## Key risks

Exchange rate changes may cause the value of underlying overseas investments to go down as well as up.

External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds and income could decline at the same time, or fluctuate in response to the performance of individual companies and general market conditions.

This Company may utilise gearing (borrowing) which will exaggerate market movements both up and down.

This Company may also invest in smaller companies which may increase its risk profile.

The share price may trade at a discount to the Net Asset Value of the Company.

The single market in which the Company primarily invests, in this case the US, may be subject to particular political and economic risks and, as a result, the Company may be more volatile than more broadly diversified companies.

## Performance information

Source: J.P. Morgan Asset Management/Morningstar. Net asset value performance data has been calculated on a NAV to NAV basis, including ongoing charges and any applicable fees, with any income reinvested, in GBP.

NAV is the cum income NAV with debt at fair value, diluted for treasury and/or subscription shares if applicable, with any income reinvested. Share price performance figures are calculated on a mid market basis in GBP with income reinvested on the ex-dividend date. The performance of the company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Indices do not include fees or operating expenses and you cannot invest in them.

Prospective dividend yield is for the investment trust's current

financial year. It is indicative only and based on the latest month end mid-market price and the declared and net prospective dividends for the current financial year.

## Holdings information

Market Cap excludes cash.

## Definitions

**FE Crown rating** are quantitative ratings ranging from one to five designed to help investors identify funds which have displayed superior performance in terms of stockpicking, consistency and risk control.

FE Crown Fund Ratings are however purely quantitative and backward looking, and, as such, cannot offer any certainty about the future.

FE Trustnet crown rating as at 30 April 2022.

**Benchmark comparison** Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

**Gearing** Gearing represents the excess amount above shareholders' funds of total investments (excluding liquidity fund holdings) expressed as a percentage of the shareholders' funds. If the amount calculated is negative, this is known as a "net cash" position.

**Discount/Premium** If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The discount/premium is shown as a percentage of the NAV.

**NAV** The value of investment and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

**Cash** A company's net exposure to cash / cash equivalents [includes investment in liquidity funds and treasury stocks if held] expressed as a percentage of shareholders funds after any offset against its gearing.
