- The lowest category does not mean your investment is risk free.
- The Fund's investments are subject to normal market fluctuations and other risks inherent in equities.

Other Particular Risks: Below are certain risks that you should be aware of that may result in a loss or reduction in the value of your investments. These risks are not exhaustive. Potential investors should consult the Prospectus and their professional advisers before investing in the Fund.

Operational Risk: The Fund's operations depend on third parties, including the Fund's Administrator and Custodian, and the Fund may suffer disruption or loss in the event of their failure.

Equities Risk: Equity investments are subject to greater fluctuation in market value than other asset classes as a result of such factors as a company’s business performance, investor perceptions, stock market trends and several economic conditions. This may cause the Fund's share price to fluctuate.

Liquidity Risk: The Fund may invest in securities which may, due to negative market conditions, become difficult to sell or may need to be sold at an unfavourable price. This may affect the overall value of the Fund.

Counterparty Risk: There is a risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. The insolvency of any institution providing services such as the safekeeping of assets or acting as counterparty in respect of derivatives or other instruments may expose the Fund to financial loss.

Geographic Concentration Risk: The Fund’s assets are concentrated in the United States market which may lead to greater price fluctuations than if it were invested in securities of a broader geographic base.
