Objective and investment policy summary

The Fund aims to generate a high level of income, with the opportunity for capital gain, primarily through investment in a diversified portfolio of Investment Grade fixed and floating rate securities, normally denominated in U.S. Dollars and issued by governments, institutions and corporations in both developing and developed countries. When judged appropriate, the portfolio may be held in fixed interest securities denominated in currencies other than U.S. Dollars, with the relevant currency exposure hedged back into U.S. Dollars.

*The overall rating for a fund, often called the 'star rating', is a third party rating derived from a quantitative methodology that rates funds based on an enhanced Morningstar™ Risk-Adjusted Return measure. 'Star ratings' run from 1 star (lowest) to 5 stars (highest) and are reviewed at the end of every calendar month. The various funds are ranked by their Morningstar™ Risk-Adjusted Return scores and relevant stars are assigned. It is important to note that individual shareclasses of each fund are evaluated separately and their ratings may differ depending on the launch date, fees and expenses relevant to the share class. In order to achieve a rating the share class of a fund must have a minimum three-year performance track record.

†The performance quoted is of actual performance post share class launch date and simulated performance pre share class launch date. Due to a change in investment focus, performance prior to 23.03.09 was achieved under different circumstances. The simulated performance is based on the Ninety One US Dollar High Income Bond / High Income Bond (U.S. Dollar) Fund that was launched on 21.06.00 and then changed its name and investment objective on 23.3.09 and takes into account any difference in fees between the share classes.

§The Yield reflects the amounts that may be distributed over the next 12 months as a percentage of the Fund's net asset value per share, as at the date shown, based on a snapshot of the portfolio on that day.

§§The Adjusted yield is calculated in the same way, however, as the charges of the share class are deducted from capital rather than income, it shows the level of yield had these charges been deducted from income. The effect of taking expenses from capital is to increase the income payable whilst reducing capital to an equivalent extent and may constrain future capital and income growth. Both yields do not include any preliminary charge and investors may be subject to tax on their distributions. The yield information has been calculated as at 12.31.23.

Performance data source: © Morningstar, dates to 12.31.23, NAV based, (net of fees, excluding initial charges), total return, in US dollars. The Fund is actively managed, any index shown is for illustrative purposes only. Performance would be lower had initial charges been included as an initial charge of up to 5% may be applied to your investment. This means that for an investment of \$1,000, \$950 would actually be invested in the Fund. Due to an investment objective and policy change on 31 May 2016, performance shown prior to this date was achieved under different circumstances.

General risks

The value of this investment, and any income generated from it, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. The Fund's objectives will not necessarily be achieved and there is no guarantee that this investment will make a profit; losses may be made there is risk of loss of principal. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term. If the currency of the share class you invest in differs from your domestic currency, your returns may increase or decrease as a result of currency fluctuations. For Inc-2 and Inc-3 shares classes, expenses are charged to the capital account rather than to income, so capital will be reduced. This could constrain future capital and income growth. Income may be taxable.

Specific fund risks

Charges from capital: Expenses are charged to the capital account rather than to income, so capital will be reduced. This could constrain future capital and income growth. Income may be taxable.

Default: There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivatives: The use of derivatives may increase overall risk by magnifying the effect of both gains and losses leading to large changes in value and potentially large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

Interest rate: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates rise.
