector.

Assessing performance

To assess the performance of the sub-fund, you may want to compare it to the performance of the Morningstar OIP Asia Ex Japan Net Return Index, which the investment team uses as a reference point for portfolio construction and risk management purposes, however the sub-fund is not constrained by this index.

IFSL Marlborough Global Essential Infrastructure Fund

Investment objective

The investment objective of the sub-fund is to provide capital growth, that is, to increase the value of your investment, as well as to provide income, that is, money paid out from an investment as dividends from shares, over a minimum of 5 years.

Investment policy

The sub-fund will invest at least 80% in the shares of global infrastructure companies, including investment companies and investment trusts, listed on a range of global developed and emerging market stock exchanges, however exposure to emerging markets will be limited to 10% of the sub-fund. Notwithstanding the emerging markets limit, investments will span a range of global markets with no maximum or minimum exposure to any other market or geographical region.

The sub-fund is actively managed, which means the Investment Manager decides which investments to buy or sell and when. The sub-fund will generally hold between 25 and 45 listed companies.

The Investment Manager seeks to invest in global infrastructure companies that have assets that are "essential" for the basic functioning of a society, such as regulated utilities (eg electricity, gas and water), transport (eg toll roads, airports), energy (eg regulated or contracted pipelines) and communications (eg mobile phone towers).

The sub-fund may, from time to time, hold shares in companies that become unquoted following investment, due to a delisting or other corporate event, for example. The sub-fund will not make new investment into the shares of companies that are unquoted.

The sub-fund will not invest in other collective investment schemes.

The sub-fund may hold up to 20% in cash or near cash, to enable the ready settlement of liabilities (including redemptions), for the efficient management of the sub-fund and in pursuit of the sub-fund's objectives.

The sub-fund will not invest in derivatives (instruments whose returns are linked to another asset or other variable factor such as exchange rates or stock markets).

Investment strategy

The Investment Manager reviews financial publications, available broker opinions and talks to the directors and/or management of the companies that are within the scope of the investment policy, to form views on which companies are suitable for buying and selling. The Investment Manager will assess the appropriate weightings for each sector and company based on their view of the market and outlook for the future.

The Investment Manager aims to exploit the inefficiencies within the global listed infrastructure universe by conducting thorough research and analysis which considers the overall quality and long-term cash flow valuation of a company.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The sub-fund's investment policy puts it in the IA Infrastructure sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

GENERAL INFORMATION

IFSL Marlborough Global SmallCap Fund

Investment objective

The investment objective of the sub-fund is to provide capital growth, that is, to increase the value of your investment, over a minimum of 5 years.

The sub-fund aims to deliver greater returns than the MSCI World Small Cap Index in GBP over any 5 year period after charges, however, there is no certainty this will be achieved.

Investment policy

The sub-fund will invest in the shares of companies, of which at least 90% of the sub-fund will be in the shares of small companies listed on a range of global stock exchanges. Investments will span a range of global markets with no maximum or minimum exposure to any one market or geographical region.

The Investment Manager defines small companies as either:

- any company within the MSCI World Small Cap Index above a market capitalisation (the market value of a company's shares) of USD 500 million.
- any company, that is not part of the above index, with a market capitalisation between USD 500 million and USD 5 billion listed in the developed countries represented within the MSCI World Small Cap Index.

Any company that no longer meets either of the above definitions will be sold within 12 months, where possible.

The sub-fund may, from time to time, hold shares in companies that become unquoted following investment, due to a delisting or other corporate event. The sub-fund will not make new investment into the shares of companies that are unquoted.

The sub-fund is actively managed, which means the Investment Manager decides which investments to buy or sell and when. The sub-fund will generally hold between 50 and 80 listed companies.

The sub-fund will not invest in other collective investment schemes.

The sub-fund may hold up to 10% in cash or near cash, to enable the ready settlement of liabilities (including redemptions), for the efficient management of the sub-fund and in pursuit of the sub-fund's objectives.

The sub-fund will not invest in derivatives (instruments whose returns are linked to another asset or other variable factor such as exchange rates or stock markets).

Investment strategy

The Investment Manager reviews financial publications, available broker opinions and talks to the directors and/or management of the companies that are within the scope of the investment policy, to form views on which companies are suitable for buying and selling. The Investment Manager will assess the appropriate weightings for each sector and company based on their view of the market and outlook for the future.

The Investment Manager aims to exploit the inefficiencies within the asset class by investing in quality companies, which in their view display unrecognised growth potential at attractive valuations.

Performance target

The performance benchmark is the level of performance the sub-fund aims to deliver however there is no certainty this will be achieved.

The MSCI World Small Cap Index has been chosen as the performance target as the composition of the index is broadly similar to the holdings in the sub-fund.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The sub-fund's investment policy puts it in the IA Global sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

GENERAL INFORMATION

IFSL Marlborough Global SmallCap Fund (continued)

Assessing performance (continued)

You should note that whilst the IA Global Sector represents the global nature of the sub-fund, the sector contains funds investing across the market capitalisation spectrum from large cap to small cap. Therefore, when larger cap shares are performing better than small cap shares the sub-fund is more likely to underperform the sector. Conversely, the sub-fund is more likely to outperform the sector when small cap shares perform better than large cap shares.

IFSL Marlborough Multi Cap Income Fund

Investment objective

The investment objective of the sub-fund is to provide income, that is, money paid out from an investment as dividends from shares, as well as to deliver capital growth, that is to increase the value of your investment, over a minimum of 5 years.

The sub-fund aims to deliver a greater income than the FTSE All-Share Index, over any 3 year period, after any charges have been taken out of the sub-fund, however, there is no certainty that this will be achieved.

Investment policy

The sub-fund will invest at least 80% in the shares of companies and investment trusts listed on UK stock exchanges. This will include a range of small, medium and large companies, with a bias towards small and medium companies.

The sub-fund is actively managed, which means the manager decides which investments to buy and sell and when. Investments are selected based on individual company research.

The sub-fund invests in companies which the manager believes:

- · have the ability to increase their dividends and offer the potential for growth; or
- companies which have previously paid steady dividends and are expected to continue to do so.

The sub-fund may also invest in companies which are listed on overseas stock exchanges, other securities which offer returns linked to the company performance, such as warrants, preference shares and convertible bonds, unquoted companies and other funds.

The sub-fund will normally be fully invested save for an amount to enable ready settlement of liabilities (including redemption of shares) and efficient management of the sub-fund both generally and in relation to strategic objectives however may hold higher cash balances in extreme market conditions.

Performance target

The performance benchmark is the level of performance the sub-fund aims to deliver however there is no certainty this will be achieved.

FTSE All-Share Index has been chosen as the performance target as the composition of the index is broadly similar to the holdings in the sub-fund.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The sub-fund's investment policy puts it in the IA UK Equity Income sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

IFSL Marlborough Nano-Cap Growth Fund

Investment objective

The investment objective of the sub-fund is to increase the value of your investment by more than any increase in the FTSE SmallCap Index (ex-Investment Companies) over any 10 year period, after any charges have been taken out of the sub-fund, however, there is no certainty this will be achieved.

GENERAL INFORMATION

IFSL Marlborough Nano-Cap Growth Fund (continued)

Investment policy

At least 80% of the sub-fund will be invested in the shares of very small companies and investment trusts listed on UK stock exchanges. These are companies whose market capitalisation (the market value of a company's shares) is £200m or less at the time the initial purchase is made.

The aim of the investment team is to identify companies which they believe show good long-term growth potential or which appear to be under-valued given their future prospects.

The team consider economic and market conditions but the main focus is on individual company analysis and selection.

Following the same investment philosophy the sub-fund may also invest in companies which are listed on overseas stock exchanges, the shares of larger companies, other securities which offer returns linked to the company performance, such as, preference shares, convertible bonds and warrants, and unquoted companies.

The sub-fund is actively managed, which means the investment manager decides which investments to buy or sell and when. The sub-fund invests in a diverse portfolio of investments and is not constrained by any industry or sector.

The sub-fund may hold cash, government bonds and money market instruments (short terms loans typically issued by governments and banks) to enable ready settlement of liabilities (including the redemption of units), for the efficient management of the sub-fund and in order to meet its objective.

Performance target

The performance benchmark is the level of performance the sub-fund aims to deliver however there is no certainty this will be achieved.

The FTSE SmallCap Index (ex-Investment Companies) has been chosen as the performance target as the composition of the index is broadly similar to the holdings in the sub-fund.

Assessing performance

The Investment Association (IA), the trade body for UK investment managers, has created a number of 'sectors' as a way of dividing funds into broad groups with similar characteristics.

The sub-fund's investment policy puts it in the IA UK Smaller Companies sector. You may want to assess the sub-fund's performance compared to the performance of this sector.

Rights and terms attached to each share class

A share of each class represents a proportional entitlement to the assets of the sub-fund. The allocation of income and taxation and the rights of each share in the event that a sub-fund is wound up are on the same proportional basis.

Changes in prospectus

There have been no significant changes since the last annual report.

Up to date Key Investor Information Documents, Prospectus and Long Reports and Financial Statements for any fund within the AFM's range, can be requested by the investor at any time.

Cross Holdings

The sub-funds of the Company do not hold shares in other sub-funds of the Company.

AUTHORISED CORPORATE DIRECTORS' STATEMENT

This report has been prepared in accordance with the requirements of the Collective Investment Schemes Sourcebook as issued and amended by the Financial Conduct Authority.

Allan Hamer Director Helen Redmond Director

4. Leamono

Investment Fund Services Limited 22 March 2024

NOTES TO THE INTERIM FINANCIAL STATEMENTS

for the six month period ended 31 January 2024

Basis for preparation

The interim financial statements have been prepared in compliance with UK Financial Reporting Standard 102 ("FRS 102") and in accordance with the Statement of Recommended Practice ("SORP") for Authorised Funds issued by the Investment Association in May 2014 and amended in June 2017.

The interim financial statements are prepared in sterling, which is the functional currency of the sub-funds. Monetary amounts in these financial statements are rounded to the nearest pound.

The interim financial statements have been prepared on the historical cost convention, modified to include the revaluation of investments and certain financial instruments at fair value.

Accounting policies

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 July 2023 and are described in those annual financial statements.

The investments of the sub-funds have been valued at their fair value at 12 noon on 31 January 2024.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 January 2024

Performance to 31 January 2024

	Six months	<u>1 year</u>	<u>3 years</u>	<u>5 years</u>
IFSL Marlborough Far East Growth Fund	3.20%	(3.97)%	(10.73)%	7.61%
IA Asia Pacific excluding Japan Sector	(5.71)%	(10.76)%	(13.17)%	19.93%
Morningstar OIP Asia excluding Japan Net Return Index	(5.08)%	(7.07)%	(14.07)%	16.75%

External Source of Economic Data: Morningstar (P Accumulation - quoted price to quoted price).

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

Performance statement

For the 6-month period to 31 January 2024, the sub-fund's P Accumulation shares returned 3.20%. This compared to a fall of -5.71% in the Investment Association (IA) Asia Pacific excluding Japan sector, which is the sub-fund's peer group benchmark*.

Market review

The equities markets in Asia Pacific fell overall during the reporting period. News flow regarding the domestic Chinese economy disappointed investors. There were numerous areas of weakness, including the manufacturing sector, service industries and property sales. The Thai equity market also struggled on news of a disappointing economic recovery and lack of government policy stimulus. In addition, coupled with a lower currency, weak investor sentiment drove the outflow of funds from the market. Taiwan equities performed strongly, mainly driven by the strength in the Information Technology sector on the back of a positive outlook in the semiconductor sector, supported by growth in Artificial Intelligence (AI). The Australian and Indian equity markets also shined. India was supported by strong data as well as positive outcome from the State Elections. Australia's performance was driven more by company specific events as well as a year-end rally on the back of a higher probability of American interest rate cuts occurring sooner than expected.

Sub-fund performance and activity

The sub-fund performed better than the benchmark during the reporting period. The performance was driven by a lower weight than the benchmark to China and Hong Kong. The sub-fund had been proactively reducing its exposure to China on continued weak macro data releases and unclear policy guidance. Geopolitical tension, waning investor confidence and fund outflows further supported the case to reduce exposure to China.

Higher weights than the benchmark to Australia, India and Taiwan contributed positively to performance. Australia continues to be favoured due to the higher quality and strong free-cash-flow companies quoted there. Our conviction in India is based on strong economic growth dynamics such as a young population and a strong domestic investment cycle which is lacking elsewhere in the region. Our conviction in Taiwan is driven mainly by its superior technology companies benefitting from the AI trend.

In terms of sector performance, compared to the benchmark, our higher weights in the Information Technology sector and lower weights in Consumer sectors were key reasons for the performance. With respect to activity, we trimmed companies with exposure to the Consumer and Communication Services sectors and increased exposure to companies in the Information Technology, Industrials and Energy sectors.

Investment outlook

In addition to the uncertainty around the pace of US interest rate cuts and the risk of a US recession, the backdrop is likely to continue to be challenging as investors seek confidence in China's policy response to the slowing economy. In the event of a US rate cut Asian countries are likely to benefit from a potentially weaker US\$ and lower borrowing costs. Geopolitical tensions, including trade restrictions or the multiple national elections taking place globally this year, will add to market volatility.

LOWOOL OHALO PHOO	200.00	200.40	200.00	200.02

^A The return after charges is calculated using the underlying investments bid prices.

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each share class in the period. Where it is considered unsuitable to use the total expenses paid by each share class in the period to calculate the OCF because of material changes to the sub-fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the subfund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Low	er risk						Higher risk	
\leftarrow								
Турі	cally lower rew	vards				Typic	cally higher rewards	
	1	2	3	4	5	6	7	

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio are used.

This sub-fund has been measured as 5 because its investments have experienced moderate to high volatility historically. During the period the synthetic risk and reward indicator has remained unchanged.

^B On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C These figures have been annualised.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

Performance statement

Sub-fund performance for the six month period to 31 January 2024 was -3.18% versus the benchmark*, the Investment Association (IA) Infrastructure sector, return of -2.34%.

Market review

The past six months have seen investors take a more positive view on markets, driven by robust economic data and strong corporate earnings. The characteristics of 'Essential Infrastructure' business models derive from the defensive, regulated and contracted business models that are less sensitive to changes in the overall economic cycle. We have not seen a full economic cycle due to significant financial help from central banks and governments following COVID. Hence the cycle has gone from boom to slowdown to boom, skipping the much-anticipated recession and much of what would have been a typical slowdown in a normal cycle. This unusual market has now seen unemployment fall to a 50-year low and the economy remains much more resilient than would be normally expected.

Against this backdrop, the performance of the Essential Infrastructure sector compared to the wider market has been disappointing. The main reason being that the long-term discounted cashflow valuation models of companies, especially those with utility exposure, are more sensitive, in a negative way, to rising interest rates. In the period, Energy Infrastructure (+6.1%), Transportation (+4.4%) and Communications (+3.4%) all traded higher while the Utilities sector was significantly behind, posting -10.4% return for the period.

Sub-fund performance and activity

Over the six-month period under review, the sub-fund has continued to increase investment in energy infrastructure such as gas pipeline and storage facilities, and reduce overall utilities exposure. The sub-fund has increased its exposure in North America and the UK and reduced exposure to companies quoted in Asia Pacific and Europe.

The three largest positive contributions to sub-fund performance over the period under review were from Ferrovial, TC Energy and American Tower.

Ferrovial advanced +18% in the period as the company continues to execute strongly on its business plan. In the period, the company's largest toll-road concession, the ETR 407 located in Toronto Canada, announced their first changes in tolls since COVID. The company also executed on a key asset sale with the announcement of the sale of their 25% stake in Heathrow airport for £2.4bn. The proceeds from the exit of Heathrow Airport (which it has owned for the past 17 years) will be invested into their new JFK airport Terminal One project.

TC Energy (TRP) is one of the largest energy infrastructure companies in North America, with a network of natural gas and oil pipelines and power assets. The shares advanced +16% in the period as the company continued to execute on its strategy to sell-off their liquid pipeline business in 2H 2024 which will create two separate companies that will be more transparent and hence investors may value more highly.

American Tower (AMT), and more broadly the mobile communication sector, were strong performers in the period as corporate activity supported the sector's positive outlook. The name continues to be attractive on long term valuation and remains a core holding in the sub-fund.

The negative contributors in the period were led by the utility exposures and, more specifically, the renewable energy exposures in the sub-fund. We retain our high conviction on the long-term characteristics of the sector and continue to prefer to invest in the heavily regulated renewable exposures, but the short-term share price weakness hurt in the period.

Ørsted was the largest detractor in the group as the company mismanaged their US expansion which led to the cancellation of the Ocean Wind offshore wind project and a large write down in their investment. This led to a loss of confidence in the management team and raised significant uncertainty in their balance sheet. As such, we exited the position and realised that loss in the period.

^A Since launch period ended.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 January 2024

Investment commentary (continued)

Sub-fund performance and activity (continued)

NextEra, the largest US onshore wind operator, also traded lower in the period down -18% as the negative sentiment in the sector spread over to their name as well. We continue to remain comfortable with our NextEra position as the risk profile is considerably lower (and higher quality) than Ørsted given 70% of NextEra is a regulated utility. From an investment perspective, the combination of quality, its environmental, social and governance attributes and valuation continue to support the company's positive outlook.

Market outlook and sub-fund strategy

Economic data is showing positive signs, with fears of a recession dissipating and interest rate cuts being postponed. Coupled with the increasing allocations to artificial intelligence related technology, this has created a challenging environment for long-duration, defensive assets like Essential Infrastructure.

However, taking a broader view, valuations are currently as attractive as they have been since 2008's global financial crisis. Fundamentals are exceeding expectations overall, and the growth outlook appears exceptionally strong, with factors such as reflecting inflation's impact on prices, increased grid spending, and the ongoing energy transition playing significant roles.

Despite the prevailing negative sentiment towards Essential Infrastructure, we firmly believe that the current difference between positive company fundamentals and seemingly depressed share prices cannot persist indefinitely. The anticipated start of the interest rate cutting cycle, though delayed, should serve as a positive catalyst for the sector. Therefore, our confidence in the outlook for this asset class remains as strong as it has ever been.

^A Period from 17 October 2022 being the end of the launch period.

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each share class in the period. Where it is considered unsuitable to use the total expenses paid by each share class in the period to calculate the OCF because of material changes to the sub-fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the subfund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

^B The return after charges is calculated using the underlying investments bid prices.

^C On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^D These figures have been annualised.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Lower risk		Higher risk				
						
Typically lower rew	vards				Typic	cally higher rewards
1	2	3	4	5	6	7

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

Performance statement

Sub-fund performance for the six months ending in January 2024 was 7.35% (net of fees) versus the benchmark* return of -0.33%, as measured by the MSCI World Small Cap Net Total Return Index.

Market review

The past six months have seen investors willing to take on more risk, driven by robust economic data and strong corporate earnings. In terms of the benchmark, smaller companies quoted in the US performed less well than the overall Index, compared to UK quoted smaller companies that performed better. Hong Kong and New Zealand were the worst performing countries, while Ireland and Italy performed well.

Performance across the sectors** was mixed during the period under review. The defensive sectors of utilities and health care were the worst performing sectors. The best performing sectors were financials and consumer staples.

Sub-fund performance and activity

Notable positive contributors to relative performance over the period were Vertiv Holdings in the US, Horiba in Japan and BE Semiconductors (BESI) in the Netherlands. Negative contributors to performance were Kempower in Finland, Inmode in Israel and Paradox Interactive in Sweden.

Vertiv Holdings is a leading provider of critical digital infrastructure solutions with a strong focus on data centres, offering a comprehensive portfolio of products and services to ensure the availability and reliability of essential applications across a wide range of industries. Vertiv has been a key holding in the sub-fund for over two and a half years. Given the strong demand for data centres and advanced computing, including AI (Artificial Intelligence), we expect Vertiv to deliver attractive earnings growth in the coming

Horiba is a Japanese company specialising in the development and manufacturing of precision instruments and systems for various industries. Horiba's Environmental and Process Monitoring segment offers a variety of instruments for environmental monitoring, including air and water quality analysis. Horiba's semiconductor equipment segment provides semiconductor manufacturing equipment, focused on efficient production and quality control processes in the semiconductor industry. The sub-fund expects these segments to experience robust demand going forward which may lead to revenue and earnings growth currently not recognised by investors and therefore offering an opportunity for share price increases.

BE Semiconductor Industries (BESI) is a leading assembly equipment supplier in the advanced packaging back-end market based in the Netherlands. This segment of the semiconductor industry focuses on packaging and assembly of integrated circuits after their fabrication and is becoming ever more critical. The sub-fund expects these themes to be supportive for the earnings of BESI in the coming years. BESI's earnings results in October showed strong cost management and significant improvement in customer orders which benefitted the share price.

Kempower is a Finnish developer and manufacturer of electric vehicle fast charging units. It has seen rapid growth in its local region of Northern Europe and has expanded further across Europe and into the UK. The group have also won recent contracts in the US and Australia. Kempower's share price struggled during the period as renewable energy companies and companies exposed to electric vehicles' (EVs) demand performed poorly.

Inmode is a leader in non-invasive and minimally invasive cosmetic procedures. The Inmode share price came under pressure during the period as US and global consumer demand remained sluggish due to higher interest rates and ongoing elevated inflation.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 January 2024

Investment commentary (continued)

Paradox Interactive is a Swedish game developer established in 1999. The company has grown into one of the leading developers in highly detailed strategy games. After a strong run, recent share price action has been disappointing. However, the company continues to develop new games in its core niche while also extending their existing franchises (via add on downloadable content) which should be positive for shareholders over the longer term.

Market outlook and sub-fund strategy

The sub-fund continues to seek out unrecognised growth opportunities in stocks exposed to identified themes and growth tailwinds including onshoring, data centres and electrical grid upgrades. We believe that these themes combined with the identification of excellent company management teams can lead to positive shareholder outcomes. Core positions continue to be Atkore, Vertiv and BE Semiconductors which are exposed to these themes.

The sub-fund continues to have higher exposure than the benchmark to US and European industrials, with a focus on electrical equipment including the ongoing investment in the US and European electricity grid and the associated increase in construction and infrastructure investment.

We remain with a lower weight than the benchmark in sectors related to consumer spending as the consumer is still at risk from elevated interest and inflation rates; although we think that the peak in these is behind us. The sub-fund is in line with the benchmark in Financials and lower in Real Estate. Insurance holdings were increased in the second half of 2023. The largest holding in Financials is now Evercore; the independent investment bank founded in 1995 by Roger Altman. Evercore continues to highlight an improving outlook for the corporate activity market, while also looking to take market share from its key competitors. Eastgroup Properties, a niche leader in mid and small sized industrial distribution centres is the sub-fund's biggest position in Real Estate.

On a regional basis, the sub-fund has a higher weight to the benchmark in Europe and the UK with a slightly lower weight to the US given the relative valuation differences between the two regions. The US position increased during the last few months as we increased exposure to US industrials while reducing EU industrials. We expect that US industrial holdings will benefit further from the ongoing fiscal support from the US government.

^A Period from 17 October 2022 being the end of the launch period.

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each share class in the period. Where it is considered unsuitable to use the total expenses paid by each share class in the period to calculate the OCF because of material changes to the sub-fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the subfund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

SYNTHETIC RISK AND REWARD INDICATOR

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

^B The return after charges is calculated using the underlying investments bid prices.

^C On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^D These figures have been annualised.

Performance to 31 January 2024

	Six months	<u> 1 year</u>	<u>3 years</u>	<u>5 years</u>
IFSL Marlborough Multi Cap Income Fund	1.87%	0.11%	4.22%	4.95%
IA UK Equity Income Sector	2.67%	1.30%	23.09%	24.55%
FTSE All-Share Total Return (TR) Index	1.14%	1.90%	27.46%	30.42%

External Source of Economic Data: Morningstar (P Accumulation - quoted price to quoted price).

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

Performance statement

The price of the sub-fund at the end of July 2023 was 209.64p (based on the P Accumulation share class). The sub-fund's benchmark*, the FTSE All-Share Total Return (TR) Index, was 4198.02 at that time. Since then, the benchmark has fallen 0.6% to 4173.06 (29 January 2024).

The sub-fund price rose to 213.55p, up 1.87% in the half year to 31 January 2024. In comparison, the FTSE All-Share TR Index was up 1.14% to 8,936.56, up from 8836.24 over the same period.

Since inception in May 2011 to the end of January 2024, the sub-fund is up 113.55%** (based on the P Accumulation share class) compared with the FTSE All-Share TR Index up 110.82 % from 4,233.69 to 8,936.56 over the same period.

As such the sub-fund strategy has performed better than the benchmark in terms of total returns (i.e. income and capital returns combined) in the shorter term and longer term.

The sub-fund value (based on bid values including creations) at the end of July 2023 was £524m. As of the end of January 2024, the sub-fund value was £460m. The sub-fund experienced net outflows to total £59.7m.

Income distributions

The sub-fund was marked ex-dividend*** for 6 months to 31 January 2024. The income payment will be made at the end of March 2024. There are slight variations in income distribution across the range of share classes, but we focus on the 'P' Income share class, most held by investors. Please see the distributions table below.

Market review

Stock markets were generally volatile as they digested inflation data globally. Investors wanted to see evidence of inflation cooling before reducing their interest rate expectations. Although there will be a lag for this to play out and for rates to be cut – possibly only in the second half of 2024 - the prospect of this was enough to see prices rally in Q4 2023. As such the markets and sub-fund ended in modestly positive territory. However, without war, inflation and an energy crisis it could have been a year that saw double digit gains as stock prices were relatively low at the end of the previous year.

Sub-fund activity

More generally, the sub-fund exited names where higher gearing**** may otherwise have been tolerated or increased. We added to names where cashflow was better for dividend sustainability. Some lower dividend yield***** names were reintroduced or added to for potential growth in both capital and income, for example Discoverie and Solid State. Exposure to the property sector was reduced morSube due to weaker trading updates or dividend risk, for example Vistry. Similarly, we cut back on utilities where political risk was creating an 'own goal' i.e. higher uncertainty, for example Drax and National Grid. We increased exposure to some smaller companies where valuations appeared to be at a disconnect to their strong trading reports and solid management teams, for example Midwich and Keller.

Investment outlook

It has been well documented in the financial press now that inflation fears are cooling. The general direction for interest rates for the rest of 2024 is, therefore, likely to be down and this should act as a stimulus for the UK economy. There is a general election due in the second half and recent polls show that the Labour party are expected to defeat the incumbent Conservatives. Interest rate cuts and potential stimulus could start in the second half of the year with a follow on in Q1 2025. Overall, the backdrop for UK equities is better and a lower rate environment should help sentiment if the currency is stable. From a microeconomic basis, we continue to seek out businesses with strong balance sheets, improving free cashflow and potential to grow dividends.

IFSL MARLBOROUGH NO 2 OEIC IFSL MARLBOROUGH MULTI CAP INCOME FUND

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 January 2024

Investment commentary (continued)

Investment outlook (continued)

Whilst not guaranteed, the sub-fund remains well positioned for meeting its Investment Association UK Equity Income Sector 'yield test' objectives and currently offers a prospective yield of 4.87% (at the time of writing) compared with the FTSE All-Share TR Index yield at 3.92% (Financial Times 14 February 2024).

^{*} Benchmark – used for comparative purposes.

^{**} P shares were not launched in 2011 but we assume an adjustment factor in the price here.

^{***} Ex Dividend – the date which is used to decide which shareholders will receive a dividend payment.

^{****} Gearing – the ratio of a company's debt to the value of its shares.

^{*****} Dividend yield - measures profits of a company paid out to shareholders relative to the company's market value.

^A The return after charges is calculated using the underlying investments bid prices.

^B On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C These figures have been annualised.

^A The return after charges is calculated using the underlying investments bid prices.

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each share class in the period. Where it is considered unsuitable to use the total expenses paid by each share class in the period to calculate the OCF because of material changes to the sub-fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the subfund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

^B On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C These figures have been annualised.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Lower risk						Higher risk
Typically lower rew	vards				Туріс	cally higher rewards
1	2	3	4	5	6	7

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

The performance figures above are based on quoted prices and will, therefore, differ from the performance in the Comparative Table.

Capital at risk. Past performance is not a reliable indicator of future performance; the value of your investment and any income from it can go down as well as up. Performance returns are based on the net asset value with distributable income reinvested and take account of all ongoing charges, but not entry charges (if applicable). The past performance of this share class is calculated in sterling.

Investment commentary

Performance statement

During the six-month period from 1 August 2023 to 31 January 2024, the price of the sub-fund's P Accumulation shares rose 0.21%. This compared to a rise of 3.08% in the Investment Association UK Smaller Companies sector benchmark*.

Market review

From a macroeconomic perspective, the period saw many economists turn away from their call for recession and embrace the idea of a controlled economic slowdown (known as a "soft landing"). The interest rate cycle is significant, and the full effects of the most aggressive rate increasing cycle since the 1980s have not likely been felt yet owing to the rate increases taking time to have an impact. It is conceivable however that the global economic cycle finds itself moving from expansion to contraction.

The UK has since been confirmed by fourth quarter 2023 GDP figures to have gone into technical recession. Germany and several other of the larger Western European economies (including France, Italy and the Netherlands) have produced low economic growth figures, suggesting their economies could move into recession in the coming quarters. The reopening of the Chinese economy at the start of 2023 did not invigorate the Asian region or the global economy as much as predicted by many, and the Chinese domestic property market issues there remain.

Perhaps most importantly, the world's largest economy, the United States, shows some resilience although, with more detailed examination, it contains a mixed picture. Whilst unemployment figures remain low by historic standards, the Purchasing Manager Index (PMI), which shows the future path of economic growth, has been weak which suggests caution moving forward. The returns of the major US equity indices have been driven by a handful of names. Prices in shares in the so-called "Magnificent Seven" (Apple, Microsoft, Alphabet, Amazon, Nvidia, Tesla and Meta) account for the bulk of the gains in the US indices and have significantly outperformed the small and medium sized companies which can be found in the Russell 2000 Index.

It is a positive that inflation is on a downward trajectory, especially in the United States. Should this trend persist, global Central Banks will be able to cut interest rates. However, such cuts are very often associated with a slowing macroeconomic picture and historically the 'soft landing' scenario has happened less than a harsher outcome.

The good news is that UK equity market valuations are undeniably cheap. The UK equity market is cheap on an absolute basis, relative to developed markets and relative to its own history. Furthermore, share prices of UK small and mid-sized companies have not been this cheap relative to larger companies for decades. December marked the second consecutive month that the smaller company indices outperformed the FTSE 100 Index – something that had only happened three times out of the prior twenty-six months from September 2021.

Sub-fund performance review

The attraction of value has not gone unnoticed by trade buyers as well as private equity. Holdings bid for (including the share price move after the bid announcement) during the period included: product lifecycle management software company, Sopheon (104%); pub operator, City Pub Group (46%); gold mining company, Shanta Gold (6.7%); digital transformation services group, Kin & Carta (67%). It is our belief that bid activity will continue to be a feature in 2024.

Biggest winners during the period included Windward, Intercede, McBride, hVIVO, Mpac, Ashtead Technology, Sopheon, Journeo, Seeen, and City Pub Group.

Windward, the maritime data technology company, rose 110% during the period following a series of contract wins and positive updates throughout the period. Windward has been a beneficiary of global conflicts, in Russia/Ukraine and the Middle East as their platform flags security threats and offers intelligence and risk management to the entire maritime value chain. After a turbulent start as a publicly quoted company, we believe Windward is a compelling investment in an increasingly volatile world.

AUTHORISED INVESTMENT MANAGER'S REPORT

for the six month period ended 31 January 2024

Investment commentary (continued)

Sub-fund performance review (continued)

Largest losers during the period included Surface Transforms, GRC International, Saietta, Totally, Haydale Graphene Industries, Inspecs, Phoenix Copper, SDI Group, Tortilla Mexican Grill, and Bango.

Surface Transforms, the manufacturer of higher performance carbon ceramic automotive disc brakes, fell 72% during the period after a series of operational issues that impacted customer delivery schedules; the company subsequently raised capital to fund operations. Whilst disappointing, Surface Transforms has world class technology as evidenced by its high calibre customer list and new order wins. In addition, we believe the company has a plan to rectify the identified manufacturing issues.

Portfolio activity

Notable buys in the period included the sub-fund's participation in the following placings: Concurrent Technologies, Lifesafe, Surface Transforms, Thruvision and Various Eateries. The sub-fund also purchased shares in ActiveOps, Alpha Group and Kin & Carta.

Notable sells in the period included the reduction of positions in Ashtead Technology, Cerillion, Impax Asset Management and Kooth.

The sub-fund maintains its policy of principally focusing on growth orientated smaller companies with compelling characteristics from a valuation and/or business proposition perspective.

Investment outlook

The first half of the reporting period was evidently challenging for the sub-fund and UK smaller companies. However, we continue to believe in our portfolio companies and the inherent value they show. Moving forward, investors are becoming more positive as lower interest rate expectations mean financial conditions appear to be loosening. Recent inflation and economic growth figures suggest we may have seen the peak of the current interest rate cycle. As to whether central banks have engineered a so called 'soft landing' is to be confirmed but so far inflation is broadly trending lower, albeit with some small increases in recent weeks, and unemployment remains low. 2024 will likely see continued volatility but the macroeconomic picture appears more stable at this juncture, which could bode well for equities and small and mid-sized companies.

Whilst uncertainty remains, many portfolio companies across a range of industries have issued positive trading updates since the start of 2024 and share prices have risen in response; we are hopeful that strong fundamentals will be rewarded once again.

Lowest share price	187.39	200.54	219.52	174.18

^A The return after charges is calculated using the underlying investments bid prices.

Operating charges are normally the same as the Ongoing Charges Figures (OCFs) and are the total expenses paid by each share class in the period. Where it is considered unsuitable to use the total expenses paid by each share class in the period to calculate the OCF because of material changes to the sub-fund's charges an estimate will be calculated instead. The OCFs disclosed in the Key Investor Information Document (KIID) (available on IFSL's website, www.ifslfunds.com) give an estimate of future costs.

Direct transaction costs are the total charges for the period, included in the purchase and sale of investments in the portfolio of the subfund. These amounts are expressed as a percentage of the average net asset value over the period and the average shares in issue for the pence per share figures.

SYNTHETIC RISK AND REWARD INDICATOR (all share classes)

Lower ris	sk		Higher risk					
←								
Typically	lower rew	vards				Typic	cally higher rewards	
	1	2	3	4	5	6	7	l

This indicator aims to give you a measure of the price movement of the sub-fund based on past data. It uses historic returns over the last five years. If five years' data is not available, simulated data based on a representative portfolio is used.

The sub-fund has been measured as 6 because its investments have experienced high volatility in the past. During the period the synthetic risk and reward indicator has remained unchanged.

^B On 30 November 2023, The Investment Association amended the disclosure of fund charges and costs originally issued on the 2 July 2020. Consequently, we have excluded, where relevant, charges incurred by closed-ended vehicles such as investment trusts.

^C These figures have been annualised.
