- **Counterparty and Derivatives Risk:** As the fund may enter into derivative agreements, there is a risk that other parties may fail to meet their obligations leading to delays in receiving amounts due or less than is due. The use of derivatives may, through gearing, have a larger impact, positive or negative, than if only the underlying investments were held.
- **Credit and Currency Risk:** Fixed interest securities are affected by trends in interest rates and inflation. If interest rates go up the value of capital may fall and vice versa. Inflation will also decrease the real value of capital. The value of a fixed interest security is also affected by its credit rating. As the fund invests in overseas securities, exchange rate movements may increase or decrease the fund's value.
- **Emerging Market Risk:** Emerging markets may be less liquid and transparent, more volatile and subject to less oversight. There is a greater risk that other parties may default, causing loss to the fund.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in the 'Practical Information' overleaf.
