Artemis High Income Fund (the "fund")

Class I quarterly distribution units, GBP [ISIN: GB00B2PLJN71]

The fund is managed by Artemis Fund Managers Limited.

Objectives and investment policy

Objective: The fund aims to achieve a higher than average initial yield, combined with the prospect of rising income and some capital growth over the long-term.

Investment policy:

- The emphasis of the fund will be investment in UK fixed-interest securities and preference shares but it can also invest in all economic sectors around the world.
- The fund has discretion in its choice of investments and is not restricted by the size of the company, the industry it trades in, or the geographical spread of the portfolio.

The fund may also invest in:

- Fixed interest securities which are investments (that could be issued by a company, a government or another entity) that pay a fixed level of income or interest.
- Preference shares, these are investments (issued by a company) that pay a fixed level of income. The income is paid as a dividend rather than interest and must be paid before any income from the company's other non-preference shares.
- Derivatives (financial instruments whose value is linked to the expected price movements of an underlying asset) to meet its investment objective, to protect the value of the fund, reduce costs and/or generate additional income.

Other information:

- **Dealing frequency:** You can buy and sell Monday to Friday, except on UK public holidays, each week. Transactions are processed at 12 noon UK time and we will include your instruction to buy or sell on the same day if it is received before that point.
- **Distribution policy:** This is a distribution class. Any income this fund receives will be paid out to you every three months.

Risk and reward profile

- The fund is in the category shown due to its historic volatility (how much and how quickly the value of shares in the fund have risen and fallen in the past). It may not be a reliable indication of the future risk profile of the fund.
- The risk category shown is not guaranteed and may change over time.
- A risk indicator of "1" does not mean that the investment is "risk free".

The risk indicator may not fully take into account the following risks and the following may affect fund performance:

- **Market volatility risk:** The value of the fund and any income from it can fall or rise because of movements in stockmarkets, currencies and interest rates, each of which can move irrationally and be affected unpredictably by diverse factors, including political and economic events.
- **Currency risk:** Some or all of the fund's assets may be invested in a currency other than the fund's accounting currency. The value of the assets, and the income from them, may decrease if the currency falls in relation to the accounting currency.
- **Bond liquidity risk:** The fund holds bonds which could prove difficult to sell. As a result, the fund may have to lower the selling price, sell other investments or forego more appealing investment opportunities.
- **Higher-yielding bonds risk:** The fund can invest in higher-yielding bonds (also known as sub-investment grade bonds), which have a greater risk of default by the issuer. The value of these bonds is more sensitive to changes in market conditions and interest rates. As a result, the fund may be subject to greater swings in value.
- **Credit risk:** Investments in fixed interest securities are subject to market and credit risk and will be impacted by movements in interest rates. Interest rate movements are determined by a number of economic factors, in particular market expectations of future inflation.
