## What are the risks and what could I get in return?

## Risk Indicator

The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for 5 years.
We have classified this product as class 2 out of 7 , which is a low risk class.

This rates the potential losses from future performance at a low level and poor market conditions are very unlikely to impact our capacity to pay you.
In addition to market risk and other risks that could be triggered, this product also carries counterparty risk, currency risk, interest rate risk, operational risk and liquidity risk. Please refer to the 'Risk Factor' section of the Prospectus for more detail.

Be aware of currency risk. You may receive payments in a different currency to your own, so the final return you will get depends on the exchange rate between the two currencies.

This product does not include any protection from future market performance so you could lose some or all of your investment.

|  | Average return each year | $6.02 \%$ | $4.95 \%$ | $4.62 \%$ |

This table shows the money you could get back over the next 5 years (recommended holding period), under different scenarios, assuming that you invest 10000 USD. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.
The figures shown include all the costs of the product itself, but may not include all the costs you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

## What happens if NB Global Floating Rate Income Fund Limited is unable to pay out?

This product is limited by shares as an investor you are liable for the product's debts up to the value of the assets of NB Global Floating Rate Investment Fund Limited. As an investor in this product you would not be able to make a claim to the Channel Islands Financial Ombudsman in the event that NB Global Floating Rate Investment Fund Limited is unable to pay out. There is no compensation or guarantee scheme in place which may cover potential losses.

## What are the costs?

The Reduction In Yield (RIY) shows what impact the total costs you pay will have on the return you might receive and may reduce the growth of your investment ("Impact on Return"). The total costs take into account one-off, ongoing and incidental costs. The amounts shown below are the cumulative costs of the product itself, for three different holding periods. The figures assume that you invest 10000 USD. The figures are estimates and may change in the future.

## Costs over Time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

| Investment $\mathbf{1 0} \mathbf{0 0 0}$ USD | If you cash in after 1 year | If you cash in after 3 years | If you cash in after 5 years |
