Glossary

[†]The overall rating for a fund, often called the 'star rating', is a third party rating derived from a quantitative methodology that rates funds based on an enhanced Morningstar™ Risk-Adjusted Return measure. 'Star ratings' run from 1 star (lowest) to 5 stars (highest) and are reviewed at the end of every calendar month. The various funds are ranked by their Morningstar™ Risk-Adjusted Return scores and relevant stars are assigned. It is important to note that individual shareclasses of each fund are evaluated separately and their ratings may differ depending on the launch date, fees and expenses relevant to the share class. In order to achieve a rating the share class of a fund must have a minimum three-year performance track record.

[‡]The performance quoted is of actual performance post share class launch date and simulated performance pre share class launch date. The simulated performance is based on the oldest share class since fund launch adjusted to reflect the fees of the share class being simulated. Due to a change in investment objective and name change, we are unable to show performance prior to 31.05.13.

[§]The Yield reflects the amounts that may be distributed over the next 12 months as a percentage of the Fund's net asset value per share, as at the date shown, based on a snapshot of the portfolio on that day.

^{§§}The Adjusted yield is calculated in the same way, however, as the charges of the share class are deducted from capital rather than income, it shows the level of yield had these charges been deducted from income. The effect of taking expenses from capital is to increase the income payable whilst reducing capital to an equivalent extent and may constrain future capital and income growth. Both yields do not include any preliminary charge and investors may be subject to tax on their distributions. The yield information has been calculated as at 12.31.21.

Performance data source: © Morningstar, dates to 12.31.21, NAV based, (net of fees, excluding initial charges), total return, in US dollars. The Fund does not track an index, any index shown is for illustrative purposes only. Performance would be lower had initial charges been included as an initial charge of up to 5% may be applied to your investment. This means that for an investment of \$1,000, \$950 would actually be invested in the Fund.

General risks

The value of this investment, and any income generated from it, will be affected by changes in interest rates, general market conditions and other political, social and economic developments, as well as by specific matters relating to the assets in which they invest. The Fund's objectives will not necessarily be achieved and there is no guarantee that this investment will make a profit; losses may be made there is risk of loss of principal. This Fund may not be appropriate for investors who plan to withdraw their money within the short to medium term. If the currency of the share class you invest in differs from your domestic currency, your returns may increase or decrease as a result of currency fluctuations.

Specific fund risks

Charges from capital: For Inc-2 and Inc-3 shares classes, expenses are charged to the capital account rather than to income, so capital will be reduced. This could constrain future capital and income growth. Income may be taxable.

Commodity-related investment: Commodity prices can be extremely volatile and losses may be made.

Currency exchange: Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

Default: There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

Derivatives: The use of derivatives may increase overall risk by magnifying the effect of both gains and losses leading to large changes in value and potentially large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

Emerging and Frontier market (inc. China): These markets carry a higher risk of financial loss than more developed markets as they may have less developed legal, political, economic or other systems.

Equity investment: The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. insolvency), the owners of their equity rank last in terms of any financial payment from that company.

Government securities exposure: The Fund may invest more than 35% of its assets in securities issued or guaranteed by a permitted sovereign entity, as defined in the definitions section of the Fund's prospectus.

Interest rate: The value of fixed income investments (e.g. bonds) tends to decrease when interest rates rise.
