

Aberdeen Standard Asia Focus PLC

(formerly Aberdeen Asian Smaller Companies Investment Trust PLC)

Investment Trust

Performance Data and Analytics to 31 March 2019

Investment objective

The Company aims to maximise total return to shareholders over the long term from a portfolio made up predominantly of smaller quoted companies (with a market capitalisation of up to approximately US\$1.5 billion at the time of investment) in the economies of Asia and Australasia, excluding Japan by following the investment policy described below. When it is in shareholders' interests to do so, the Company reserves the right to participate in the rights issue of an investee company notwithstanding that the market capitalisation of that investee may exceed the stated ceiling.

Comparative benchmark

The Company does not have a benchmark. The Manager utilises two general regional indices, the MSCI AC Asia Pacific ex Japan Index (currency adjusted) and the MSCI AC Asia Pacific ex Japan Small Cap Index (currency adjusted), as well as peer group comparisons for Board reporting. It is likely that performance will diverge, possibly quite dramatically in either direction, from these or any other indices. The Manager seeks to minimise risk by using in depth research and does not see divergence from an index as risk.

For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to: <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf> The Morningstar Analyst Rating for Funds is a forward-looking analysis of a fund. Morningstar has identified five key areas crucial to predicting the future success of a fund: People, Parent, Process, Performance, and Price. The pillars are used in determining the Morningstar Analyst Rating for a fund. Morningstar Analyst Ratings are assigned on a five-tier scale running from Gold to Negative. The top three ratings, Gold, Silver, and Bronze, all indicate that our analysts think highly of a fund; the difference between them corresponds to differences in the level of analyst conviction in a fund's ability to outperform its benchmark and peers through time, within the context of the level of risk taken over the long term. Neutral represents funds in which our analysts don't have a strong positive or negative conviction over the long term and Negative represents funds that possess at least one flaw that our analysts believe is likely to significantly hamper future performance over the long term. Long term is defined as a full market cycle or at least five years. Past performance of a security may or may not be sustained in future and is no indication of future performance. Fund managers' report

Market and portfolio review

Despite continued worries over slowing global growth, Asian smaller companies extended gains in March on renewed hopes of a US-China trade deal and the Federal Reserve's accommodative stance. Notably, Chinese stocks rose after Beijing's pledge to support growth. Meanwhile, political developments drove Indian stocks, which rebounded after tensions with Pakistan dissipated, fuelling expectations that the incumbent BJP could win with a higher majority than anticipated.

In March, we exited Gujarat Gas after its share price rebounded. We also took the opportunity to tidy up a position in Malaysian palm oil plantation United Malacca and continued to reduce First Sponsor and YNH Property. Against these, we reinvested the proceeds in attractive, growth-oriented opportunities, such as Indian liquid petroleum gas (LPG) company Aegis Logistics, and agribusiness Godrej Agrovet, Vietnamese property developer Nam Long, Taiwan's Sporton International, among others.

Outlook

We remain circumspect about Asia's recent rebound. Growth is slowing globally, with companies turning cautious about short-term prospects. On trade, China and the US continue to pursue talks although both remain divided on key issues. Political risks also persist with elections in India and Indonesia looming. That said, financial conditions are easing thanks to central banks' dovish stance. Regional policymakers are also shoring up support for their economies. More broadly, structural drivers, including rising consumer spending and emerging technological trends, are still intact. Given such conditions, we think our bottom-up approach remains the right strategy. We prefer companies with good pricing power, competitive edges and solid balance sheets with healthy growth potential, which can deliver better shareholder returns over time. Your company's holdings are well positioned to benefit from long-term growth potential within the region.

The risks outlined overleaf relating to gearing, emerging markets, small companies and exchange rate movements are particularly relevant to this trust but should be read in conjunction with all warnings and comments given.

	2x

Assets/Debt (£m)

Gross Assets	467.8
Debt (CULS + bank loan) at nominal value	56.2
Cash	10.7

Capital structure

Ordinary shares	34,578,620
Treasury shares	7,139,012
Convertible Unsecured Loan Stock 2025 (CULS) at nominal value	£37,000,000

^c Expressed as a percentage of average daily net assets for the year ended 31 July 2018. The Ongoing Charges Figure (OCF) is the overall cost shown as a percentage of the value of the assets of the Company. It is made up of the Annual Management Fee and other charges. It does not include any costs associated with buying shares in the Company or the cost of buying and selling stocks within the Company. The Ongoing Charges figure can help you compare the annual operating expenses of different Companies.

^d 0.96% pa of the Company's market capitalisation, based on the closing Ordinary share price quoted on the London Stock Exchange multiplied by the number of Ordinary Shares in issue (excluding those held in treasury), valued monthly.

^e Calculated using the Company's historic net dividends and month end share price.

^f Net gearing is defined as a percentage, with net debt (total debt less cash/cash equivalents) divided by shareholders' funds.

^g The 'Active Share' percentage is a measure used to describe what proportion of the Company's holdings differ from the benchmark index holdings.

Important information

Aberdeen Standard Investments is a brand of the investment businesses of Aberdeen Asset Management and Standard Life Investments.

Risk factors you should consider prior to investing:

- The value of investments and the income from them can fall and investors may get back less than the amount invested.
- Past performance is not a guide to future results.
- Investment in the Company may not be appropriate for investors who plan to withdraw their money within 5 years.
- The Company may borrow to finance further investment (gearing). The use of gearing is likely to lead to volatility in the Net Asset Value (NAV) meaning that any movement in the value of the company's assets will result in a magnified movement in the NAV.
- The Company may accumulate investment positions which represent more than normal trading volumes which may make it difficult to realise investments and may lead to volatility in the market price of the Company's shares.
- The Company may charge expenses to capital which may erode the capital value of the investment.
- The Company invests in the securities of smaller companies which are likely to carry a higher degree of risk than larger companies.
- Movements in exchange rates will impact on both the level of income received and the capital value of your investment.
- There is no guarantee that the market price of the Company's shares will fully reflect their underlying Net Asset Value.
- As with all stock exchange investments the value of the Company's shares purchased will immediately fall by the difference between the buying and selling prices, the bid-offer spread. If trading volumes fall, the bid-offer spread can widen.
- The Company invests in emerging markets which tend to be more volatile than mature markets and the value of your investment could move sharply up or down.
- Specialist funds which invest in small markets or sectors of industry are likely to be more volatile than more diversified trusts.
- Yields are estimated figures and may fluctuate, there are no guarantees that future dividends will match or exceed historic dividends and certain investors may be subject to further tax on dividends.
