*The overall rating for a fund, often called the ‘star rating’, is a third party rating derived from a quantitative methodology that rates funds based on an enhanced Morningstar™ Risk-Adjusted Return measure. ‘Star ratings’ run from 1 star (lowest) to 5 stars (highest) and are reviewed at the end of every calendar month. The various funds are ranked by their Morningstar™ Risk-Adjusted Return scores and relevant stars are assigned. It is important to note that individual shareclasses of each fund are evaluated separately and their ratings may differ depending on the launch date, fees and expenses relevant to the share class. In order to achieve a rating the share class of a fund must have a minimum three-year performance track record.

[§]The Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.
^{§§}The Adjusted yield is calculated in the same way, however, as the charges of the share class are deducted from capital rather than income, it shows the level of yield had these charges been deducted from income. The effect of taking expenses from capital is to increase the income payable whilst reducing capital to an equivalent extent and may constrain future capital and income growth. Both yields do not include any preliminary charge and investors may be subject to tax on their distributions. The yield information has been calculated as at 01.31.24.

General risks

The value of this investment, and any income generated from it, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. The Fund's objectives will not necessarily be achieved and there is no guarantee that this investment will make a profit; losses may be made there is risk of loss of principal. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term. If the currency of the share class you invest in differs from your domestic currency, your returns may increase or decrease as a result of currency fluctuations. For Inc-2 and Inc-3 shares classes, expenses are charged to the capital account rather than to income, so capital will be reduced. This could constrain future capital and income growth. Income may be taxable.

Specific fund risks

Currency exchange: Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

Derivatives: The use of derivatives is not intended to increase the overall level of risk. However, the use of derivatives may still lead to large changes in value and includes the potential for large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

Emerging market: These markets carry a higher risk of financial loss than more developed markets as they may have less developed legal, political, economic or other systems.

Equity investment: The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. insolvency), the owners of their equity rank last in terms of any financial payment from that company.

Geographic / Sector: Investments may be primarily concentrated in specific countries, geographical regions and/or industry sectors. This may mean that, in certain market conditions, the value of the portfolio may decrease whilst more broadly-invested portfolios might grow.

Liquidity: There may be insufficient buyers or sellers of particular investments giving rise to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than might be anticipated.
