Fund Objectives

The aim of this Fund is to provide medium to long-term capital growth with a return (net of fees) greater than the MSCI All Country World Index (the "Index") on a rolling three to five year basis. The return of the Index is subject to the performance of the relevant stock market and therefore the Fund may not provide capital growth in all market conditions.

Investment Horizon

This Fund may not be suitable for investors who plan to withdraw their contribution within five years.

Risk Characteristics

The risk category is calculated using historical performance data and may not be a reliable indicator of the Fund's future risk profile.

The risk category shown is not guaranteed and may shift over time. The lowest category does not mean risk free.

Why is this Sub-Fund in this category?

The capital of the Sub-Fund is not guaranteed. The Sub-Fund is invested in financial markets and uses techniques and instruments which are subject to some levels of variation, which may result in gains or losses.

Additional Risk

Counterparty Risk: failure by any counterparty to a transaction (e.g. derivatives) with the Fund to meet its obligations may adversely affect the value of the Fund. The Fund may receive assets from the counterparty to protect against any such adverse effect but there is a risk that the value of such assets at the time of the failure would be insufficient to cover the loss to the Fund.

Derivatives: derivatives can be more volatile than the underlying asset and may result in greater fluctuations to the Fund's value. In the case of derivatives not traded on an exchange they may be subject to additional counterparty and liquidity risk.

Operational Risk: the Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of the Fund's assets.

Risk linked to Method and Model: attention is drawn to the fact that the Fund's strategy is based on the utilisation of a proprietary share selection model. The effectiveness of the model is not guaranteed and the utilisation of the model may not result in the investment objective being met.

Emerging Market Risks: emerging markets or less developed countries may face more political, economic or structural challenges than developed countries. As a result, investments in such countries may cause greater fluctuations in the Fund's value than investments in more developed countries. In addition the reliability of trading, settlement and custody systems in some emerging market countries may not be equal to more developed countries and result in greater operational and liquidity risk.

Currency Risk: the Fund holds investments denominated in currencies other than the base currency of the Fund. As a result, exchange rate movements may cause the value of investments (and any income received from them) to fall or rise affecting the Fund's value.

Further explanation of the risks associated with an investment in this Fund can be found in the prospectus.

Subscription Redemption

Your orders to buy, sell or transfer shares in the Fund, must be received by the Administrator by 12 noon on any working day to receive that day's Fund price. Please note that if your order is placed by an intermediary or Financial Adviser, they may require extra processing time. The Net Asset Value of this Fund is calculated on a daily basis.

Minimum initial investment: £100,000
Minimum subsequent investment: £5,000

ESG Metrics Definition

The ESG absolute rating is based on a proprietary scoring methodology. If the fund has one tree (5 trees), it means that it is in the lowest (highest) ESG absolute rating category. For more information on the methodology, please visit <https://www.axa-im.com/responsible-investing>.

ESG relative rating is calculated as the difference between the ESG absolute rating of the portfolio and the ESG absolute rating of its benchmark. If ESG Relative rating is positive (negative), this means that the portfolio has a higher (lower) ESG absolute rating than the benchmark.

CO2 relative intensity is calculated as the difference between the CO2 intensity of the fund (expressed in tCO2/M€ Revenues) and the one of the benchmark.

If CO2 Relative intensity is green, it means that the intensity of the portfolio is lower than that of the benchmark. If CO2 Relative intensity is orange, it means that the intensity of the portfolio is higher than that of the benchmark. If CO2 Relative intensity is yellow, it means that the intensity of the portfolio is similar than that of the benchmark.

ESG indicators are for informational purposes only. The portfolio has neither statutory nor contractual ESG objectives.

Past performance is not a guide to current or future performance, and any performance or return data displayed does not take into account commissions and costs incurred when issuing or redeeming units. The value of investments, and the income from them, can fall as well as rise and investors may not get back the amount originally invested. Exchange-rate fluctuations may also affect the value of their investment. Due to this and the initial charge that is usually made, an investment is not usually suitable as a short term holding. Commissions and costs have an adverse effect on the performance of the fund.

Additional Information (Continued)

The Fund referenced herein has not been registered under the United States Investment Company Act of 1940, as amended, nor the United States Securities Act of 1933, as amended. None of the shares may be offered or sold, directly or indirectly in the United States or to any US Person unless the securities are registered under the Act, or an exemption from the registration requirements of the Act is available. A US Person is defined as (a) any individual who is a citizen or resident of the United States for federal income tax purposes; (b) a corporation, partnership or other entity created or organized under the laws of or existing in the United States; (c) an estate or trust the income of which is subject to United States federal income tax regardless of whether such income is effectively connected with a United States trade or business. In the United States, this material may be distributed only to a person who is a “distributor,” or who is not a “U.S. person,” as defined by Regulation S under the U.S. Securities Act of 1933 (as amended).

For the purposes of presenting the breakdown by country, sector, principal exposures and active strategies, equities and similar instruments relating to a single company (ADRs, GDRs, RSPs, rights, etc.) are grouped in order to form a single exposure for the said company.

The geographical breakdown is based on the country classification as published by the index provider (or the main index provider in case of a composite benchmark). The second available source is the Country ISO from Bloomberg (or Ultimate Country of risk for Emerging fund).

Annual turnover rate : Sum the last 12 monthly results to obtain the turnover rate over 1 rolling year, calculated according to the following formula: $(\text{abs}(\text{purchase}) + \text{abs}(\text{sale}) - \text{abs}(\text{subscription} - \text{redemption})) / (2 * \text{average AUM})$.

Purchase and sale exclude derivatives, short term instruments and some corporate actions.

Subscription and redemption are netted on a monthly basis, impact of inflows and outflows can result in negative turnover which does not reflect portfolio turnover, therefore annual turnover has a floor of 0.
