Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. The Fund provides exposure to commodities. Commodity prices react, among other things, to economic factors such as changing supply and demand relationships, weather conditions and other natural events, the agricultural, trade, fiscal, monetary, and other policies of governments and other unforeseeable events all of which may affect your investment.

The Fund will use financial contracts (known as derivatives) to try to reduce the effect of currency fluctuations between the currency of its assets and the currency of the shares. This may not be effective and may prevent the Fund from benefitting from an increase in value of (or expose a Fund to the decrease in value of) a particular currency.

The Fund will enter into a derivative with a counterparty. If the counterparty fails to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.
