

Key Investor Information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

Market Access iStoxx Asia Index UCITS ETF (the "Fund")

A sub-fund of Market Access

Management Company: FundRock Management Company S.A.

ISIN: LU0259323235

Objectives and investment policy

The Fund's objective is to replicate the performance of the iSTOXX® Asia Index (the "Index").

The Index reflects the performance of companies from India, China, South Korea, Taiwan, Indonesia, Hong Kong, Thailand, Malaysia, Singapore and the Philippines. The weight of each of the countries in the Index is determined by their economic performance measured by gross domestic product (GDP). The maximum number of companies per country in the Index is twelve. India is represented through American Depository Receipts (ADRs), securities traded in the U.S. which represent shares in Indian companies. China is represented through so-called Red-Chips, companies whose primary business is in mainland China but are incorporated outside mainland China and listed in Hong Kong, and H-Shares which are companies incorporated in China and listed in Hong Kong. South Korea, Taiwan, Indonesia, Hong Kong, Thailand, Malaysia, Singapore and the Philippines are represented by shares listed on their respective primary stock exchanges. The Index includes the 40 largest companies (in terms of share price and number of shares in circulation). Companies are also screened by how heavily they are traded on exchange. The maximum weight per country in the Index is 30% and the maximum weight per company is 10%. The Index assumes that dividends of Index constituents are reinvested in the Index net of taxes.

In order to achieve its investment objective, the Fund will use a method of either physical or synthetic replication of the Index. The investment manager will decide between physical and synthetic replication on an ongoing basis, in the best interest of investors. At present, the Fund uses physical replication.

The Fund will replicate the Index physically by aiming to invest as far as possible in the constituents of the Index, in the same proportions in which they are included in the Index. In order to replicate the Index synthetically, the Fund will invest in a portfolio of securities (whose composition can be viewed at marketaccessetf.com) and enter into a derivative agreement (the "Swap Agreement") with a swap counterparty (the "Swap Counterparty"). Under the Swap Agreement, the Fund will exchange the performance of the portfolio of securities against the performance of the Index.

- The Fund does not pay dividends.
- You can buy or sell shares of the Fund through your stockbroker via the stock exchanges where the Fund is traded.

Other information:

- Long term holding period recommended.
- Information about the Index can be found at stoxx.com
- The indicative Net Asset Value (iNAV) can be viewed at deutsche-boerse.com

Risk and reward profile

- The risk and reward indicator is a measure of risk based on the past performance and simulated past performance of the Fund.
- The risk and reward indicator is calculated using historical and simulated data. Historical and simulated data may not be a reliable indication for the future.
- The Fund is rated 6 due to the nature of its investments, specifically the extent and frequency with which these investments have fallen and risen historically.
- The lowest category does not mean 'risk-free'.
- The risk and reward profile shown is not guaranteed to remain unchanged and may shift over time.
- This risk and reward indicator is not a complete measure of the risk of losing the money that you have invested.
- The Fund is neither capital-protected nor guaranteed. You may lose the entire amount that you have invested.

The indicator does not take into account the following risks of investing in the Fund:

Replication Risk: The Fund may be unable to hold the constituents of the Index in the same proportions in which they are included in the Index, and there is no guarantee that the Fund will track the performance of the Index.

Counterparty Risk: There is a risk that the Swap Counterparty may default and the Fund may lose a potentially unlimited portion of its value.

Concentration risk: Investment risk is concentrated in a single region. The value of the Fund is therefore affected by localised factors to a greater degree than other, broader based investments.

Emerging market risk: The Fund tracks an Index of emerging market shares. Emerging markets typically have a higher than average risk compared to investing in more established markets. Your investment may be affected by local market conditions including political, economic and regulatory developments in those countries.

Foreign exchange risk: Changes in foreign exchange rates may affect the value of your investment. The currencies of the Index constituents may be subject to greater fluctuations in value than the currency of more established economies.

Operational Risk: Failure of procedures or systems, as well as human error or external events associated with the Fund's management and/or administration, may cause losses to the Fund.

Liquidity Risk: Under certain circumstances your ability to buy or sell Fund shares via the stock exchanges where the Fund is traded may be limited.

Charges for this Fund

The charges you pay are used to pay the costs of running the Fund including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest

Entry charge None

Exit charge None

This is the maximum that might be taken out of your money before it is invested or before the proceeds of the investment are paid out.

Charges taken from the Fund over a year

Ongoing charge 0.65%

Charges taken from the Fund under certain specific conditions

Performance fee None

The ongoing charges figure is based on the Fund's charges for the year ending 31 December 2018. This figure is fixed at 0.65% of the Fund's net asset value. It excludes portfolio transaction costs.

Entry and exit charges do not apply when you buy or sell shares of the Fund through your stockbroker via the Stock Exchange but you may have to pay brokerage fees.

For more information about charges please see the "Fees and Commissions" section of the Fund's particulars in the prospectus which is available at marketaccessetf.com

Past Performance
