This Key Information Document (KID) is issued by the manufacturer of the product, Alvarium Fund Managers (UK) Limited (the "Manufacturer"), a firm authorised and regulated by the Financial Conduct Authority in the United Kingdom.

Production Date: 09 September 2020.

WHAT IS THIS PRODUCT?

TYPE

Ordinary shares in LXI REIT plc (the "Company") which are denominated in Pounds Sterling. There is no maturity date for the shares and the only way of achieving value for your investment is to sell the shares to another party on the open market.

OBJECTIVES

The Company is a real estate investment trust targeting inflation-protected income and capital returns through a diversified portfolio of long-let and indexed-linked UK property assets. The properties are let, or pre-let, to institutional-grade tenants with strong financial covenants on leases with a long unexpired term. In addition, the properties have strong residual land-value characteristics, typically in defensive sectors. The Company borrows up to 35% of the gross asset value in order to enhance returns on investments. The Company aims to provide income to its investors through the payment of quarterly dividends, subject to the availability of sufficient funds.

INTENDED INVESTORS

This product is intended for retail investors who are prepared to take on a relatively high level of risk of loss to their original capital in order to get a higher potential return, and who plan to stay invested for at least 5 years. It is designed to form part of a portfolio of investments in Real Estate in the UK.

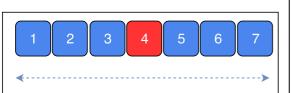

TERM

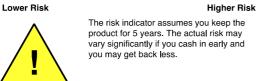

The Company has no fixed winding-up date.

WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

RISK INDICATOR

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because the Company is not able to pay you.

We have classified this product as 4 out of 7, which is a medium risk class. Poor economic conditions are likely to impact the performance of the Company and consequently the capacity of the product to provide returns to investors. This product does not include any protection from future market performance, so you could lose some or all of your investment.

PERFORMANCE SCENARIOS

The table below shows the returns you could receive over the next five years under different scenarios, assuming that you commit £10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The figures shown below include all the costs of the product itself but may not include all the costs that you pay to your broker, advisor or distributor. The figures do not take into account your personal tax position, which may also affect how much you get back.

					Recommended holding period
Scenarios			1 Year	3 Years	5 Years
Stress	What you might get bac	k after costs	£2,466	£3,449	£2,385
