  - The Fund invests in companies in special situations which are considered to be undervalued by the wider market, and which the Manager perceives to have a catalyst (which could include a feature or market event) which when realised should result in an improved valuation of the company.
  - Over a market cycle (typically 3 to 5 years), the Fund will comprise on average 30 to 60 companies selected by the Manager following research of each company. At times, the Fund's portfolio may be concentrated.
  - The Fund may also invest in participatory notes, preference shares, cash, deposits, money market instruments (such as treasury bills) and collective investment schemes, including those which are managed or operated by the Manager or an associate of the Manager.
  - In addition, the Fund is also permitted to receive and hold warrants and convertible bonds as a result of corporate actions.

- Other information:**
- The Fund is actively managed as the Manager uses their expertise to select investments to achieve the Fund's objectives.

### RISK AND REWARD PROFILE

Lower risk ← → Higher risk  
Potentially lower rewards Potentially higher rewards

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is not guaranteed to remain the same and may change over time. It is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table above shows the Fund's ranking on the Risk and Reward Indicator.
- The Fund is in category 6 because it invests in company shares which are sensitive to variations in the stock market. The value of company shares can change substantially over short periods of time. Company shares are generally considered to be higher risk investments than bonds or cash.
- Even a fund in the lowest category is not a risk free investment.
- The value of your investment and any income you take from it may fall as well as rise and is not guaranteed. You might get back less than you invest. Further information on the risks of investing in this fund is contained in the Prospectus available at [www.legalandgeneral.com/reports](http://www.legalandgeneral.com/reports).
- The risk and reward indicator may not take account of the following risks of investing in the Fund:
  - The Fund could lose money if any institutions providing services such as acting as counterparty to derivatives or other instruments, becomes unwilling or unable to meet its obligations to the Fund.
  - Derivatives are highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains.
  - The return from this Fund is dependent on relatively few individual investments. This means that a fall in the value of an individual investment can have a major impact on the overall performance of the Fund.
  - The Fund may have underlying investments that are valued in currencies that are different from GBP. Exchange rate fluctuations will impact the value of your investment. Currency hedging techniques may be applied to reduce this impact but may not entirely eliminate it.

- **Dilution Adjustment:** on any day, the prices for buying or selling units in this Fund are the same. The Fund manager calculates a single price for this Fund based on the mid-point between the buying and selling prices of the Fund's assets. In certain circumstances, the Fund manager can adjust this price to account for whether there is more money going into or coming out of the Fund. This is called a 'dilution adjustment'. This can vary but as an example for this Fund we estimate 0.60% for purchases and 0.10% for sales at 01 March 2022. The amount of the dilution adjustment may differ in future.
