WHAT IS THIS PRODUCT?

Type

The Company is a UK closed-ended investment trust whose shares are traded on the London Stock Exchange.

Objectives

To provide shareholders with capital growth and income from a portfolio of predominately quoted mining and resource equities and mining, resource and other fixed interest securities (including convertible securities and bonds).

The Company has borrowed to purchase assets for the Company. This will magnify any gains or losses made by the Company.

The Ordinary Shares of the Company are bought and sold via markets. Typically, at any given time on any given day, the price you pay for a share will be higher than the price at which you could sell it.

The Shares of the Company are intended for investors who are able to make an informed investment decision based on this document and the most recent Annual and Half yearly Financial Reports. Investors should understand that there is no capital guarantee or protection (100 per cent of capital is at risk).

WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets. The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

We have classified this product as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions are likely to impact the products performance. This product does not include any protection from future market performance so you could lose some or all of your investment.

This table below shows the money you could get back over the next 5 years, under different scenarios, assuming that you invest £10,000. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back.

Legal Notice

All Investors should ensure that they have received and read the Prior-Investment Disclosure which is available from CQS at clientservice@cqsm.com. In common with most investment companies, the Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that a relatively small movement, down or up, in the value of a Company's assets will result in a magnified movement, in the same direction, of that NAV. The value of shares and the income from them can go down as well as up and you may get back less than the amount invested. Past performance is not a guide to the future. Exposure to a single country market increases potential volatility. There is no guarantee that the market price of shares in the Company will fully reflect their underlying Net Asset Value. As with all stock exchange investments, the value of investment company shares purchased will immediately fall by the difference between the buying and selling prices, the bid-offer spread. The NAV stated is calculated based on the bid prices of the portfolio holdings by the Administrator. An investment company should be considered only as part of a balanced portfolio. Under no circumstances should this information be considered as an offer or solicitation to deal in investments.
