

First Trust Indxx Innovative Transaction & Process UCITS ETF

The Fund is a passively managed index-tracking fund that seeks to provide investors with investment results that correspond generally to the price and yield of the Indxx Blockchain Index (the "Index"), before fees and expenses. The rules-based Index is designed to track a global universe of companies that are either actively using, investing in, developing, and/or have products poised to benefit from blockchain technology.

Fund performance is the performance of the share class since its inception, shown net of fees including re-invested dividends in the base currency of the share class which is in USD. Performance can go up as well as down, and investors may lose some or all of their capital. Returns may increase or decrease as a result of currency and exchange rate fluctuations. Please refer to the 'Risks' section on Page 3 for more details on risks associated with an investment in the fund.

¹The ongoing charges figure is based on the Fund's annual management fee, whereby the Investment Manager is responsible for the costs involved in running the Fund. In the event that the Fund's running costs exceed the stated figure the Investment Manager shall pay the excess from its own assets. The ongoing charges figure excludes portfolio transaction costs. Details of the transaction costs are available from your broker or financial advisor and at www.ftgportfolios.com. The figure may vary from year to year.

- The Indxx Blockchain Index tracks the performance of exchange-listed companies across the globe that are either actively using, investing in, developing, or have products that are poised to benefit from blockchain technology. The index seeks to include only companies that have devoted material resources to the use of blockchain technologies.
- Each security in the Index must meet certain eligibility criteria based on liquidity, size and trading minimums.
- Eligible securities are classified into the following three categories: i. Tier One: Active Enablers – Companies actively developing blockchain technology products or systems for their own internal use and for the sale and support of other companies; companies that are direct service providers for blockchain technology; or, companies that have business models that rely on delivering products or services that use blockchain technology. Companies in this category are assigned a score of 1; ii. Tier Two: Active Users – Companies that are using blockchain technology that is generally supported by an Active Enabler or have at least one use or test case of using blockchain technology. Companies in this category are assigned a score of 2; iii. Tier Three: Active Explorers – Companies that have publicly disclosed that they are active in exploring the incorporation of blockchain technology into their business or have a press release on their website or a news article stating that they have started working on the blockchain technology space. These companies do not have at least one use case or test case on blockchain technology and are not currently directly incorporating blockchain technology into their business. Companies in this category are assigned a score of 3.
- Companies with a score of 1 or 2 are selected for the index and weighted with Active Enablers receiving 50% and Active Users receiving 50%. The selected companies are weighted equally within each category. The index is capped at 100 constituents.
- A maximum weighting of 0.50% is applied to constituents in the Active Enabler category with a market cap of less than \$500 million, as well as a 20 day and 3 month average daily turnover volume of less than \$3 million.
- The Index is reconstituted and rebalanced semi-annually.

Risks

- **CAPITAL AT RISK.** The Fund may not achieve its investment objective and the value of shares in the Fund may fall. Investors may not get back the amount originally invested.
- Neither First Trust Global Portfolios Limited nor any of its affiliates, guarantees the performance or the future returns of the Fund.
- The Fund is subject to blockchain technology risk. Blockchain technology is an entirely new and relatively untested technology. The risks associated with blockchain technology may not emerge until the technology is widely used. Blockchain systems could be vulnerable to fraud, particularly if a significant minority of participants colluded to defraud the rest. Access to a given blockchain requires an individualised key, which, if compromised, could result in loss due to theft, destruction or inaccessibility. There is little regulation of blockchain technology other than the intrinsic public nature of the blockchain system.
- Any future regulatory developments could affect the viability and expansion of the use of blockchain technology. Because blockchain technology systems may operate across many national boundaries and regulatory jurisdictions, it is possible that blockchain technology may be subject to widespread and inconsistent regulation. Blockchain technology is not a product or service that provides identifiable revenue for companies that implement, or otherwise use it. Therefore, the values of the companies included in the Indxx Blockchain Index may not be a reflection of their connection to blockchain technology, but maybe based on other business operations. Currently, blockchain technology is primarily used for the recording of transactions in digital currency, which are extremely speculative, unregulated and volatile. Problems in digital currency markets could have a wider effect on companies associated with blockchain technology. Blockchain technology also may never be implemented to a scale that provides identifiable economic benefit to the companies included in the Index. There are currently a number of competing blockchain platforms with competing intellectual property claims. The uncertainty inherent in these competing technologies could cause companies to use alternatives to blockchain. Finally, because digital assets registered in a blockchain do not have a standardized exchange, like a stock market, there is less liquidity for such assets and greater possibility of fraud or manipulation.
- There is no assurance that the Index will continue to be calculated and published on the basis described in the prospectus and relevant supplement. In addition, the Fund's return may not match the return of the Index.
- See also the description of the risks applicable to the Fund in "Risk Factors" in the prospectus and relevant supplement.
